I didn't use the word 'arsehole', but it is up to you to decide if you wish to be simple-minded or kind to a fault, I have 40 years experience, and still devote large part of my time trying to help fellow amateurs; scanning or copying circuit diagrams which many of you need

this can be easily seen at http://www.circuitarchive.co.uk/heath.htm and http://bama.sbc.edu/

>Not ALL people in this world are assholes! (in your
>opinion)

I have many friends in America, Germany, England, Denmark, Sweden and Norway. Among friends we decide it makes more pleasure to give than to sell the equipment. Last week I sent 300 lbs weigth special parts for EME to some friends, and a month ago I gave a Texscan sweeper and 50MHz oscilloscope to another friend. Just preparing a microwave amplifier to be sent as a present to a German friend

Your American ideas about selling and buying all sorts of rubbish via newsgroups fortunately do not apply so much elsewhere, like in Europe.

Good luck "Mr Dave"!

Hi Fellas;
I have for SALE:
Dentron Clipperton-l Amplifier, covers 160 thru 10 meters, 4- 572B amplifier tubes, all original Dentron Brand, This amp is like new with very little use.
Easy drive = 1500 watts output all bands, 15 & 10= 1200watts.
Physical condition is Excellent.
I do not presently have a manual for it.
Price is $650 PPD by UPS.
Ameritron makes a version of this amp at $2000, so which makes a better deal?

Thanks es 73.....RICH-WA2RQY RLUCCH2098@aol.com

ITT/Mackay 3010-B rcvr. Covers .7 to 30 mhz continuous. It does NOT have the 500hz or 3.1khz filter, only the 6kz. Sounds great though, even on SSB. Operationally very good although a few of the switches are scratchy. The tape drive is a bit loose. If you turn the vfo too fast the tape will come off of the spool and you have to reset it up. I think one of the springs is loose that is used to hold it down. I really like the rcvr but the tape dial drives me nuts. No cabinet. No extra holes in the front panel or chassis anywhere. This was a rack mount unit used on a commercial research vessel from one of the universities. Front panel is decent, around a 7 out of 10. Chassis could use a good cleaning. No severe corrosion. As I type this I am listening to the rcvr on 3.840 LSB and it really sounds great. BUT, this is not my dream rcvr so I would like to trade it for either an Icom R-70 rcvr or an HF amp. Prefer local pick up so you can test it but will ship via UPS ground if I have to. We will have to work that out. I have a very good copy of the manual. This thing is rock stable after a 30 min warmup.

So the bottom line is a trade for an Icom R-70 or an Hf amp. I can throw in some $$ depending on what amp you have. Will consider one with or without tubes, depends on what you have.

Serial number on the rcvr is M0055 so it is an early one.

No I do NOT want to sell, trade only. Sorry, no pictures available.

Source record: 68768

Do you want your Jonson 500 to look like new??

I ran into a gentleman (Dee- W4PNT) at the Timonium hamfest last weekend that refinishes Johnson Rangers and Valiants. His work is excellent and the finished product actually looks better than original. The silkscreening looks great and the color match seems to be right on! I asked him about doing my 500 but he said that he needs to do a minimum of three to start doing 500's. I have two definites- Myself and one other owner. We need one more definite. If you are not shy about spending a few bucks on your 500 to make it look like new email me.
Thanks very much,
Jim

From: k9sqg@aol.com
Message-ID: <20000401121554.08155.00000359@ng-fp1.aol.com>
Source record: 68778

Have a stand alone terminal for sale. Sends and receives CW, RTTY, and who knows what else. Includes the manual (not sure if it is original or copy). Haven't tried the unit out yet but cosmetically it is in excellent condition. Part of an estate sale, all the other gear worked so I'm assuming this will too. All you need is an external source of 12vdc, and a composite monitor. Both of these are readily available at hamfests or surplus houses quite reasonably ($5-20). This is a stand alone unit and does not require one to tie up a computer. Asking $75 which is a shipped price, CONUS only.

Thanks for reading the ad and 73.

Evan

27. FS Astatic D104&Amp base

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-01 00:00:00 UTC
From: ke6hlw@aol.com
Message-ID: <20000401182801.20221.00000466@ng-fz1.aol.com>
Source record: 68784

For Sale Astatic Model D-104 microphone with T-UG8 amplified base. Mic and stand are in average condition, no battery leakage, and the schematic for the amplifier is still on the inside base cover. Has a 4-pin plug at the cord end, but is not wired up? I have no way to test the unit, so is sold as is. (I did Ck it with VTVM and shows continuity and did ck it out with my 'oscope, and the element and amp works). There a two screws missing; one on the back of the microphone, the other on the base that holds the cover on. There are no dents nor gouges, just normal ware. $50.00 U ship from: 92019-1171 any questions, Pse E mail: KE6HLW@aol.com Tnx Bill

Hate to burst your bubble, but I don't have a filter in my web
browser. Certainly I could spend some money for a new one or download it
from Netscape, but the last three times I've done things like that, I've
had nothing but problems. Could be Windows 95, could be the other
software, in either case, the computer works fine at the moment and I'm
not going to rock the boat! HAHAHA!
I think the point of this argument is do we respect the Charter or
not. Does it mean anything or is it to be discarded as being worthless?
I can't speak for everyone, but my parents raised me to repect the
wishes of others. If this newsgroup or any other one was established to
be a discussion group and not for the auctioning or selling of
equipment, then why is it so hard to respect that and go to a newsgroup
that has been set up for that purpose?
Some may answer that by saying "I'm not hurting anyone" or "Use a
filter". Seems logical, however we didn't establish this group, we are
enjoying its service for free and some respect would be in order. I'm
amazed that nobody in "authority" has said anything. Is there someone
overseeing this group that "manages" this that can shed some light on
this subject?

Curious as to what draws one in to an interest in the Collins S-Line. Does it still perform as well as some of the new Japanese kit on the market after a major overhaul or is it purely, as I suspect, that it is better made and more interesting to operate even if its performance has dropped off dramatically after some 40 years. Perhaps the Drake 4C line up would out perform the Collins due to its age. Can't somehow get excited about an IC756 or an FT920 etc, etc. Comments awaited with interest.

It seems not, actually. The original people who set up the newsgroup
are long gone, and apparently a newsgroup's charter can't be revised
once it's written. <A poor way to run a railroad, thinks me...>

There has been some discussion of this in the British magazine "Short
Wave Magazine" lately. The current issue draws some comparisons betweeen
the 51S-1, the NRD545 and a Harris RF-590A (an _expensive_ professional
receiver). On medium Wave, at least, the reviewer - who has professional
test equipment, and knows how to use it - considers the 51S-1 performance
as good as the Harris, and both of them superior to the NRD545. Of course
this is not ham gear, but the Collins 75S- series should be as good as the
51S, as they are basically the same design. The reviewer has promised to
do a more detailed comparison of receiver performance in a future issue,
should be very interesting. For lovers of professional receivers, he has
already tested the Racal 1792 and Collins HF-2050.
Transmitters are another issue, I've not tried an old Tx myself...

For Sale:

Turner PLUS THREE desk microphone. Amplified, with locking PTT bar.
Very good condition. Will sell for $45.00

Headphones with boom microphone.
Jensen Model JMP-41
Headset Response is 20 Hz - 20 kHz
6' Cord with mini stereo plug.
Microphone is Low-Z Condenser type with 2.2 k-ohm impedance.
Response 30 Hz - 16 kHz

Durable and comfortable design with padded ear-pieces, ideal for
communications applications.

Brand new in box. White color.
Great for mobile HF or VHF operating. Think SAFETY!
Also great for extended rag-chews, contesting etc.
No PTT, but has standard connectors - 1/8" mini-style.
Will also work well with computers(R)
Normally $29.95 - New in box $20.00 plus shipping

Excellent low impedance dynamic BALL microphone - 600 ohms.
Recoton DMK-200 pro series dynamic microphone, unidirectional
with ball/screen type end. Black metal finish. 80 Hz - 10 kHz response
- has 10 foot cord. Ideal for Communications or Vocalists / Public
Address etc.

New In Box. Will sell for $15.00 plus shipping

For Sale:

120V primary
35V at 2A transformer mounted on a neat little chassis:
10" X 5" X 3" with only a few small holes. No other parts mounted.
Would make a great project chassis.
Will sell for $12.00

110/220V Primaries - 1225V CT at 215 mA and extra taps for
1185V CT at 200mA sec $44.00

115V Primary - 1000V CT at 300 mA $45.00

115V primary - 920V CT at 300 mA (will supply up to 500 mA DC) $48.00

920V at 700 mA upright mounting $59.00

National Co. 5 Henry choke / autotransformer A-17847
Q is 10 at 100 cps. Rated for 1 mA DC. Test voltage is
500 volts DC.
Has taps for +/1 2% 40% 95% 100$ 105% and encased in a
neat-looking gray case 1.5" X 1.5" X 2.5" tall.
Will sell for $10.00

The "S" line holds its own performance-wise against any new jap rig around. One reason is that the "S" line is not synthesized and is therefore not plagued with the annoying phase noise maladies so prevalent in jap radios. As you suspected, however, the other main attraction is quality. Japanese hams also recognize the "S" line as one of the paramount examples of classic American engineering and manufacturing expertise, and are certainly willing to pay for the privilege of owning one. Also, "S" line radios are a bit more interactive - i.e. you peak the grid, dip the plate, adjust the loading, etc., which is also an attraction.

However, you can get probably 90% of the quality and 99% of the performance of an "S" line with something like a Hallicrafters SR-150, National NCX-5, or even a SOB-102 (except for the quality part on this one!) for about 1/4 the price of an "S" line. You'll have all of the fun of an "S" line on the cheap, then if you want to step up with the anal retentive Collins "collectors", you can go search out an "S" line.

> 51S, as they are basically the same design.

The 51S-1 and 75S series are absolutely not the same design and are in no way similar save for appearance, and the fact that they both have PTOs and mechanical filters. I don't know what the reviewer was whiffing when he said that the 51S1 had superior performance to the RF-590 (the *best* solid state receiver ever made, IMHO). However, the RF-590 wasn't really designed to cover medium wave, and its front end really wants to see a 50 ohm impedance (almost impossible to acheive at medium wave, without tuners and/or attenuators).

I've used both of these in a professional capacity and I can say that the front end of the 51S1 is sadly lacking in IMD performance. It is essentially unusable on 6-10 MHz in Europe because of this. The RF-590's front end is the most crunch-proof I've ever seen ('cept for an R-390). The 75S series front-end performance, with its tunable preselector, runs rings around the 51S-1

Can't vouch for the NRD as I've never used one.

This does seem to be a major problem with modern radios (phase noise.)
It is such a shame that digital techniques have taken over. I have come
up against this same problem with modern widescreen TVs because of
picture problems but that is another story. It is often said that one
should not dwell in the past but if the technology was "better" perhaps
manufacturers should take more notice.

Try to get the Sams Photofacts for this rig and follow the allignment
procedures. This will help you better than anyone can explain.
Try the Local Library for the Photofacts and if they have them, get
them copied. Your library should have a copy machine.

If they dont have it for the Adams, Try the Madison. They use the same
main board and allignment procedures are all the same.

72. Watch out for an enigma machine!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-02 00:00:00 UTC
From: Richard Hankins <richard.hankins@nt.com>
Message-ID: <38E7C67F.AD5B68BE@nt.com>
Source record: 68732

Folks,

the TV news here in the UK today mentioned that an Enigma machine (used by the Germans in WWII for ciphering/deciphering messages) was stolen recently from Bletchley Park - the famous wartime spy centre just north of London, which monitored and deciphered much of the German radio traffic, and now a museum.

There is a picture of an enigma machine here:
http://www.cranfield.ac.uk/ccc/bpark/morebpark.htm

Aparently there are only 3 enigma machines left in the world (don't know how true that is - but the BBC made the statement) - so if one turns up where you are, I suggest asking some very searching questions about its origins!

Seems like a never ending quest.

I'm looking for the following Drake C-line gear, must be good to
excellent condition, fully operational (if otherwise, please state
what's up).

MS-4 Speaker
T4X-C Transmitter
500 and 250 Hz 2nd IF filters for R4C

I would also be interested in an R4C, as long as it has 5 filter
positions (not 4).

Please call toll free at (800) 962-2949, or email to
NeilR@innermedia.com

Thanks, and best 73's.

Now THIS is the sort of "FOR SALE" posting that even *I* am against!
What does this modern genny have to do with antique radios
or ham boatanchors? Not a blasted thing.
At least when I post a FA/FS here,
it has something to do with antique radios or boatanchors.

Dave S.

78. For trade Windows NT4.0

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-02 00:00:00 UTC

Swap Windows NT 4.0 with SP 4 includes 3 floppies and 2 CD's with manual and certificate all new shrink-wrapped. Swap for short-wave stuff, older is OK and maybe even non working. Accessories too.
What you got?

Thanks
Butch

I am looking for a valiant. Would prefer one that has also had the audio mods but an original would be OK too. I have an extra HRO-50T that is available as partial payment for the Valiant but willing to go straight cash. Call me at 909-789-4110 or E Mail.

Thanks for reading

I have an HRO-50T with just the D coil that I bought that is excess to my needs and current projects list. I re-capped it with orange drops and found that after doing that it don't work! I probably made a mistake on one of the caps because it was OK before the re-cap. Cosmetically a 7, missing the bottom cover, which seems to be a common occurence. $250. Call me at 909-789-4110

Bob

I have suggested to the person in charge at the host of the "rec.radio" hierarchy (University of Hawaii) that any message starting with "FA:", "FS:", or "WTB:" not posted on "rec.radio.swap" have its distribution rewritten to appear on the swap NG and not on the others. However, the problem is that as soon as spammers notice this, they'll continue and simply avoid the catch phrases that cause the rewrite. There's no easy solution other than to MODERATE EVERY POST, and that step hasn't become necessary yet.

[Similar result if they notice that their posts are being filtered out.]

Source record: 68645

Kenwood TS-830S gold in 9+ condition. This is an extremely nice rig -- full output, super receiver. Covers 160 -- 10, including WARC bands. Has dual SSB and CW filters for Variable Bandwidth Tuning in both SSB and CW. True RF speech processor. Passband Tuning. RF notch filter. Unbelievable receive audio. Whether contesting or just rag chewing -- this is one super rig. Have both operating and service manuals. Why am I selling? Just don't do HF anymore -- don't even have an antenna.

$425.00 plus UPS from 83861

For sale:

Collins Plate Transformer, Type 672-258C-00 Primary taps 105, 110,
115, 120, 125V
1100V CT at 212 mA, very under-rated. 2500V test. 50-60 Hz
Will sell for $90.00

Plate Transformer, 120/240V AC primary, with secondary of
4160 V at 120 mA (500 Watts) Will sell for $85.00

Plate Transformer, Primary 120V or 240V,
Secondaries: 1475 V CT at 505 mA, plus 6.4V at 14 Amps,
5.1V at 5 Amps, about 4" X 5" X 6" tall, new $65.00

Plate Transformer, Raytheon with 115V primary. Secondary is
1100 V CT at 166 mA. Will sell for $50.00

Plate Transformer, AVCO, 120V primary, with secondaries of
1050 V CT at 75 mA, and 5 V at 20 Amps,
New. Will sell for $32.00

Plate Transformer, General Electric, with primary of 110, 115, 125V,
and secondaries of 1342 V at 100 mA (no CT),
380V CT at 100 mA, and 5V at 3.5 Amps. $38.00

Plate Transformer, Berkshire Transformer Co. Type BTC-1180.
1080 V CT at 142 mA, plus 6.3V at 1 Amp, 5V at 3 Amps.
Will sell for 36.00

Plate Transformer, Raytheon 1100 V CT at 166 mA
Will sell for $40.00

Plate Transformer, Triad, with 115V primary, and secondaries:
1000V CT at 300 mA (taps at 800V CT 300 mA) plus 6.3V at 6 Amps,
another 6.3V at 6 Amps, and 5V at 6 Amps. Will sell for $64.00

Plate Transformer, Bendix with 115V Primary, and secondaries:
860V CT at 250 mA, 6.3V at 3 Amps and 5V at 2 Amps. New $35.00

Filament transformer: 7.5V CT at 8 Amps Thordarson 21F16 upright
mounting
will sell for $25.00

120V primary
35V at 2A transformer mounted on a neat little chassis:
10" X 5" X 3" with only a few small holes. No other parts mounted.
Would make a great project chassis.

Will sell for $12.00

110/220V Primaries - 1225V CT at 215 mA and extra taps for
1185V CT at 200mA sec $44.00

115V Primary - 1000V CT at 300 mA $45.00

115V primary - 920V CT at 300 mA (will supply up to 500 mA DC) $48.00

920V at 700 mA upright mounting $59.00

390V at 1.5 Amps by RCA, with tap for 355V $59.00

370V at 200mA, will sell for $29.00

280V CT at 500 mA, by Chicago Transformer Co. $42.00

200V at 2.5 Amps... $55.00

STANCOR plate transformer
120V AC primary
(1060 V secondary)
580-0-580 V AC at estimated 325 mA
5V at est. 4 Amps
2.5 V CT at est. 8 Amps
5" X 5" X 5"
Will sell for $32.00

I have located an Icom R-70 but the since the owner is not interested in a trade I now must sell the MacKay 3010-B vice trade. Here is the poop:

ITT/MacKay 3010-B rcvr. Serial number M0055. Rack mount version/no cabinet. Covers 700khz to 30 mhz continious. No optional filters, just the 6kc filter. Naturally this rcvr sounds great, both am and ssb. If it did not have this bizzare measuring tape tuning thing I would probably keep it because the audio is outstanding. I am running the speaker output of the rcvr into a small mono audio amp into a large communications speaker. The audio out of the rcvr is 1watt which maybe good enough for some of you but my hearing stinks.

Operationally it is very good but the switches are scratchy (not all). The tape/tuning drive is a bit loose and if you turn the VFO too fast it slips off of the spools like the old reel-to-reel decks of yesteryear. I hear that it is the springs. If they are replaced then reportedly the tuning tape will stay put. Apparently this is common with these rcvrs.

No extra holes anywhere. Front panel is decent, around a 7 out of 10. With TLC will clean up nicely. Chassis has the typical 30 year layer of gunk. No major corrosion. The unit does not have am, cw, or ssb modes, just bfo on or off but it sounds outstanding in all modes. It works like a champ BUT since I really want an R-70 this is now for sale to pay for that. No pictures, sorry.

$375 shipped lower 48. Payment by money order only.

I still have the large Aiyden Industries plate xmfr. This is the big commercial unit that has primary for 208/220/240 and a secondary of 3300 or 4400 center tapped (or 1/2 of 3300/4400 each side of CT) at 1.75 amps CCS. This is a brute and is 150 pounds so pick up only please in San Diego. Measures about 17" tall by 11" by 11". Price is $175 pick up only. Payment by money order.

Lane
Ku7i
San Diego

I spent too many hours looking for a supplier of NOS 455kHz IF cans. I
am looking for a large quantity-- about 250 of them.

Anyone know a supplier that would carry this quantity? The modern
ones from Toko, et al. don't look right.

Thanks,

Steve.

Subject: ** FLEA at MIT ** Sunday April 16th Cambridge MA
Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

Spring Has Sprung and the seasons first MIT Flea is only 2 weeks away...

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday April 16th 2000
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23-W1BOS/R and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

I have two Collins mech filters P/N 526 9427 000 .

This is the sideband filter from the KWM-2A. It is meant to be used with
456.35 and 453.65 carrier osc xtals to produce USB and LSB from
balanced carrier.

The filters I have are the later, rectangular, plug in style.

#1 is unused

#2 is attached to the KWM-2A bracket and includes
several assoiated parts

also have two USED xtals (with short leads)

make offer.

Jim, Call Kinko's or whoever does that kind of copying in your town,
and find out the cost of a copy. Let him know the cost, you can add
a few bucks for your time to run it down to the copy shop, and then,
when you get the check, send him the copy and keep the original at home.

I have to know someone pretty well to lend a manual.
It's not that most people are crooks- it's just that they
procrastinate, or family things get in the way,
or it turns up lost, etc. etc.
It's far better to ask the person to pay for a copy.
If he doesn't want to do that, what does that tell you
about how much he wants it?

From: ac6v <ac6v@ix.netcom.com>
Message-ID: <38E8D1F3.A60B4338@ix.netcom.com>
Source record: 68661

Does the SB220 cover the WARC bands i.e., can it be horsed over to these frequencies. If so what about the VSWR back to the exciter. If not -- are there mods available to get it on the 30M, 17M and 12M bands??

Thanks (I'll be selling it for a friend).

Anyone ever see an NC400 posted anywhere?

There was a new one at our local radio store,
years ago, and it was an incredible contraption.

I suspect that they didn't make many of them,
but the new price was very high, as I recall.

116. ART-13 Modulator Tip

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-03 00:00:00 UTC
From: dan harlan <dharlan@ameritech.net>
Message-ID: <38E93F0E.E3A09849@ameritech.net>
Source record: 68675

Fellow Anchorites,

Just spent last week, last weekend and this
evening getting my A*s kicked by an ART-13 with nasty
asymmetrical modulation. It would not quite hit 100%
positive and only about 75% negative. In other words
it would only modulate about 70% total.

After more trouble shooting (read: dickin'
around) than I care to get into it turned out to be
R123, a 12.6 ohm 25 watt wire wound that went to almost
15 ohms causing the bias and filament voltage to shift
on the 811's which are in series. The two 811 filaments
in series are in parallel with this 12.6 ohm R and then
that combination is in series with the 813.

I saw this symptom once before in an ART-13
but it was simply a bad 813.

Hope this helps someone

Dan N8ETQ Cleveland, Oh.

BTW: Does anyone know of any other rig that uses
triode filaments connected in series like
the ART-13?

>mechanical filters.

My apologies for that - it was my comment not the reviewers, and the result
of failing memory and not having seen a 75S for some years, they're not very
common over here in the UK ;-)

I don't know what the reviewer was whiffing when he
>said that the 51S1 had superior performance to the RF-590 (the *best* solid
>state receiver ever made, IMHO). However, the RF-590 wasn't really designed
>to cover medium wave, and its front end really wants to see a 50 ohm
>impedance (almost impossible to acheive at medium wave, without tuners
>and/or attenuators).
>

He didn't say the 51S was *superior* to the RF-590, but implied that is was
as good, on MW at least. To quote: " ...I already have the same performance
(and I checked them side by side) in the 51S-1." The RF-590A first oscillator
close in phase noise came in for a little criticism, and the supplied graph
did support that, but that was the only real criticism of a fine receiver.
He liked the RF-590 very much, and wished he could afford one - they fetch
about 2250 pounds here, say $3600, if you can find one!

>
>Can't vouch for the NRD as I've never used one.
>
Neither have I, but it's DSP has come in for a lot of critisism.
I'll stick with my Racal....

124. original boatanchor creation message

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-04 00:00:00 UTC
From: blackm00@cam.org
Message-ID: <blackm00-0404000105160001@dialup-358.hip.cam.org>
Source record: 68594

I don't know how complete it is, and it only goes back some years, but
there is an archive of newsgroup creation messages at uunet (another
site archives them too, but I don't have that URL handy).

Considering the state of this newsgroup, I thought it would make
sense to post the original newsgroup creation message for
rec.radio.amateur.boatanchors as found at
ftp://ftp.uu.net/archive/usenet/control/rec/rec.radio.amateur.boatanchors.Z

We are actually lucky, because unlike some cases where the control message
only gives a vague description, this one includes the charter as originally
written. Yes it does mention ads, but I suggest everyone
take a careful look at the original charter, because most of it is about
the use of this newsgroup for discussion, not advertisiting.

I remmber when this newsgroup was created. I never saved any of the debate,
but there was plenty of discussion about whether ads would or would not
be allowed. The boys were used to ads on the boatanchor list, so
that's what happened.

But face it. While this newsgroup was set up primarily for discussion,
it's turned into a buy and sell newsgroup. rec.radio.amateur.equipment
was set up for the discussion of commercial equipment, but it too has
turned into a mainly buy and sell newsgroup. That's what happens when
some ads are allowed in.

Once it was okay to post a few ads, then the deluge came. That's why
we see not only boatanchors for sale, but ham rigs that would not
fit the description. And then there are the ads for audio equipment.
Followed by ads for computers, and guns. And of course, from there
it's all too easy to throw in posts about Charlton Heston and the
NRA.

Or take a look at rec.antiques.radio+phono which I've been looking at
for the past week to see the state of advertising in that newsgroup.
I've seen comments about too many ads, but I was shocked to find that
they actually have discussions of the equipment and talk about techniques
over there, and there are virtually no ads.

The whole idea of allowing ads here in the first place was that it
was seen as a logical extension of the rest of the hobby, namely the
history behind the equipment and the restoration of that equipment. But
if people's preoccupation is with selling stuff, we seem to get more
posts here from people wanting to know a suitable price of an item they
want to sell than to know the history of that item for sale, then it sure
doesn't seem like the hobby is old radios, but the selling of those

old radios.

Then Ebay came along, and people use the excuse that forsale ads are here, so Ebay is okay. But that just moved the problem forward, because it didn't deal with the sad state of the newsgroup to start with. And the fuss over proper subject headers again covers up the issue, because the people pushing that idea are the ones who want to advertise here, and by pushing the header idea, they feel they can make the ads less obnoxious.

rec.radio.amateur.boatanchors is an unmoderated newsgroup which passed its vote for creation by 277:31 as reported in news.announce.newgroups on 8 Oct 1996.

For your newsgroups file:
rec.radio.amateur.boatanchors Vacuum tube-based amateur radio equipment.

The charter, culled from the vote result announcement:

The newsgroup, rec.radio.amateur.boatanchors, is primarily for discussions of topics related to classic amateur radio gear. Participation by others who are not licensed radio amateurs are also welcome.

EQUIPMENT.
Appropriate equipment of the boatanchor category includes:
- equipment constructed primarily with vacuum tubes, not solid state devices, and manufactured generally in the post WW II-to-1970 timeframe.
- transmitters (amateur, military, home made)

- receivers (amateur, SWL, military, home made)
- station accessories (keys, bugs, microphones)
- test equipment from the boatanchor era used in the repair and restoration of boatanchors, such as scopes, af and rf generators, meters of all kinds, etc.)
- parts and techniques used in construction of boatanchors (vacuum tubes, condensers, etc.)

TOPICS.
Topics regarding the above equipment built entirely or primarily with vacuum tubes (as opposed to solid state devices) are welcomed in this newsgroup. Suitable boatanchor topics may include:
- collecting
- modifying
- tuning
- obtaining parts (specific requests for parts/equipment are permitted)
- manuals and TM (tech manuals) copies exchange
- restoration and refinishing
- values of boatanchor gear
- sources for parts
- questions and advice for others
- Morse Code operation - advice, legends and lore
- Modes of operation: CW, AM, early SSB
- manufacturing during the boatanchor era, including companies, personalities, and manufacturing techniques
- design and engineering history of equipment of the boatanchor era and comparisons to prior technology (arc- and spark-gap transmitters, Alexanderson alternators, galena detectors, magnetrons, Nixies, quartz crystals).
- other subjects of a historical nature
- commercial postings, if SPECIFICALLY offering products and services DIRECTLY relating to boatanchor collecting.

OFF CHARTER TOPICS.
The following subjects are off topic in this newsgroup:
- discussions of hi-fi, stereo, and/or broadcast receivers. (use rec.antiques.radio+phono and rec.audio.tubes newsgroups)
- antique equipment (use rec.antiques.radio+phono)
- entertainment television receivers
- cross postings from rec.radio.swap
- discussions that are more appropriately held in other rec.radio.amateur newsgroups, such as code vs no-code
- off-topic commercial postings are specifically prohibited from the newsgroup

FAQ.
- A list of Frequently Asked Questions will be developed by volunteers in the newsgroup and will be posted monthly. This FAQ will be helpful to beginers as well as first time visitors to the newsgroup. The FAQ will contain a list of commercial vendors who specialize in products and services of value to boatanchor collectors.

Are you sure it's "KV"? There was (I don't know if it still exists)
a company in the UK entitled KW Electronics. They made ham equipment, maybe
other things for all I know, and Viceroy was the sort of name they'd put
on their ham equipment.

I just did a brief websearch, and there was a KW Viceroy though that's
as far as I looked.

For Sale: Tube Data on CD for Windows 95/98. This is a CD that contains tube
data in files in Adobe .pdf format. An installable copy of the Adobe Acrobat
Reader 4.05 is included for those who do not yet have it. The files are:

Eimac 1948 catalog -- 145 pages of tube curves and specs covering triodes from the 25T through
the 2000T and tetrodes from the 4-65 through 4-1000.

Eimac 1975 catalog -- 112 pages of tube specs covering the tetrodes in the catalog above as well
as the modern glass/ceramic triodes and tetrodes ranging from the 4X150 up to multi-kilowatt
water and vapor cooled tubes.

Eimac Application Note # 8 - The Care and Feeding of Power Tetrodes, 27 pages.

Eimac Application Note #9 - Single Sideband, 21 pages.

RCA TT-3 Air Cooled Transmitting Tubes, 1938, 192 pages.

RCA TT-5 Air Cooled Transmitting Tubes, 1962, 322 pages.

RCA RC-22 Receiving tube manual.

GE Essential Characteristics, receiving tube manual.

Price for this CD is $10, which includes first class postage in the US. If you would like
one, please send a copy of this post with $10 to me at:

Philip Mills
P.O. Box 1307
Friendswood, TX 77549-1307

Jon

Heres a cheap way to get a handle on this. Pick up a Drake R4A, B, or C at a hamfest or in the classifieds, and see how you like it. I believe you should be able to get an A or B for $125 to $250. The A&B have the selectivity filters built in, and they all include passband tuning and a notch filter.
If you like the way the receiver performs, look for either the T4X, XB, orXC xmtr (say $100-200) if you want to be able to cover the WARC bands, ----OR, pick up a TR4 (say $200-$300)to produce 300w pep out (without the warc capability), and maybe keep the receiver to allow you to operate split when needed. (the tr4 can't "transceive" with any of the receivers, but it can mute and antenna switch) ----If you don't like the receiver, you can probably recover about what you paid, and move on.

One caution---be prepared to do some work on these babies, and try to get some assurances that the unit works FB when you get it. I've had a ball with an r4b and t4x, and also a tr4, all of which needed some work. But they've been able to work nearly 190 countries in the past year using only wire antennas, and I actually use them more than my Collins KWM2a.

I'm not interested in a debate between collins and drake, but this is the cheapest high quality way to boatanchor. I think part of the attraction is that for hams who got their tickets when these were the only game in town, there is a basic satifaction at finally owning one of these fine rigs, even 30 years later. I don't know if this will persist for hams who were originally ticketed in the later 70s and 80s

Good luck
Randy k8bux

Joe, Try GM7191 available at most auto parts stores. It's a GM paint color code, that is available in a spray can. It's a near perfect match. I use the "Plastic Coat" brand. Don't know about the Heath green but I bet a dollar to a donut that there is a auto color that matches. 73, John

Glenn,

KW Works (the equipment was called Viceroy at one point) was run by Rollie G8KW who is retired and the company is probably gone
or sold. The flagship transceiver was the KW2000 series (I have a KW2000E) made from the early 60's to 1974 or 5. There was also an amp, a wattmeter that shows up as "like Collins colors", and several separates RX/TX. The KW2000 was popular around the world especially at RAF/RCAF club stations. The gear was sold in the USA for a short time. There is a recent article in RAD-COm
from RSGB (May 1999). Manual copies are available from Mauritron (they have a web page) who also have manuals for Racal, Eddystone and other gear.

The KW2000 is all tubes with a pair of 6146 or 6146W's in the final. Mine puts out 80 watts on SSB and 100W on CW. I made over 300Q's on 10 and 15 SSB in the ARRL Field day in a short effort. The rap is the dial is quite stiff and only 5 khz not 1 khz like Drake or Heath SB series. It does cover 160 which was missing in Heath and some Drake gear.

Try a piece of wedge-shaped wood between the frame and last lamination
and make sure the assembly screws are tight. You might also try
the same solution between the frame and bobbin if it still buzzes.

Joe,

Assuming there is no circuit malfunction (like a leaky filter) that would cause the transformer to be abnormally loaded, the problem is probably just loose laminations. If the laminations are bolted, try tightening them. Sometimes, and I realize this doesn't sound very sophisticated, a quick sharp blow with a small hammer on the corner of the transformer will "reseat" a loose lamination. Try a tap on each of the corners and see if there's any difference. Continue on the corner that gives you the best results. Try the tightening first.

You wouldn't believe how many I've fixed with the old hammer trick. When I was doing Hi Fi repair for a living though, I was careful not to let the customer see this particular fix. It looks crude, but it works.

Agree - I forgot about the Drake "4" line. One problem I've seen with both the ones that have passed thru my hands is intermittent grounds. Both were bought for a song from guys who couldn't ever figure out what was wrong with them. Low output, AM not working, no bias adjust, etc., turned out to be high impedance connections between ground lugs and the chassis. Tightening up all the ground lug screws in the radios did the trick.

>
> I'm not interested in a debate between collins and drake, but this is the
> cheapest high quality way to boatanchor.

As I said, these radios are 90% of the quality of a Collins, 100% of the fun, and about 1/3 the price. A deal by any stretch of the imagination. The *only* downside of Drakes, Nationals, and Hallicrafters of the 60s and 70s is their propensity to use sweep tube outputs vice good ol' 6146s.

Source record: 68622

Entire station For Trade: (Sorry, will not split-up).

Kenwood TS-180S w/DFC solid-state digital HF transceiver. Covers 160-10 Meters (no WARC). Radio has 4 tunable memories. Has 2nd SSB filter installed for really good selectitivity. 100 watts out SBB+CW. Includes photocopy manual, Kenwood hand mike and DC power cable. Works great. It is older Kenwood gear and has original paint with some scratches, but lettering on front panel is perfect.

Kenwood VFO-180 external VFO. Matches above radio. Includes connecting cable. Works great. In same cosmetic condition as the radio.

Kenwood SP-180 external speaker. Also matches the radio. Includes 3 passive audio filters.
Works great, in same condition as the other 2 pieces. Has built-in homebrew HamComm RTTY interface with cable and 9-pin RS-232 (com port) connector. Works very well.

Samlex SEC-1223 power supply. Small lightweight 23 ampere switching power supply to power the Kenwood gear. Works great. Includes manual and box. Excellent condition.

Trade for Drake B-line (R-4b, T-4XB, MS-4, AC-4) in perfect working order. Prefer to
have crystals for 160, WARC, and all of 10 Meters.
Must have perfect front panels (lettering included) and knobs and no cabinet dents.
Scratched cabinets and chassis spotting OK.

Thanks..... Mark W4UDX

Hi Gang,
I have for sale several sections of Andrew hardline coax. All used sections were installed and removed by a professional tower crew. All ends have been sealed. Several of the sections have connectors installed. All are in good shape. Prices are per linear foot. Here is a list:
60' 1 5/8" $2.00
125' 1 5/8" $3.00
150' 1 5/8" $3.00
215' 1 5/8" $3.00
100' 1 5/8" $2.00
100' 1 5/8" $2.00
100' 1 5/8" $2.00
125' 1 5/8" $2.00
125' 1 5/8" NEW!! $5.00
140' 1 5/8" $2.00
215' 1 5/8" $3.00
45' 7/8" $2.00
75' 7/8" $2.00
75' 7/8" $2.00
75' 7/8" $2.00
35' 1/2" $1.00
40' 1/2" $1.00
All items are pick up in central Iowa. Shipping can be arranged at the buyer's expense. Yellow Freight will ship to almost anywhere. You can reach me at 515-243-5293 or of course email is OK. Thanks and 73,
Alan

One thing you might consider doing with your collections of non-replacable manuals, is what I am doing with mine......I am slowly getting set up to put everything on CD's. That way I can group them as needed and can pick and choose different approachs and group them as reference items. I have so many hard to find books and manuals in my collection that it is the only way for me to make sure that they survive. Besides, when they are all on a disk, I can either email the files or they can toss me a couple of bucks for a disk copy...

With the cost of a CD blower so cheap nowdays, it is probably the best way to make the material usefull to more than one person, IF one is so inclined. When I've had people copy things for me, I just ask what the going rate for copies are where they live and the number of pages and just send them a check to cover to copying costs, mailing and gas and time...

Over the years I've learned the hard way about freely lending things...so nowdays I don't get asked since I demand an equivalent value item as a hostage for safe return.....

There are lots more than three Enigmas left.

BBC also stated that the machine was worth $100,000 (or maybe they
said 100,000 Pounds Sterling - I forget...).

Either way, the 100K figure is way high unless there was something
REAL special about this particular Enigma. (The picture on the BBC
website showed a garden variety three-rotor version.)

The BBC website also called Alan Turing a "genuis"...

But this is actually funny, because the Enigma machine was stolen from
the Germans in the first place.

I forget the exact story, but members of the Polish underground was able
to steal an Enigma machine, or perhaps they stole the parts and assembled
it in hiding.

So the Allies had the machine reasonably early in the war.

I keep reading books about intelligence gathering during WWII, and I
keep seeing comments about how the ability to decode the Enigma messages
was a major source of information. I was reading a book about WIld Bill
Donavan about a month ago, and the tone of it seemed to say that
virtually none of the other sources of information were important.

It's kind of a hazy subject, since they didn't want the enemy to know
that they could decode the messages, so there was a lot of subterfuge,
and reading the books, it can be hard to judge where Enigma fit into
everything.

One book I did read was The Secret War by R.V. Jones (I may have the title
and/or author a bit wrong) which was about what went on at Bletchley Park.
It was more about the techniques of intelligence gathering (as opposed
many books about the subject that mix in the sabotage work) and the

author mentions towards the end the usefulness of hams at the place.

While not about Enigma, another book I've read recently was "Invention That Changed the World:How a Small Group of Radar Pioneers Won the Second World War" by Robert Buderi. It covers the develpment of Radar shortly before, and during, WWII, and then goes on to show the impact of that work on the world in general after the way.

One interesting thing was that they bascially used catswhisker detectors, packaged in a more useable form, for the detector diodes in the radar sets, after the Americans were unable to get good results with tubes. And that work lead to the development of the transistor after the war.

Not only is it safe to say that, that is the PURPOSE of "rec.radio.swap".

However, note that this thread was originally cross-posted to 5 newsgroups, each with a separate charter (if any) and separate topics. There is no "the charter" that covers all 5 groups (or even the 4 that this response is going to).

Hmm, I wonder, how tough is the Enigma algorithm by todays
standards? I know, not secure, but just for S&G I wonder if
anyone has implemented it in software, and if some of the
intercepted comuniques are availible in unencrypted form.

If memory serves, wasn't it basically just a substitution algorithm? It was complicated by first 4 then later 5 decades of offset, which, given the computing power of the time (all human), rendered it relatively indecipherable, but if you put a Pentium on it today, it ought to be duck soup to work out all the possibilities.

Here are two Java-based Enigma simulators, with class libraries if you
want to build your own. There is also a pointed to original German
Enigma messages.

Yes, there are some simulations of various enigma types (railway, army
etc) available from the net. I forget the URLs but try a search. With
these you can set the wheel settings and start point and view the
plain text, encrypted text as well as the rotor connections moving.

Greg,

Most likely you are going to have to replace it with four separate caps. As you may already know the ground lead is the common negative of the four. Many people will "gut" the old bad cap and stuff the new ones inside the old can so the looks of the radio is not altered. For wax filled caps this is done by heating up the old cap and melting out the wax. The metal ones usually are eviscerated by attacking it with a dremel tool.

Hope this helps,

Sal D'Ambra

And a good thing it was, too!
>
>I forget the exact story, but members of the Polish underground was able
>to steal an Enigma machine, or perhaps they stole the parts and assembled
>it in hiding.

There were actually several versions of the ENIGMA machine. They were extremely advanced for their time, and very ingenious. Besides using an advanced substitution algorithm, they required that the user know the initial rotor and jumper settings in advance - and the settings were changed every 24 hours. I don't think the Poles or the Brits had an actual machine - just the thory of how the coding method worked.

By the techniques known at the time, the ENIGMA code was not unbreakable. But it took so long to break by conventional methods that it was considered "virtually unbreakable". What the Germans did not consider was that the Brits would develop new codebreaking methods and machines that would advance the art

by leaps and bounds, and would be "reading their mail" almost perfectly. There were even cases where the Bletchley Park folks decoded ENIGMA messages - WITHOUT advance knowledge of the rotor and jumper settings - BEFORE the intended recipient could!
>
>So the Allies had the machine reasonably early in the war.

They had machines which could break and decode several German and Japanese codes. Just having a machine is not much - without the rotor/jumper settings, you cannot do much.
>
>I keep reading books about intelligence gathering during WWII, and I
>keep seeing comments about how the ability to decode the Enigma messages
>was a major source of information. I was reading a book about WIld Bill
>Donavan about a month ago, and the tone of it seemed to say that
>virtually none of the other sources of information were important.

They were all important. But ENIGMA was a major piece of the puzzle, because the Axis powers were so paranoid, and such control-freaks, that they required frequent, highly detailed reports be sent to HQ. And they issued frequent, detailed orders the same way, all based on the idea that their communications were totally secure.
>
>It's kind of a hazy subject, since they didn't want the enemy to know
>that they could decode the messages, so there was a lot of subterfuge,
>and reading the books, it can be hard to judge where Enigma fit into
>everything.

The Germans tended to blab everything on the radio. U-boats sent all kinds of reports to Berlin. Rommel had no cable communications to Hitler - it all went by radio. Rommel was always short of supplies because the Allies knew the location of every supply convoy that tried to cross the Mediterranean.

>One book I did read was The Secret War by R.V. Jones (I may have the title
>and/or author a bit wrong) which was about what went on at Bletchley Park.
>It was more about the techniques of intelligence gathering (as opposed
>many books about the subject that mix in the sabotage work) and the
>author mentions towards the end the usefulness of hams at the place.

There's one I gotta read!
>
>While not about Enigma, another book I've read recently was "Invention
>That Changed the World:How a Small Group of Radar Pioneers Won the
>Second World War" by Robert Buderi. It covers the develpment of
>Radar shortly before, and during, WWII, and then goes on to show
>the impact of that work on the world in general after the way.

The advancement in radar from 1939 to 1945 was simply amazing. From low VHF units weighing tons to airborne microwaves in <5 years. Not only was radar developed, but also radar countermeasures like "window" and radar detectors.

It was full scale electronic warfare. One side would develop a radar, and the other would develop a radar detector and countermeasures. Sometimes the results were quite odd:

- The Germans developed a radar detector for their subs that used a superregenerative detector - which radiated a signal. Allied radar operators in antisub aircraft learned that they could detect the German radar detectors, so they would fly patrols with their radar transmitters turned OFF, listening for the German radar detectors. Several Germans were sunk by this method.

- A prototype of an airborne radar unit fell into German hands when a plane carrying it crashed in France. The Germans quickly developed a radar detector for it - but development of the system they captured was abandoned shortly after the plane, crashed because it simply didn't work very well. So they spent a heck of a lot of effort listening for something that didn't exist.

- Before the Battle of Midway, US Navy intelligence knew that the Japanese were planning a massive strike. Some thought the target was the Aleutians, some thought Australia, some Midway, some even thought Hawaii. Even though the Japanese code was broken, they could not determine the objective because it was always referred to by a code word - "Butterfly", as I recall. Nad there were simply not enough forces available in the spring of 1942 to defend all of the possible objectives. So a phony message, uncoded, was sent from US forces on Midway to Pearl Harbor, reporting a water shortage due to failure of the fresh-water distillers on Midway. Sure enough, after a short time the codebreakers intercepted a Japanese message reporting a fresh water shortage - on "Butterfly".

>
>One interesting thing was that they bascially used catswhisker detectors,
>packaged in a more useable form, for the detector diodes in the radar
>sets, after the Americans were unable to get good results with tubes.

Not exactly. They used silicon diodes as mixers, followed by tube IF amplifiers. The 1N21 was typical.

But most important was the British-developed, Rad-Lab perfected reentrant cavity magnetron, which gave a high efficiency source of highpower microwaves.

>And that work lead to the development of the transistor after the war.

Hmmm - that's kind of a stretch. The transistor was developed at Bell Labs by three physicists who were actually looking to develop a solid state switch, to eliminate the need for electromechanical relays. Once they understood that their "crystal triode" was actually an amplifier....Nobel Prize time.

Looking for a front panel for a HQ-170A that was damaged beyond repair during shipment.

Also the 24 hour clock was damaged.

I think the front panel between a HQ-170 and a Hq-170A is different in the mode switch area.

Thanks for your time, de John Nï¿½ZEU

Pardon my ignorance, but what exactly does "No Reserve" mean? (I notice there's a $100 minimum...I thought "no reserve" meant no min, but obviously that's wrong.)

Cheers,
Tom

I don't see anything wrong with his post. As a matter of fact, it got me to thinking. Hams don't get any exercise in the shack and that can be a big health problem to us old folks.
Why not buy one of these and mount it onto your wife's stationary bicycle and you could generate your own power while you chewed the rag? I would be a good incentive to keep pedalling for a long time too. I kinda like the idea. 73 Guy

A reserve is the price, chosen by the seller, below which either the seller or the buyer can opt out of the transaction. It's generally not disclosed -- when you bid on a reserve auction, you don't know if a bid of a given amount will meet the reserve until you actually bid.

Personally, I don't like reserves and don't see the point in using them. I always set a reasonable minimum bid and let the market do what it wants.

Joe: does this really need fixing? All 60 Hz AC transformers hum some! It's ok also if they heat a little also. If they get too hot to touch there's a problem, Does the hum keep you from hearing other things? If not forget it. You could put it in a box to keep the hum down but then it would heat some and that's another question. i hope this helps DfR

Well I don't have one, but ithink know where to get a disk. Harry Poster has or had a disk about10" in diameter. It is probably still in his garage near Patterson NJ. Harry is a Dealer in antique and exotic boatanchors It is interesting to me to find someone interested in mechanical TV. I have a lot of literature on the subject back to WRNY but I have never seen a disk receiver.. Of course they used a very narrow bandwidthand would not be compatible with NTSC, NO WAY
. Bandwidth was about 15KHz. There was also A Columbia Broadcasting Colour TV broadcast system that used a disk, but that's a different matter. If wanted such a tube I would look in catalogs of technical lighting products.There were what was called "Crater Tubes"on the market about 20 years ago that acted like Neon tubes but put out much more light.
Finally, if all else fails, the old guys used small Arc lamps as illminatiors in mechanical TVA. A small arclamp with pencil size electrodes and the right optics can be used to "speak over a light wave" It was a setup we tried when i was in College, except we used electrtoluminescent panels instead of neon or arcs., it worked.
ok across the length of the physics lab with a photomultiplier tube as a pickup Please let me know what you want to do with it. and I'll be happy to advise. If you want to sell one on Ebay I'm not your man! DfR

I conducted a straw-poll vote more than a year ago regarding FA posts;
of those who responded, the votes were about equally split for/against.
So I added a note to the rec.radio.swap FAQ reminding readers, that
because FA posts are a sensitive topic, to please append "FA" in the
subject line so as to avoid flame wars.

For Sale:

National HRO-60T with matching speaker and complete basic coil set A,B,C,D + the F coil for broadcast band, coil box and manual. Located in the San Francisco Bay Area and prefer a pickup of this radio. Shipping will be expensive. The radio is in very good condition both cosmetically (light scuffs at the edges/front panel is perfect) and electrically and includes the internal crystal calibrator. This is one you can use right out of the box. Good HRO's are getting harder to find and this one is nice.
Pictures at: http://home.pacbell.net/friday2k/hro60.htm
Price is at $850 firm.
73,
Jack

250. SALE, AUCTION and TRADE-The Charter CAN Be Changed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-06 00:00:00 UTC
From: Bruce McFarland <mbmcf@erols.com>
Message-ID: <vgaqesopnbd238gtctib2j5v676gusm7bj@4ax.com>
Source record: 68449

Hi Folks,

Having lived through the rec.photo spammer wars a year or so ago, I
would like to impart the following:

1) There are alot of people like MIT out in cyber land, and the
only authority that they respect is the dollar.

2) rec.photo changed their charters so that the spammers had
their own place to offer their wares. Each group developed a for sale
alternate, as below
rec.photo.equipment.large-format -->>
rec.photo.marketplace.large-format
rec.photo.equipment.medium-format -->>
rec.photo.merketplace.medium-format

etc etc

3) People that were using the newsgroup to supplement their
income were the ones that complained most loudly, getting to the
gutter at the drop of a hat and whining about the _net police_ (after
all, their pocketbook was being affected). Just like we've seen here.

4) The only effective deterrent to the for sale, for auction spam
in the newsgroup is for people to boycott the sellers, which I don't
think is going to happen here (but did seem to happen in rec.photo).

5) Lastly, the charter can be changed for _any_ newsgroup. There
is a charter change submission, an announcement to the group for the
requested change, a call for votes of the newsgroup population, and,
finally, someone actually counts the votes for the requested change.
The charter can be changed, but only by someone who will take the job
and put forth alot of effort.

I have an old SX-111 which has not been used in years and have been told that it would be a good idea to power it up slowly using a variac. This seems like sage advice to me, but variacs are expensive and I have no other use for one.

Could I use a triac (i.e. a simple light dimmer switch) which I happen to have in the house? A friend used one on his TV when his generator was putting out too high voltage.

Thanks in advance,

davo

Hi Tom.
The "reserve" is a concept as old as auctions themselves.
It is designed not only to protect the value of the seller's
property against unforeseen happenings but, more importantly,
to overcome the human psychological "block" against being
the first person to place a large bid. A person who would
ultimately pay $100 for an item is unlikely to open the bidding
for that item if the first bid must be, say, $75.
Crazy as that seems, the item will usually close without bids.
To overcome this problem, a person will set a reserve at,
say, $80 and open the bid at $1 or so. Everyone understands that
the item isn't going to sell for $1, but many people will
open with small bids and compete until bid closing.
Why are people that way? Who knows? We just have to
take it into account, and that's what the reserve does.

Good luck and kind regards,
Dave S.

>
Huh! Didn't know such a movie was even planned. Thanks for the tip!

U-505 was boarded and captured during WW2. It's now on display in Chicago. So
the story has some merit.

But stealing such a machine could be counterproductive unless it's done right.
If the other side figures out that you have one of their machines, they will
simply build a new machine of different design and your effort was largely
wasted. And merely having the machine doesn't solve the problem of figuring out
the rotor and jumper settings.

Hi Greg
This component have inside 4 (four) independent capacitor with common ground lead. Replace externally only the bad one or all of them. You can identify the values by the sign close the leads. Normally a circle, a triangle, a square etc. and check the value printed at the house.
Keep the same value for insulation tension.

Good luck

Ricardo

>> One of a small handful of the remaining WWII German Enigma encryption
>> machines was stolen

> ...ancient crap who cares!

Success in breaking the German codes was an essential element in the victory over Nazi Germany. Absent the codebreaking, it's likely that England would have fallen and Europe would have been dominated by the Nazis for a very long time, possibly until the present day. Ancient, yes; crap, no. Millions died to defeat Hitler so that you could sit in safety and plenty, making snide comments about things you obviously know nothing about. He who does not know history is destined to repeat it.

>Thanks in advance,

No. Lamp dimmers are designed for (primarily) resistive loads. Your power transformer will not like steep front asymmetrical waveforms being thrown at it.

Lacking a variac, simply take an old extension cord, clip one wire somewhere, and connect the ends to a ceramic single lamp receptacle you can get at any hardware store. Plug the set in to the extension cord, the other end in the wall, and the bulb is now in series with the set. Start with a 60 watt bulb. It should glow brightly at first, then gradually dim. As long as it does NOT remain at full brightness, increase the wattage of the bulb in stages. Last stage would be to use an old style screw-in fuse. (if you can find one)

The reason the dimmer works with a TV is because most modern TV's do not have power transformers. However, the next TV you try to run through a dimmer may go up in smoke.

> Huh! Didn't know such a movie was even planned. Thanks for the tip!

It opens 21 April. See www.u571.com.

> But stealing such a machine could be counterproductive unless it's done right.

Several such events occurred during the war; the most important was the recovery of the 4 rotor naval enigma. Even though they knew that some machines had been captured, the Germans believed their communications secure right up until the end of the war. The Allies engaged in elaborate deceptions to give the Germans reason to believe that we had some other source of information. For example, learning of a German convoy from the Ultra intercepts, the Brits would make sure they flew a spotter plane over the convoy before attacking. The purpose of the plane was to be sighted by the convoy so it would seem we had found it that way, and not be codebreaking.

> And merely having the machine doesn't solve the problem of figuring out
> the rotor and jumper settings.

It did reveal the wiring of the rotors, which was an essential part of the solution. The keys and jumper settings were recovered partly by brute force using the Bombe and Colossus devices. However, the Germans made many errors in the use of the Enigma machines, especially in selecting the keys. These errors were the real key that allowed the codebreakers at Bletchly Park to routinely break the codes. Had the German radio operators used Enigma as it was intended, it would have been much harder to break. See "The Hut Six Story" by Gordon Welchman ISBN 0947712348 for details on this aspect of the code war.

Looking for a couple of parts for a Heath MT-1 transmitter.
Need one medium-size knob (satin finish, not chrome), and
the glass "window" that covers the VFO dial drum. Could
also use a cabinet that doesn't have extra holes drilled
in it. Oh, almost forgot... need a manual/schematic too
(good clear photocopy would be fine). I've located the
schematic on line, but it's HUGE, and if I scale it down
to fit a printer, even in pieces, it loses all of its
resolution.

Read what a televison commentator from Toronto has to say on this
subject.

by Gordon Sinclair

"This Canadian thinks it is time to speak up for the Americans as the
most
generous and possibly the least appreciated people on all the earth.
Germany, Japan and, to a lesser extent, Britain and Italy were lifted
out of the
debris of war by the Americans who poured in billions of dollars and
forgave
other billions in debts. None of these countries is today paying even
the
interest on its remaining debts to the United States. When France was in
danger of
collapsing in 1956, it was the Americans who propped it up, and their
reward was
to be insulted and swindled on the streets of Paris. I was there. I
saw
it.

When earthquakes hit distant cities, it is the United States that
hurries
in to help. This spring, 59 American communities were flattened by
tornadoes.
Nobody helped. The Marshall Plan and the Truman Policy pumped billions
of dollars
into discouraged countries. Now newspapers in those countries are
writing
about the decadent, warmongering Americans. I'd like to see just one of
those

countries that is gloating over the erosion of the United States dollar build its
own airplane. Does any other country in the world have a plane to equal the
Boeing Jumbo Jet, the Lockheed Tri-Star, or the Douglas DC10? If so, why don't
they fly them? Why do all the International lines except Russia fly American
Planes? Why does no other land on earth even consider putting a man or woman on the
moon?

You talk about Japanese technocracy, and you get radios. You talk about
German technocracy, and you get automobiles. You talk about American technocracy,
and you find men on the moon - not once, but several times - and safely home
again.

You talk about scandals, and the Americans put theirs right in the store
window for everybody to look at . Even their draft-dodgers are not pursued and
hounded. They are here on our streets, and most of them, unless they are breaking
Canadian laws, are getting American dollars from ma and pa at home to
spend here. When the railways of France, Germany and India were breaking down
through age, it was the Americans who rebuilt them. When the Pennsylvania
Railroad and the New York Central went broke, nobody loaned them an old caboose.
Both are still broke. I can name you 5000 times when the Americans raced to the
help of other people in trouble. Can you name me even one time when someone else
raced to the Americans in trouble? I don't think there was outside help even
during the San Francisco earthquake. Our neighbors have faced it alone, and I'm
one Canadian who is damned tired of hearing them get kicked around. They will
come out of this thing with their flag high. And when they do, they are
entitled to thumb their nose at the lands that are gloating over their present
troubles. I hope Canada is not one of those." Stand proud, America!
Wear it proudly!!"

Hi all.

Looking to find (buy) the following:

1. Drake FF-1 Crystal unit for TR4cw transceivers.
2. External crystal cover (sheet metal) for Drake R4C. It's the one
for the band crystals, not the crystal filters.
3. Drake R4C NB Brackets
4. Drake R4C sheet metal cover that goes over the filter switch.

Any all help/leads is appreciated.

Regards;

Neil, N1DMA

Well after all these years it sure looks like the propaganda (crap!)still works!

exploit a very small piece of intelligence and the Box office makes millions over the supposed controversy. The germans did it less than 10 days after the Enigma machine was compromised!

Yep I am grateful for the agents that gave there lives and first hand intel through espionage not exploited Enigma
machine. Come on people wake up! Just another analogy of the truth. No not ungrateful just realistic!

No short memories here. Read the files,they are available, if you don't know how than its best to remain silent
ya think?

Yes certainly Millions died, but it was not thanks to the infamous Enigma machine. That's my only point!

Who knows? maybe one would certainly pull a stunt like this for the publicity of a movie???????

Yes propaganda still works.

If it is in good condx. externally and working, about 35 quid.
You will almost certainly need to replace all the leaky paper caps. to
get it up to full sensitivity.
I bought one six years ago for ï¿½25 and sold it about 18 months later
for ï¿½35, having done nothing to it. I still miss it, but I'm glad of
the liberated space.

I have two vacuum variables FS:

First unit is a Jennings rated at 10kv at 375pF. Has been hi-potted to 14 kv. Works FB. $95 shipped lower 48.

Second unit is a motorized 5kv 1000pf unit. 10-1000 pf range. Motor runs on 24 to 28 vdc. Works great. Heavy duty gearing and built very nice. Also is $95 shipped.

Will sell both for $165 shipped lower 48. Good for tune and load on n RF amp.

Hi Mike,

If it's in fully working, really good clean condition, around 60 to 80 U.K.
Pounds.
Beware greedy traders who ask silly prices of 100 pounds or higher.
There are hundreds of these receivers around,so if you don't like what you are
looking at for the asking price, leave it. Sooner or later you will get a good
'un at the right price.
I picked up an AR88 in first class working condition, well looked after, for 70
quid last year at the Spalding rally.
The only drawback with them is that you need to tighten your trouser belt and
bend your knees before attempting to pick one up.(110lbs) I think in
weightlifting terms it's called "clean and jerk"! :-)
I hope this helps.

You may get a good one for 35 quid but unlikely. These days they go for
more like 60 to 70 if very good and 30 to 50 if complete but tatty.

Things to look out for:

Yes the block capacitors could need replacing but many, mine included,
are still on the originals and working ok.

Is the output transformer ok. Many of these are duff where people have
run them without LS or phones. They are difficult to source now, I have
a spare but I wouldn't part with it in case I break the one in my set.

Ideally you want all of the right valves. Most of them are metal can
ones, over the years some may have been replaced with glass, there are a
couple of glass ones any way but those will be marked on the chassis as
xxxxx-GT or G. make sure all the ones that aren't GT or G are black
metal cans. If they aren't then replacement isn't a problem, just a bit
pricey if you have to do the whole set.

Does it come with an S meter or has it got the AR88D logo in place. A
lot of Ds were fitted with S meters, some very inexpertly, either make
sure that it was a factory fitted one or it has the logo in place.

Knobs, canbe difficult to source, make sure none broken.

Mains smoothing cap, big grey thing at back of cabinet, make sure it
doesn't leak. You can't replace these for love nor money so if it is
leaking then you will have to put in some electrolytics instead.

Is it relatively well calibrated and do all of the potentiometers,
bands, noise limiters and filters work. realigning the RF section isn't
too bad to do. You don't want to get into the IFs unless you have
access to a wobbulator.

Have a look underneath. It should be clean, wiring harness intact and fairly tidy in the way all of the cables are routed. Any signs of odd wires and dodgy joints are a bit worrying.

Is the screening in place underneath around the RF stages.

Is the screening box over the LO and tuning cap on top of the deck in place.

Are the tuning tools present (Two long rods with thingies on the ends for playing with the caps and coils. Should be in jubilee clips somewhere on the top deck.

Last but not least, is there a manual, useful and could cost you up to 10 - 15 ukp to source elsewhere.

Hope this helps

Robin

PS If despite all of this you buy the thing then have fun. I've had mine for ages and it is still a good general purpose communication receiver. Ok it isn't an RA17 or one of the digital super beasts but it is a very nice reliable set that you can have fun with even though most of them are over 55 years old!!!!

Cheers

Robin

PS. I think someone a few years ago calculated that the production cost for one of these, allowing for inflation and the like, was about 1,500 ukp in today's cash.

I'd say about 50 pounds (works out at about 50p per pound weight). You
need to have a manual or at least
a cct diagram and hopefully some spare valves. Ensure that the tuning drive
is free of backlash, it should be
this is best checked by tuning in an ssb station and noting the reading on
the logging dial (central dial)
and then trying to tune it in again and see if the same dial setting works.

You will need to reduce the RF gain control to copy SSB signals properly as
the AR88 was built well
before SSB was a standard mode of transmission.

The receiver should be very sensitive and should be reasonably stable.

Look to see if you have the trimming tools mounted in clips on top of the
housing for the tuning capacitors
there are a couple of clips on the housing which should contain the tools,
you need at least the tool to
adjust the slider capacitors, this is a brown tube about 1 cm in diameter
and about 15 cm long with a
metal hook on one end and a box spanner on the other.

The AR88 is still an excellent receiver as long as you can live with the
fiddling when tuning in SSB signals,
the RF performance actually compares quite favourably with a lot of
transistorized receivers.

>nothing about. He who does not know history is destined to repeat it.
>
BRAVO!! Well said and absolutely true!

There were times in WW2 when the Nazis had the war all but won. It took
everything the Allies had to defeat Hitler's war machine. Code breaking was a
big part of that - as was radar, the proximity fuse, and several other
technological innovations. Code breaking helped win the Battle of the North
Atlantic - and if that battle had been lost, Great Britain would not have held
out.

There were at least two periods when the Allies were losing shipping to U-Boats
in greater numbers than they could be replaced. Had that kept up, England would
have been starved into submission. Codebreaking played a key role in decreasing
the U-boat effectiveness.

In the Pacific, US Navy submarines largely succeeded in doing to Japan what
Germany had tried to do to Great Britain. Codebreaking played a big role i the
Pacific theatre, too. Without advance knowledge of the attack on Midway that
was obtained from intercepted messages, it's quite possible Midway would have
been captured by the Japanese.

There are plenty of other examples.

"Who cares" about such "ancient c#$p"? Anyone who cares about freedom.

Was that from U-505?

>Even though they knew that some
>machines had been captured, the Germans believed their communications
>secure right up until the end of the war.

Yep - and in theory, at least, they were right. ENIGMA really WAS secure if it
was properly used and only conventional resources were used against it.

>The Allies engaged in
>elaborate deceptions to give the Germans reason to believe that we had
>some other source of information. For example, learning of a German

>way, and not be codebreaking.

There was an excellent NOVA on the subject, and that very ruse was described.
The amazing thing is that nobody ever got wise to it.

It would have been simple for the Germans to send a couple of fake messages
about nonexistent convoys, then send a scout plane to the phony convoy
coordinates and see if any Allied spotter planes "just happened" to show up.
But, to my knowledge, they never did anything like that.

>> And merely having the machine doesn't solve the problem of figuring out
>> the rotor and jumper settings.
>
>It did reveal the wiring of the rotors, which was an essential part of
>the solution. The keys and jumper settings were recovered partly by

Yep. The "Bombe" was presented as Alan Turing's brainchild in the NOVA episode.

>However, the Germans
>made many errors in the use of the Enigma machines, especially in
>selecting the keys. These errors were the real key that allowed the

>German radio operators used Enigma as it was intended, it would have
>been much harder to break. See "The Hut Six Story" by Gordon Welchman
>ISBN 0947712348 for details on this aspect of the code war.

Thanks! This aspect was discussed in the NOVA episode, too. For example, the Germans would use rather common phrases for the keys, rather than truly random sequences.

There's a very important lesson to be learned from all this, and it applies far beyond message encryption. The big mistake made with ENIGMA was putting total faith in the security of the system, assuming that it could never be compromised. This led to carelessness in using the system and a tendency to blab everything, even stuff that didn't need to go on the air. Blind faith in technology often leads to disaster. (I live a little over 100 miles from Three Mile Island...)

But even our side made mistakes. Rommel was required to send all sorts of detailed reports to Hitler, practically every day. These were intercepted and decoded, and the info forwarded to Montgomery. But Monty doubted its accuracy and would not act upon it immediately. The defeat of Rommel was delayed because of Monty's failure to act - but he could not be told how the info was gathered.

Thanks again for the info, Mike. Fascinating subject.

> Yes certainly Millions died, but it was not thanks to the infamous Enigma machine. That's my only point!

What in the world are you talking about? The greatest achievement of the Enigma code-breakers was intercepting the communications between German submarines in the Atlantic and their commanders in Europe. That knowledge made it possible to keep the sea lanes open, arm and supply England, and later stage the D-Day invasion. Without Ultra (the Enigma intercepts), those sea lanes would have failed, and England would have likely fallen, or at least could not have been used as a staging base for the invasion. There would have been no second front, the entire German army would have been available to counter the Russian advance in the East, and Europe would have been in Nazi hands indefinitely. Ultra made it just possible for England to hang on long enough for America to enter the war and turn the tide. Ultra was a cornerstone of the Allied victory; there were many other essential elements as well, but without Ultra the Allies would have failed.

Has anyone written a revisionist history of WWII, it's commanders,
strategies and battles based upon the impact that those sources of
intelligence had. For instance, how does Patton, Eisenhower, Roosevelt,
Bradly and that English guy hold up when their accomplishments are
viewed from the standpoint that they had stunning advantages over their
opponents derived from cracking cipher from Enigma?

So what are you saying? There really wasn't a WWII?

> exploit a very small piece of intelligence and the Box office makes
> millions over the supposed controversy.

Very small piece of intelligence? The gaining of that intelligence had a
significant effect on every aspect of the European and African theaters.

> The germans did it less than 10 days after the Enigma machine was
> compromised!

Did what? They never knew until well after the war that it had been
compromised.

> Yep I am grateful for the agents that gave there [sic] lives and
> first hand intel through espionage not exploited Enigma machine.

So, your point is what? That capturing the Enigma was nothing and that
only ground based, in country intel contributed anything?

> Come on people wake up! Just another analogy of the truth. No
> not ungrateful just realistic!

What conspiracy are you working on here?

> No short memories here.

Yeah, all the way back to, what, about 1960?

> Read the files,they are available, if you don't know how than its best
> to remain silent ya think?

This is excellent advice. I suggest you take it. You are clearly
uninformed on this subject.

> Yes certainly Millions died, but it was not thanks to the infamous
> Enigma machine. That's my only point!

Please clarify it then. And cite empirical evidence to support your
assertion. Perhaps personal experience...

> Who knows? maybe one would certainly pull a stunt like this for the
> publicity of a movie???????

Ahh, yes. That whole WWII thing was just to get some good story lines so Hollywood could make money. I heard that Pearl Harbor was done on a sound stage; whadda ya think? I bet we didn't really go to the moon either, huh?

> Yes propaganda still works.

MIT is the typical example of the greedy ebay seller, he dosen't care about any rules, charters or using common sense (can't use something you don't have). After all the debate over on the rec.antiques.radio+phono newsgroup about ebay ads, and the overwhelming majority of the active participants clearly stated that such ads are NOT WELCOME, this stupid brain fart posts another one. He accuses those who complain about his ads as being crybabies, yet all he has ever done on the RAR+P group is whine and cry when anyone complains.

Gentlemen:
This argument has been long settled on the ham news groups.
A couple of people are trying resurrect it and demand
they dictate what may and may not be posted.

What we DO NOT want is more of your bickering!

Please take this to some other group that wants to keep
cussing and fussing with each other. We've had
our fill of it here.

Doug,

That loud smacking sound you hear is me hitting my forhead. Too simple and the parts are all in my junk box. I even have bulbs as low as 40 or 20 watt to start off with. And a lifetime of the old screw-in fuses (two styles of bases + adapters).

This receiver was given to me by my late father-in-law, K5EOI, as a gift for my passing the 5 wpm code. He used this radio to contact the outside after hurricanes Betsy and Camille both devastated Plaquamines parish. It was also the one on which he received an SOS and coordinated having anti-venum serum airlifted to a snake bite victim back in the late 50's or early 60's. Hope the history doesn't bore you but this is why I'd like to see this rig back on the air.

Thanks,

David - KB5TJP

A friend, KB6ACP, who is not net active needs two Yaesu crystal filters.

XF 30 B AM Filter, and XF 30D FM Filter. He said these are for an old FR-101 radio, or could be a typo and means an old FT-101.

He was told these are interchangable with the Heathkit filters for the A-6200 radio.

Let me know if you have any, and the price and ect. I will print and pass the information to him.

Vern, N7SPK

Well said again, Mike. But the situation might have been even worse than you describe.

Had England fallen, Nazi Germany would have controlled not only Europe but all of the Mediterranean, including North Africa and the Middle East, the Suez Canal - and all that oil. Who knows what would have become of Australia, India, South Africa and other parts of the British Empire?

The Nazis very probably would have defeated the Soviets, and controlled most of the developed world outside of Japan and the Americas. Even if the Soviets held out, the cost in lives and years to eventually defeat the Axis would have been much higher than it was, if it was even possible.

But because of Ultra intelligence, the effectiveness of the U-boats was countered, and the supplies got through.

Correct me if I'm wrong on this, Mike, but as I recall, there was at least one time during the war when the ability to break Enigma was lost (I think it was when the four rotor naval Enigma was first introduced). The result was a sudden and very serious jump in Allied shipping losses that did not end until the new code scheme was broken again. Without Ultra, the whole war would have been like that.

That does not describe many of the Americans I know.

Sure, there are a few who say "who cares" and "ancient history". Some of them actually mean it, too. But many of the Americans I know have at least some interest in history if it is explained in an interesting way that shows how it came to shape and affect the present.

Well... just questioning the value of those commanders when viewed from the standpoint that they possessed critical intelligence that virtually allowed them to know every detail of their opponents battle plans and operational status. Consider, if the allies had access to high level communications from Hitler down the chain of command to field commanders and that the allies won by the 'skin of their teeth' (as claimed by some) it allows that the allies weren't really that well off with regard to their commanders.

The first book I read about Enigma was back in mid-seventies authored by Winterbourne which claimed to be the first public disclosure of Enigma. Up until that time Enigma had been a closely guarded secret and the volumes of histories on WWII war were written (analyzed, studied and taught) without that element in mind. It begs the question, how well off were the allies---what is the revised history of WWII when intelligence from Enigma is factored in?

In hindsight, it is interesting that 'Pappy' Boyington in his book on the Black Sheep Squadron (written before Enigma was public) wrote that all hell broke loose and quite a stir was created in security circles when he, in Australia for R&R, unknowingly mentioned in a bar that the US must have had some secret intelligence to be able to shoot down Yamamoto since the odds of a successful mission were so great. David Kahn wrote in _The Codebreakers_ that downing Yamamoto was a close as it got to letting the Japanese (and most likely Germans by association) know that their ciphers had been compromised.

This rasises another question, how many were allowed to die, civilians and military, when it was known they were at risk based upon intelligence from Enigma? For example, wasn't Churchill aware of the bombing of Conventry but did not evacuate that town from fear of tipping off the Germans that the allies were intercepting their enciphered communications?

If, when comparing apples to apples, (or dollars to dollars, as is the case here) European gas prices are indeed 3 times US cost, what causes this to be?

Certainly the gas / oil prices in the US represent a profit to the Evil Oil Companies.

(not that this has anything to do with radios, excpet as the price of gas goes up, my TOY budget goes down :^)

Hi folks,

Other than Dayton, are there any other two or three day events later in the year or is Dayton the only one of this stature? I will hopefully be coming over to Dayton in May but I am also interested in visiting more of the same throughout the year. Are there any web sites where hamfest data is located? I have managed to find a few but nothing that covers more than specific events.

All help gratefully received.

Jack: Checked my box. No luck. I think this is a REAL long shot for
you -- I was looking for some rocks in this range a while back for the
crystal filter in my MM HB RX. One major crystal manufacturer wanted
75 bucks for the crystal. Ouch! Several very kind hams offered up
old surplus rocks, but it turned out that they had deteriorated badly
since the war...

I finally gave up and used a 455 kc IF transformer instead of the
filter. You might want to consider pulling a 455 kc filter out of a
junked CB set.

Hi,

I have some brand new PD 500 and PD 510 valves in stock. They are all NOS and in original boxes. Mostly Philips and Siemens brand.
These are modern HV regulator triodes for colour televisions, and can handle an anode voltage of 25 - 30KV. Max anode dissipation is 30 - 40W. Magnoval (B9D) base. This is about the same type of valve as the USA 6BK4

E-mail me if interested.

Regards,

Arnold Goks�yr

For Sale,

Tempo One vintage HF transceiver.

Later model with black face.

Covers 80, 40, 20 15 meters and 28.5 to 29.0 part of the 10 meter band.

Requires optional crystals for complete 10 meter coverage.

Very good condition and fully working.

Output tubes are very strong and easily produce rated power output.

Comes with original manual.

$180 US plus shipping.

Please reply to csc@smartt.com if interested.

This amp was a Japanese import around 1978. uses a pair of 3-500Zs. Entire amp weighs 90 pounds. Amp and PS are all one piece. Runs 3500 volts on the plates. 120 watts of drive gives 1500 watts out 160 to 10. The original bandswitch is bad. I have a JVC 9000 type for a replacement that is two wafers deep. This will fit in the same space as the original but I do not think the indexing matches the origianl therefore the tuned input switch will have to be bypassed. The tuned input switch shaft piggybacks the main bandswitch shaft and I am sure the indexing of the new switch does not match. For now you will have to bypass the tuned input or??? I have the original bandswitch almost entirely removed already. have copy of the manual which is poor but scat is intact. Front panel and cabinet are real clean.

Will double box and ship UPS ground. Price is $500 with the tubes or $350 w/o the tubes. Buyer covers UPS charges on 100 pounds (amp double boxed with packing material) from 92139 San Diego. Be warned that shipping is not cheap.

I spoke today to friend and military boatanchor radio restorer extraordinaire Rick Mish, of Toledo Ohio. Rick has located approximately 20 R-390 (not R-390A) receivers from a single source, and these receivers are not junkers. Rick is considering buying all of them for a large scale restoration project for those who seek a top-notch R-390.

Before he goes forward and buys all 20 radios for restoration and resale, Rick would like a "critical mass" of commitments to purchase.

Rick does this restoration work full time. As a customer of his services, I can vouch that his work is top notch, and he has the necessary skill, experinece and equipment to get this gear working equal to or better than new.

Rick can be reached at 419-255-6220

(I have no interest in this venture, other than as a prospective customer for one of the R-390 units Rick intends to buy, restore, and resell.)

73, Ray K1XV

> since the war...
>
Is it really $75 to get a crystal ground now, or was there something special? I know things have gotten more expensive, but there was a time when there were multiple price ranges for crystal grinding, depending on how important the crystal was.

Of course, it was always more espensive to have a crystal ground to a specific frequency than to use a crystal made in large quantities, which is why surplus crystals were so popular in years gone by, and nowadays "common microprocessor crystals" are easily available and cheap.

Crystals around 455KHz always semed to be harder to find, except for FT-243 surplus crystals, which were in that range because they set the frequency for a transmitter. This is why there was once plenty of well-spaced crystals for making SSB filters at 455KHz.

If one does come across a suitalbe FT243 crystal, one thing worth trying would be to open it up, easy since it's held together with screws unlike HC-6 crystals, and give it all a good cleaning inside. They are held together mechanically, and thus suffer the same as any mechanic al connection that old. I've never tried cleaning a crystal, so one would have to look up the details from the era when FT243 crystals were common. Maybe in an old edition of Hints & Kinks or articles about crystal grinding.

> I finally gave up and used a 455 kc IF transformer instead of the
> filter. You might want to consider pulling a 455 kc filter out of a
> junked CB set.
>
I can't visual the specific receiver, but I assume the crystal is used in a standard one-crystal filter with a variable capacitor as a phasing control. So it will have relatively narrow selectivity (depending on how it's loaded, which might be part of the circuit to allow different amounts of selectivity), but it will not have good skirt selectivity.

One thing maybe worth trying is to use a 455KHz ceramic reonator in place of the crystal, assuming it is that type of circuit. People have

mentioned in rec.radio.amateur.homebrew using those resonators in place of crystals, though I don't recall anything about this type of circuit. And I think the resonators are fairly available, including from Dan's Small Parts (though I don't have the URL handy).

If one wants the function of the radio, rather than simply to restore it, those ceramic resonators were often shown, when they first hit the market, as the bypass element across the emitter resistor in transistor circuit. maybe they would work out in the cathode(s) of the IF amplifiers, taking out the existing bypass capacitor and using the ceramic resonator in it's stead. If there's more than one IF amplifier, try one stage at a time.

Or treat the existing crystal filter as a module, and bypass it. Use a ceramic filter from a broadcast radio, or for better selectivity, from a CB set, as a replacement for that "module". It will probably require some matching. You won't get as narrow selectivity as the single crystal will give, but it will give you better skirt selectivity than an IF transformer, and the selectivity will be better for voice.

This radio is in good condition with the Collins sideband filter installed. It also comes with the service manual and owners manual....these are original...not copies.

I have looked inside the rig it appears to be all original. It does work, quite well actually, but does need a going over.

The mic that comes with is the origianl SBE hand mic. I have not tried the unit on 12V as I only have the AC cord for it.

Cabinet and front panel are in clean and in good shape. I can send a pic to serious inquires. Price is $225 plus shipping. Prefer M.O.

Thanks,
Chris

The US version of the RA-17 was the RA-17 C-12. Had 6AU6 instead of EF91,
6688 in place of E180F 6AS6 inplace of 6F33 and 6BA6 inplace of EF93. It
also had a proper S meter.
There was also the RA-71 made by Racal Communications Inc. Silver Springs MD
which had further changes, including a product detector.

I'm sitting here without a manual for my Racal. When I do the self test (Lock and AM button push) I get an error code 15.

Anybody have any idea what it's trying to tell me ? The radio seems to work fine, but it's trying to tell me something ....

Thanks!

Bob

If I weren't already the proud owner of a Stewart-Warner R-390A (20139-PC-60, #835), I would jump at the opportunity. I sent my rig to Rick about a year ago to be fully rebuilt, and I too can vouch for the fact that Rick's skills are remarkable. Looked like it just rolled off the assembly line, and probably performed better than the day it did. It has since drifted out of alignment, which is not uncommon. I wouldn't trust it to anyone else, and he offered to re-align it for free, so I'll be sending it back to him soon. He's a genius with these things.

Anyone have a big box?

it sounds like a short in the b plus..
first remove all tubes except recitifier..
if that solves problem high current draw, it's a tube..
if that's not it look for a shorted audio output xfmr or some bypass
capacitors..
i trust you have sschematic..
good luck and let us know your progrss..

Hi,
It is getting very difficult to find new 500V caps. Therefore the only solution is to use 450V caps which is being used for Power factor correction switching power supplies. Since you use 8 of them, it will make the total voltage to 3600V which is more than enough to handle 572B's because the maximum voltage to this tube is 2500V. You can actually improve the power supply high voltage regulation by using larger capacitance caps like 220 uF. New technology enables the size get smaller so you can find the same size as the original ones with twice the capacitance. You can try electronics distributors like Future electronics for Rubycon, United chemicon,Elna,Nichicon who makes excellent quality parts.

Good luck.

For those interested in the U-505 and Enigma, a good start is:

http://www.msichicago.org/exhibit/U505/enigma.html

Also check out the spacious radio room! I wonder what they did about
maintenance?

Come on now with you! Don't get your undies all up in a wad. Take a
spoonful of Marmite why don't you... sit back, relax, have a fag!

On this side of the pond many would think Montgomery would deserve the
distinction of being called 'that' English guy.

A common misconception on Ultra is that we knew everything they were doing and saying. One of the problems with handling Ultra intercepts was the sheer volume of information. It couldn't all be acted upon.

Also, much of Ultra, particularly in the Pacific, was more of a sense of what was going on, a suspicion, rather than hard data. During the times that the Japanese Naval code was changed, a fair, but not as clear, picture of what was going on was still maintained by signal analysis (who's transmitting and how much traffic).

In the case of the Ardennes offensive, the Germans did a very good job of not generating much traffic regarding it, not to mention that we didn't think they had the resources (or history) to mount such an offensive. Further, if first line troops had been there instead of raw replacements, AND, if the weaather had been good for air cover, the offensive might have been stopped before they got very far.

My point is there were a lot of things that made the Ardennes offensive successful, but lack of good Ultra probably didn't contribute much. Keep in mind, that if your mind is set to believe that the enemy can't mount an offensive, it's difficult to believe data that says they are.

433. BAMA April Update from K4XL

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-09 00:00:00 UTC
From: "Kenneth D. Grimm" <grimm@NOSPAMlynchburg.net>
Message-ID: <fmnves83ufisjkfaia6hlfq36r46g2svp3@4ax.com>
Source record: 68414

The following have recently been ADDED to the BAMA collection:
Manual for Alliance HD-73 from Jim Foster, NN7K.
Schematic for Drake TR-3 from Al Parker, W8UT.
Manual for Eico 720 Transmitter from Jerry Lunday, K5SOP.
Manual for Eico 723 Transmitter from Don Gilson, KC7YDB.
Manual for Eico 730 Modulator from Jerry Lunday, K5SOP.
Schematic for Gross UPH-2 from Norm Hall, W6JOD.
Riders and additional info on Hallicrafters S-10 and SX-10 from
Jerry Daugherty, W9FS.
Schematic for Heath HA-10 amp from Don Stalkowski, VE3HUR.
Schematic + for Heath HD-1420 from Ken Kaplan, KB7RGG.
Partial manual for Heath IG-18 from ?
Schematic for Heath SB-630 from Erick Walters, KE1LW.
Schematic + for Heath SB-644 from Erick Walters, KE1LW.
Manual for Henry Tempo One from David Colburn, K1YP.
Manual for Johnson 6N2 Transmitter from Sheldon Wheaton, KC0CW.
Partial manual for Johnson Adventurer Screen Modulator from Gary
Schafer, K4FMX.
Partial manual for Knight Kit R-100 from Russell Hall, WB4OFN.
Partial manual for Knight Kit T-150 from Russell Hall, WB4OFN.
Manual for National HFS from Jim Roik and Alan Bird.
Booklet: Instructions for the HRO Series of Radio Receiving
Equipments Including HRO, HRO-5, HRO-5R, HRO-M, HRO-MX, HRO-M-RR,
HRO-M-TM, HRO-SR, HRO-JR from Ed Lambert, K1ZOK.
Manual for National HRO-60 from Brian Waldron, WB8JEA.
Manual for National HRO-500 from Mike Sullivan, KC2KJ.
Manual for Pilot Super Wasp from John Dilks, K2TQN.
Manual for RCA CR-88 from Mike Sullivan, KC2KJ.
Manual for RCA CR-91 from Tony Strike, G8AUX.
Manual for RCA WV-77A Junior Voltohmyst from Bob Zorn, KF3DF.
Manual for RME 4350A from Gary Schafer, K4FMX and Michael Tallent,
W6MXV.
Info on Swan Mark 6 Linear from Jim Foster NN7K.
Manual for WRL Globe Chief 90 Transmitter from Don Gilson, KC7YDB.

All of these and almost 400 other manuals on the BAMA site are
available free of charge (including shipping and handling.) They are
provided by boatanchor enthusiasts who have taken the time to scan and
upload their manuals. They may not be as good as those you can
purchase from manual vendors, but they may be good enough for you to
get your old boatanchor working again. Download them from BAMA at
http://bama.sbc.edu

On BAMA's NEEDED list at the moment:
Drake 1A and 2A

Gonset 3089 VHF Amplifier
Gonset 6 meter "Sidewinder"
Hughes-Mitchell X-EC Frequency Control
Hallicrafters HA-6, S-20, S-22, S-51, S-120 and SR-46
Hammarlund Comet Pro
Hickok 1890 Transistor Tester
Johnson Viking 500 schematic and page 1 of manual.
Knight R-55
National NC-100ASD, NC-173 and NC-190
National HRO-5A Manual, Tech Info, voltage ref. etc.
National HRO-50 (There is one in 4 zip files with the 4th
zip file no good. Anyone have a good 4th zip file or know the
originator of this?)
Panoramic Co., Panadaptor
P&H Electronics LA 400C Amplifier
Precision 202 Signal Tracer
REDI-KILOWATT keyer model 401
RME 69
Superior Instruments 650
TMC SBT-350 Transmitter

If you have any of these that you would be willing to share, please
scan and upload them or drop me a line to make other arrangements.

Thanks to all who have supported this cooperative effort!

73,
Ken K4XL

Try also: http://www.recelectronics.demon.co.uk/index.htm

When looking at model numbers, keep in mind that US manufactured models generally started with a "6"...that is the RA-1217 is made in UK, the RA-6217 is the American version. The prefix for Canada is "8" (the 8772 was made in Canada, the 6772 in the US, and the 1772 was made in the UK). Yes, there are differences between them...transformers and PS components as a START, but more.

if they're the same voltage they'll improve regulation...
one thing i'm not sure of is whether or not the recitifer pack can
withstanding the greater surge when you first turn it on..
if it can't it'll short and you can always replace it with newer higher rated
diodes..
or do it at the same time..
you could install a small resistor preferably a globar if they still make
them..
good luck
hank

Would tend to decrease power supply ripple, and slightly increase B+.
However, the increased charging current may be hard on the rectifiers unless
you use a step-start or other inrush current limiting scheme.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-10 00:00:00 UTC
From: waynepk@sprintmail.com
Message-ID: <38F1342E.12CAB516@sprintmail.com>
Source record: 68271

Anyone care to share any already invented wheels before I start digging in? Symptoms are no audio other than the PS choke gurgling as it boils out wax due to something drawing ~650ma of Ip. Plate voltage gets drawn down to about 80v, resistance B+ to ground about 40 ohms at the PS terminal strip. Oil filled capacitors seem to check out OK. Nothing in the radio seems to get noticeably hot other than the HV rectifier, that peels paint. With headphones slight hum is audible with AF gain wide open so I assume the problem is before 1st audio stage.
Any suggestions welcome here or munge-free e-mail address.
Tnx
Wayne

Wayne:

If the BC-342 is anything like a BC-348 then the likely problem is a shorted Micamold bypass capacitor. The Micamold units are rectangular molded paper capacitors that look like mica capacitors and have the "dot" color codes. They are famous for leakage and shorts. They may be black, brown or tan in color but if they are rectangular and labeled "Micamold" replace them. They are worse than the Sprague "Black Beauty" capacitors.

Tnx for the tip, Ed.
So that's what those things are. Only one black beauty I can see & it requires a fair amount of mechanical work to get at. I'll concentrate on the Micamold's.
The circuitry & layout are similar to the BC-348.
I have a friend who is into WW2 tracked vehicles. He was fairly impressed when I showed him how this thing was built...

Basic idea to remove tubes isn't bad but I wouldn't call it a bad tube right off. A typical scenario to your prob (in my experience) would be a shorted cathode bypass capacitor (often electrolytic) in the audio output stage. If that was my radio....I might just try pulling the audio output tube first and see what happens to your B+ and current drain. Next step would be to check for correct voltage at the plate terminal in the socket (or plate cap), verify screen voltage ok and, with everything off and discharged, check resistance from the cathode terminal to ground....not always accurate as I've seen the caps only appear as a short when voltage applied....if in doubt just disconnect one end. Often lifting one end of a bypass may cause the receiver to come back to life albeit at reduced performance (depending on where they were). If you pull all those tubes and still see the heavy drain, go to the power supply and find the output junction or lead (even better if you see several coming off of this point) and lift 'em one by one to see which B+ path loses the load - heck it might be a short in the output capacitor of your power supply!

Best of luck - Keep on Tinkering.....THAT .....is REAL HAM RADIO

481. Rackmounted PLESSEY receive antenna switch

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-10 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20000410133543.04112.00000707@ng-cu1.aol.com>
Source record: 68288

PLESSEY PV-138 Antenna switch for receive antennas. Rackmount about 1.75" high, 19" wide. This is a mil-spec antenna switch which can be used several ways. It is either 2 by 6 way (control two antennas or receivers) OR 1 by 12 way (control twelve radios or antennas to one antenna or receiver).

The switching between the two modes (2x6 or 1x12) is done by a front panel switch, which is then locked into place by reversing the front panel name plate The two switches are heavy duty, and each has a dropin holder for designations.

The rear connectors are unusual too, with the six inputs and one output coming into one large connector by the UK firm BELLING-LEE. You must uncrew connector to solder to the pins. Connector has super heavy-duty clamp to lock it place. As you can see there are two such connectors. I suggest running a set of small coax cables to a terminal strip to which you would make semi-permanent connections. (There are two connectors)

I bought this in Canada years ago, but I've gone to multicouplers so I never installed. The connectors look new, but unit itself was used, but if it is a switch, little can have gone wrong. Sold as-is however. Scuffs on front panel. Price is $65. Shipping and packing will be $8.00 in US. Money orders only.

You can view photos at this URL. You'll see a list of "albums", find the PLESSEY there, click on it, and then click on the photos to get a bigger picture: http://albums.photopoint.com/j/AlbumList?u=453256&a=4180680

you might need to put in a wire wound surge resistor to protect the rectifiers.

And a fuse to protect the tubes / amp deck if there is short.

NO MATTER WHAT Make absolutely sure the bleeder resistor is good! Else you could become a silent key. You would have 4.5x the prior capacitance. 48 mfd @ 4kv will take a finger right off!

It is a good idea to use the same voltage .... if they will fit.

> counting the number of its pages?
> 73, Jeff KH6O

My 1955 ARRL General Study Guide (11 pages) had questions like --

"Name the basic units of electrical resistance, inductance,
capacitance, current, and electromotive force."

"Why is full-wave rectification generally preferable to half-wave
rectification in a power supply?"

"Why is a bleeder resistor connected across the output circuit of a
high-voltage power supply system?"

"What radio messages have priority over all other communications?"

"On what frequencies may a licensee holding General Class amateur
privileges operate?" (Answer: All amateur frequencies!)

"What power input should an amateur station use for a particular
communication when the maximum legal input is 1 kw?" (Trick question,
Jeff, watch out!)

"What is meant by the harmonic of a fundamental frequency?"

"What is the FCC regulation regarding transmission of music by an
amateur ratio-telephone station for testing purposes?"

"What are the undesirable effects of overmodulation in radiotelephony?"

"What is the formula for finding the resonant frequency of a tuned
circuit?"

"What effect does the Q of a circuit have on harmonic output?"

Pretty similar to todays questions!

And thats the way it was!

Walter

Source record: 68297

Hello, I have a very interesting old modulator tube for sale.

A Western Electric 701A. It is used, but was apparantly re-certified by WE or the Navy with 250 hours service. The certification numbers are re-stamped on the tube. I have checked it with an ohm meter, and there are no shorts, and good filiment continuity. It has four graphite plates.
It is a little bit smaller than an 833 sized tube. It has four fat pins out the base, and one anode at the top. Has a good getter flash left, but shows some use of course.
Tube has 2 logo's,
(one orig. silver letter, and one red re-certification with hours stamped on glass) and is in excellent physical shape.
Specs as follows:

Also known as D-160810, format like 357A but contains FOUR SETS of 350A electrodes with common Mo anode, gold-plated grid and screen, fil 8.0 volts @ 7.5 amps, 12.5 kV, 100 W 10 amp pulse.

Best serious offer takes it away. Postage 4.00 by priority mail.

Please respond privately if interested...

Regards,
Joe Pratt, Tubecntral@aol.com

I have a Drake R-4C and a T-4XC for sale..The
R-4C has all but AM filter and NB, 21xxx serial
numbers..The T-4XC has 1/4 mic plug..thats the
only mod done to both these rigs,also have
cables for both..no extra crystals..23XXX serial
number. Comes with MS-4 and AC-4..New blue
filters.Both of these are very nice rigs..$575
plus UPS
I also have a B-LINE for sale..both with no
mods and very clean..with cables and
manuals..also with MS-4 and AC-3.
Copper on these look good..$350 plus UPS.
I have way too many Drake radios...Thanks Bob

Thanks Walter for listing some of the "old questions".
I had forgotten how easy they really were! They seemed harder at the time though. I would have to say that today's tests are probably a little more involved than they were back then. Now there are many more aspects of electronics covered that were not then. Space communications, digital theory, solid state theory etc.

I wish that all the guys gripping about how "dumbed down" today's test are would go back and read some of the old questions.

Best regards
Gary K4FMX

The weird thing is that the signal strength is to high for the BITE to function.
In other words when I tune to 00.0000000 the RF signal strength it off the
scale past the "12". If I disconnect the synthesizer board from the mixer
board the BITE passes. Of course with no drive the mixer there isn't much you can do with the radio.....

Drake CW STATION
I have put together a nice Drake CW station from my extensive drake collection... sold as a package deal for now....Drake 2C rcvr with calibrator..this rcvr has sharp filtering.. .4oohz..2.4..and 4.5khz for receiving AM...selectable upper and lower side band...selectable agc slow or fast. rig covers 10 thru 80. The 2NT is one great CW sounding cw rig either xtal or vfo controlled uses timed sequenced keying (grid block) and is adjustable for full breakin, etc. The VFO is a real beauty from my collection the WRL V10 uses 3 tubes has built in regulated pwr supply. this vfo is close to being mint for one thats almost 40 yrs old..you wont find one better. I have manuals for all this stuff...will also include some connecting cables for rcvr mute and side tone connection. the rest you have to get your self. All this stuff looks great and works great....$450 plus shipping for 35 pounds

Gord Skiffington <skiffing@nbnet.nb.ca> writes:

Yes. The Bc-342 is pretty easy to lift B+ stage by stage. You have a bad cap. I'd bet big money on it. I have one that one of the mica caps is shorted-- it's up inside one of the cans and would require a major tear apart to get at it. I tried burning it out with many amps. No luck. There a load of caps bypassing B+ in this thing. None of them are critical for basic operation, so isolate one at time.

>Basic idea to remove tubes isn't bad but I wouldn't call it a bad tube
>right off. A typical scenario to your prob (in my experience) would be
>a shorted cathode bypass capacitor (often electrolytic) in the audio
>output stage. If that was my radio....I might just try pulling the

Yea those boxes can cost ya. Seriously. I had to pay $15 for a
box to ship my R390a to myself once. Still have the box. Never
know when I might need it again.

My R390A is a Motorola model. I have used about all of them....
(Vietnam in the 60's and shipboard at times). I always liked the
moto's the best. Strangely enough, the Collins models were the
most undependable according to the techs I talked to during that
time. Strange, since they are all suppose to be identical to
Collins plans. I think the Collins were just older at that time
and tended to break down more often because of that. In Vietnam
we all had our favorites. Some guys would only use Collins, some
only Motos. I can't remember any Stewart-Warners in Nam, but I
did run into them and Amelco models on Army bases (I was Marine).
I wonder if the different services, Army, Marines, Air Force,
Navy, Coast Guard ordered from one maker more than another.
If so....who got stuck with the Helena Rubenstein model??? :-)
I must say I have never run into a Rubensteir model. Never seen
one for sale.

Hard? Easy? Isn't that kind of a silly way to judge an exam? Shouldn't the objective of an exam be to show that the applicant actually knows the material?

My 1949 ARRL license manual devotes only 13 pages to the electronics portion of the written needed for the top license. Here is ARRL's explanation in 1949. The philosophy is quite different than it is now. (The * are mine)

"The questions and answers in this booklet are designed to give you all the *knowledge* you need to answer correctly the actual examination questions. But it should be emphasized that the questions we list here are *not the actual questions in the license examination, nor do they correspond question for question to similar examination items*. What they are, however, are carefully prepared items *designed to insure that you have the necessary knowledge* to cope with the actual test queries."
[skip some]
"There may be several questions in the exact exam revolving around one simple discussion in this manual, *but when you understand the subject* you can readily check off the answers to any number of questions on it."

IMO the questions needed for full privileges are much less technically difficult than given in today's General Class exam. However the emphasis on *learning the material* makes much more sense than today's published question/answer engineering level manual making memorization possible (and mandatory for many non-technical people).

BTW, in the amateur radio regulations portion of the 1949 license manual, there are no questions or answers at all. They simply reprint 11 pages of excerpts from the Communications Act of 1934, leaving you to study and learn them. Refreshing...

No Ed, I think we should allow applicants to keep taking exams at a test session even if they continue to fail the exam each time. Simply charge them another $6.65 and keep handing them tests until the VE's supply is exhausted. That would be a good measure of knowledge.

Hey, wait a minute, you can already do that now. Cool man! Will I get an ARRL coupon for each failed exam?

510. FS: WE Collins 312B-4 Station Console

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-11 00:00:00 UTC
From: mc@REMOVE.sover.net
Message-ID: <38f32831.9838216@news.sover.net>
Source record: 68196
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I'm selling this for a friend. It is a winged-emblem COLLINS 312B-4 station console that includes the speaker, Wattmeter and phone patch in a cabinet that matches the S-Line and the KWM-2/2A radio stations.

It is in pretty decent condition - the front grille is very clean and the unit looks nice on the table beside the equipment. However the cabinet and trim ring do have some scratches/abrasions. It doesn't look bad but it would look better if it were painted. This is not a MIL surplus unit.

I've seen these units go for up to $400.00 and even more on ePay. However I would think that $275.00 (plus UPS) would be more reasonable for this one since it is not "MINT" and is being offered as a utility piece to be used rather than a collector's icon.

If interested please reply by e-mail.

73,

Michael Crestohl,
mc@sover.net

511. HRO-500 FS (rackmount available)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-11 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20000411094952.19164.00000934@ng-bd1.aol.com>
Source record: 68197

Selling complete HRO-500 radio; stopped working but complete, including original manual. Lights up, but nothing happens. No cabinet, as I have it rackmounted (not included). I can EMail photos.
Price $500 + shipping. If not sold by Friday night, will go on EBay. Money order due by Friday 5PM.

Here's the deal on the rackmount; it is National original, but missing several spacers and hold-in brackets. I have radio mounted on plywood board and pushed in through front opening with another block of wood. But for mobile use you'd have to make something more suitable. The purchaser of the radio can get the rackmount for $90 additional. Therefore the combo is $590 + shipping.
Again if not sold by Friday, will go on EBay as separate item, since I paid $95.00 for rackmount.

EMail replies only

512. TV7D/U Tube tester FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-11 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20000411101117.19164.00000936@ng-bd1.aol.com>
Source record: 68198

This is a TV-7D/U tube tester, with test data book. In metal carrying case, and with everything including pin straighteners, adapters, etc. However on each side of the two pin straighteners are identical brackets which are empty...is something missing? I don't know. I tried it on a 6AK5 and the tube lit up, but I cannot get the meter to move, even on LINE ADJUST, but pilot and FUSE light up. Sold as is. $200 + shipping from 11937.
I know they day after it goes I'll need it and kick myself.
I'll EMail photos to those seriously intertested.

> even when encypted by enigma.

That information was indeed transmitted via wireless, Enigma encrypted, and intercepted and broken by Bletchley Park. Churchill did indeed do nothing, allowing hundreds to be killed and thousands made homeless rather than risk tipping his hand to the Germans. Churchill correctly understood that far more lives would ultimately be saved by keeping Ultra intact.

You don't have to understand the question when the answer is given to
you. All test applicants have to do now is just memorize which answer
goes with the question.

Yes, my 61 study guide was also about the same as the 1955. As for
current tests being "dumbed down" because of learning to memorize the
right answer out of four given, the only difference then was that the
three incorrect answers were not provided with the question, only the
single correct answer. Thus the "hard" part, memorizing the right
answer out of the manual, and being able to detect it in a stealth field
of previously undefined incorrect answers. It was really rough then :)

On Saturday, May 13th the CC-AWA will
host the forth annual "Spring Swap Meet"
at the North Carolina Transportation Museum
"SPENCER SHOPS ".
.
This is a really nice museum with an operating Steam
powered train, a working "Round House",
and lots of interesting exhibits.
Bring the entire family.

The Swap Meet starts as soon as the Museum opens at 9am.
It will be in the picnic area under the shelters.

The admission to the museum and the Swap Meet is F R E E !!!!

Everyone is welcome, you do not have to be a member of the CC-AWA
to take part in this or any other CC-AWA sponsored event.

Spencer Shops is located in Spencer NC, just a short distance north
of Salisbury NC, and just off of I-85. Look for the large brown signs that
will direct you to the North Carolina Transportation Museum,
SPENCER SHOPS.

Remember Spencer Shops doesn't open until 9am, there no need to get
there early.

73,

Ron

True. But the material is harder than ever before, and making it even harder is senseless.

No one could foresee how the Coventry (or Hamburg or Dresden, for that matter) attack would turn out. No one launched a mission in Europe with the goal "we're going to start a firestorm." That it was a consequence of the attack was not planned nor predicted, on either side.

Tokyo, on the other hand...

Halicrafters S-120 Receiver with manual reprint. Nice overall with exception of crack in faceplate on upper right corner. Works, but Hummmmmms.... $40.00 plus ship

Lafayette HE-36 6m AM rig with stock Mic. Meter is not original. Fires up and seems to work, but not air tested $35.00 plus ship

Realistic Tube VHF Lo and Hi band monitor receiver. AM/FM with squelch. Knobs don't look original. Works and looks nice; above average for it's age. $50.00 plus ship

Gonset Communicator III 2m AM rigs. Have 2. Both fire up and seem to work, but not air tested. Have power cords but no Mics. One has complete rear cover, the other doesn't. Knobs 75 to 85% original. Nice units $50.00 on the unit with rear cover, $40.00 on the unit without rear cover. Both prices + ship.

Compact 5Mhz scopes. 2 units complete but not working. $10.00 each plus ship

R-109/GRC Military Receiver.. 26 - 39 MHz FM. Will need internal vibrator supply for single voltage operation (12 or 24) or can supply filament and B+ via external supply - neither come with unit. Works and looks nice; at least a 7 $45.00 plus ship

RT-70/GRC Transceiver with AM-65/GRC AF amplifier, H-33F/PT handset, 375 Control Box, 281 12v supply (inside AM-65). AM-65 shell for hombrewing project (will snap on unit or use with existing AM-65), Field Manual and some cables (Not enough to fully implement the features of the AM-65 and 375 control box. Works. RT-70 9 out of 10, AM-65 6 out of 10, 375 control Box NIB, AM-65 shell 6 out of 10, handset - 8 out of 10 on handset and connector, cord coil has lost it "spring", but not frayed or dry-rotted. $75.00 plus ship on all

R-392 RX (Jeep version of R-390) Dial indicates 00.000 through 32.999 MHz. (+.000 - .032 on all upper band edges displayed after.999 before dial stop). Serial number 103 from Federal Mfg. and Engineering. 8.5 (at least) out of 10. Also have 24 volt home-brew supply to go with it.
$175.00 plus ship (heavy).

Siltronix 1011C 10/11m Transceiver. Scratches on front face plate, chassis has oxidation and needs cleaning. Bad 8950 (no filament/ apparent burns inside). Seemed to work when a used 8950 was used to test unit. Power output low and drifts (May be typical of proper operation) With Hand Mic. Power cord and manual reprint.... $75.00 plus ship.

Fluke Differential Voltmeter (893 I think) - Works and looks good - $50.00 plus ship

HP-419 Null volt meters. Have 2. Complete, won't zero properly, operation condition unknown. Good source for precision parts. $ 25.00 each plus ship

Fluke 75 Handheld meter - tried to measure HV one to many times - Display good, case good, may be repairable $20/00 plus ship

Fluke 8600 Bench meter with battery option. Batteries have been removed. Meter operation erratic and not accurate $25.00 plus ship

Anadex Bench counter - to over 1 GHz. MSD fluorescent display SP-357 (Sperry) is out, otherwise seems to work. Repair or for parts unit to repair another one $25.00 plus ship

More to come in second wave.....

I hope these prices are fair. I don't want to ransom them like Fair radio does their gear, nor do I want to sell them for what a recently widowed XYL would ask for them to clear a garage. If my prices are out of line, and buyer can provide a credible source of comparable gear at a lower price, I will consider negotiating.

Will trade for newer and smaller Ham , Electronic oriented, Test gear, receivers, scanners, VHF/UHF gear, Vintage and/or esoteric tube CB gear, or basically anything that will hold value and take up less space.

Thanks for enduring this post,

David

Gary and others:

It is hard to say, as Rick will work "a la carte" and price things
based on how much work the customer wants done. Also, in this case,
the price includes the radio itself, and not just restoration to a
radio that the customer provides.

Unfortunately, Rick is internet-phobic, so it would be best to call or
fax him at 419-255-6220

I don't remember which study guide(s) I had when I got my novice in '62, but I seem to recall that the questions for the technician or general were not all that different in nature. It was still the same sort of thing -- 'learn the material covered here and you will know enough to be able to answer the actual questions of the test'. For various reasons I did not go on to get the general (well, then it would have been a conditional) till nearly 30 years later. The CW was still the hard part anyhow.

560. FS TWO DRAKE 2B's w/2BQ's

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-11 00:00:00 UTC
From: W2NZ
Message-ID: <38f2b06e.3997722@news.ifreedom.com>
Source record: 68333

The 2B/2BQ combination was the hottest CW rx of its day and still holds its own. A skilled user can get 100-150 cps selectivity from this rig. Bought one new around 1959-60 and the other a year or two later.

The first one works on 40 meter band, but dirty band switches and noisy controls need cleaning badly and would no doubt result in other bands working as well. Comes with 2BQ q-multiplier/speaker; ORIGINAL TECH MANUAl; very rare plug-in 160 meter converter; 100 kc xtal caibrator;

Second unit doesn't work. Lights when switched on but just lies there. Good chance it's a tube or two. Also comes with 2BQ q-multiplier/ speaker; 100 kb xtal calibrator.

Physically both in similar condition: some few scratches, and chassis show corrosion. I rate them about 7 on a scale of 10.

Sell all as is for $350 plus shipping from 11758.

Please reply to

pasha196@gis.net

Source record: 68341

Hi, sorry I forgot to post it. On the other hand, as you'll see in the description, the "serial number" is kinda meaningless, since this radio's been heavily modified by the Drake staff.

The actual number on the back is 16466, but as you can see from the photos, it has the 5-position mode switch, and as a result of their work, EF184 (6EJ7) tubes.

Thanks for asking.

Neil

> enciphered communications?

Pretty unlikely that, that, sort of information would have been broadcast, even when encypted by enigma. It is most likely that orders of that kind would have been transmitted by telegraph (land line) or even personally i.e. the unit commanders attend a briefing.

You have to remember that for the allies to intercept an enigma encoded message it had to have been transmitted by wireless. Hence the success against the U-boats, who were receiving their orders, position reports etc. by wireless.

You may not know that landline, and sub-sea, telegraphy and telephony was already well advanced in WWII and a much more secure and reliable method of communication than radio.

The reason it is dumbed down is that they give you all the answers
instead of you looking them up. Not much effort if someone has
already looked up the answers for you.

For sale:

Collins Plate Transformer, Type 672-258C-00 Primary taps 105, 110,
115, 120, 125V
1100V CT at 212 mA, very under-rated. 2500V test. 50-60 Hz
Will sell for $90.00

Plate Transformer, 120/240V AC primary, with secondary of
4160 V at 120 mA (500 Watts) Will sell for $85.00

Plate Transformer, Primary 120V or 240V,
Secondaries: 1475 V CT at 505 mA, plus 6.4V at 14 Amps,
5.1V at 5 Amps, about 4" X 5" X 6" tall, new $65.00

Plate Transformer, Raytheon with 115V primary. Secondary is
1100 V CT at 166 mA. Will sell for $50.00

Plate Transformer, AVCO, 120V primary, with secondaries of
1050 V CT at 75 mA, and 5 V at 20 Amps,
New. Will sell for $32.00

Plate Transformer, General Electric, with primary of 110, 115, 125V,
and secondaries of 1342 V at 100 mA (no CT),
380V CT at 100 mA, and 5V at 3.5 Amps. $38.00

Plate Transformer, Berkshire Transformer Co. Type BTC-1180.
1080 V CT at 142 mA, plus 6.3V at 1 Amp, 5V at 3 Amps.
Will sell for 36.00

Plate Transformer, Raytheon 1100 V CT at 166 mA
Will sell for $40.00

Plate Transformer, Triad, with 115V primary, and secondaries:
1000V CT at 300 mA (taps at 800V CT 300 mA) plus 6.3V at 6 Amps,
another 6.3V at 6 Amps, and 5V at 6 Amps. Will sell for $64.00

Plate Transformer, Bendix with 115V Primary, and secondaries:
860V CT at 250 mA, 6.3V at 3 Amps and 5V at 2 Amps. New $35.00

Filament transformer: 7.5V CT at 8 Amps Thordarson 21F16 upright
mounting
will sell for $25.00

120V primary
35V at 2A transformer mounted on a neat little chassis:
10" X 5" X 3" with only a few small holes. No other parts mounted.
Would make a great project chassis.

Will sell for $12.00

110/220V Primaries - 1225V CT at 215 mA and extra taps for
1185V CT at 200mA sec $44.00

115V Primary - 1000V CT at 300 mA $45.00

115V primary - 920V CT at 300 mA (will supply up to 500 mA DC) $48.00

920V at 700 mA upright mounting $59.00

390V at 1.5 Amps by RCA, with tap for 355V $59.00

370V at 200mA, will sell for $29.00

280V CT at 500 mA, by Chicago Transformer Co. $42.00

200V at 2.5 Amps... $55.00

STANCOR plate transformer
120V AC primary
(1060 V secondary)
580-0-580 V AC at estimated 325 mA
5V at est. 4 Amps
2.5 V CT at est. 8 Amps
5" X 5" X 5"
Will sell for $32.00

= = = = =

The following are all for 115 or 120 V AC primaries:

7.5V CT at 8 Amps. (M) Will sell for $25.00

7.5 V at 46 Amps. 120V AC primary only. Will sell for $82.00

7.5V CT at 51 Amps. Will sell for $89.00
(Has 115V AND 230V primaries)

6.4V at 50 Amps (S) Will sell for $75.00
= = = = =

Autoformer, 230V in / 115V out, 500 Watts $60.00

Autoformer, 230V in / 115V out, 750 Watts $80.00

Primary 440V AC to Secondary 220V at 1.5 KVA.
May also be used for 240V to 120V AC at 1.5 KVA
Will sell for $150.00

Primary 115V AC
SEC 1: 10V CT at 3A
Above chassis mounting
Will sell for $9.00

Primary 115V AC
SEC 1: 5.5V at 2.75A
SEC 2: 7.0V at 2.75A
Above chassis mounting
Will sell for $11.00

Primary 115V AC
SEC 1: 18V at 2A
Above chassis mounting
Will sell for $10.00

TUBES AVAILABLE

I currently have over 300,000 tubes in stock. Have a good selection of both new and used/tested tubes for audio, CB & HAM radio, TV, CRT use.
Sorry I do not have a Web Site nor a price list. Suggest that you Email or Fax me with the tubes that you are looking for along with the quantify of each needed. I will check my inventory and advise you of current availability and cost.
In addition, I also have a very good selection of tube testers, tube caddies and good used CB/HAM equipment. Please contact me regarding your needs.
Thank you for your consideration.

I'm looking for the three lowest freq. coils for an EICO Model 710 Grid Dip Osc. They cover .4-.7mc, .7-1.38mc and 1.38-2.9mc. I would also consider purchasing a Model 710 if these coils are included. Thanks, Henry WA7YBS

Source record: 68102

I have for sale a Collins 75A-2 receiver. Front panel is just about perfect. Cabinet needs a bit of cleaning. No corrossion of rust abywhere. Even the paint on the front panel around the mounting holes is fine. Radio is working, but could probably use an alignment. It comes with a product detector and NBFM adapter both of which plug into the NBFM socket, as well as a calibrator. The only modification I can see is three phono plugs brought out to the rear of the chassis - one for IF, one for Det., and one for audio, probably for an SSB adapter. All knobs are correct. Complete with a copy of the original manual. Price $550.

I've been fortunate to find an original key for the BC-474,
but the assembly is incomplete. The small wooden slab on
which the key mounts and the thumbscrew that secures the key
to the cabinet lid are missing.

Does anyone have a complete key, and can you take some photos
so I can restore this one?

Thanks and 73,
Dave Stinson AB5S

583. "Johnson MatchBox" Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-12 00:00:00 UTC
From: "Gary C. Lewis" <gclewis@penn.com>
Message-ID: <38F4FE0C.70C8@penn.com>
Source record: 68106

Hello RF people,
I had a Johnsobn matchbox show up at my door yesterday. I know where it came from but not who sent it. Anyway. The decal on the back is not to easy to read. I was wondering if anyone can tell me what the connections are. I know the long wire and balanced lines are on the top. But the decal that locates the connections on the teminal strip is almost unreadable. I figured out that there is a ground, a relay, what buy design seems to be for a recving antenna, and the main ground on the box itself.
There is something written about a coaxil cable being connect to something somewhere but I can not read whaty it says. I guess the coax is connected to the terminal strip???
I went to a web page that list a number of manuals for our old gear but there is listed. But I do not know if this is the "old" design or the "new" design. I think it is the "MB 275" but I find nothing to give me a model number. Any help would be great. If someone has one of these great old things could you take a moment and send me what is written on the decal so I can mark them and have an idea as to what I am connecting to what. Thank you for your time...

New today (4/12)
****
Heath HW-202 partially assembled, missing PA and Xtal Switch assy. With Manual. $25.00 plus shipping

TS-352/U Military Multimeter. Has MX-815/U Multiplier Kit and ME-9A/U Multimeter in metal case with removable cover. 1 set of probes in storage compartment in cover. Similar to Simpson 260. Untested. $20.00 plus ship

AN.URM-120 Wattmeter with TM11-6625-446-15 Technical Manual in Metal case with 3 elements: 2 to 30 MHz with wattage selections of 50, 100, 500 and 1000; 25 to 250 MHz with wattage selections of 10,50,100 and 500 and 200 to 1000 MHz with wattage selections of 10,50,100 and 500. All seem to work, but will need calibration. Could be a nice addition. $ 75.00 plus ship

GenRad Unit Power Supply Type 1203-B , Works, but output connector robbed for another project. 6.3VAC @ 3A and 300 VDC @ 300 mA. Fused on each output with toggle switch for power and power on indicator lamp. Rubber feet on bottom or can be used in the Genrad rack mount plate with oscillator. $20.00 + ship

Genrad 1208-B Oscillator 65-500 MHz. Venier Mech. damaged due to unscheduled low altitude flight attempt. Was working before fall. Dial still turns, but no longer smooth and some slippage at tight spots. $15.00 plus ship

GenRad 1215B Oscillator 50 -250 MHz. Feed through cab bad internally. Works but not stable. $15.00 plus ship

GenRad Oscillator / Power supply Rack Mount panel - for 1203 - B supply and 1215-B oscillator $ 10.00 plus ship Package on 1203-B supply, 1215B Oscillator and Panel for $ 35.00 plus ship

****
Previous items still available - Some item numbers corrected - Some prices reduced......
****

Halicrafters S-120 Receiver with manual reprint. Nice overall with exception of crack in faceplate on upper right corner. Works, but Hummmmmms.... $40.00 plus ship - REDUCED $35.00 plus ship

Lafayette HE-35 6m AM rig with stock Mic. Meter is not original. Fires up and seems to work, but not air tested $35.00 plus ship. REDUCED $30.00 plus ship

Realistic Tube VHF Lo and Hi band monitor receiver. AM/FM with squelch. Knobs don't look original. Works and looks nice; above average for it's age. $50.00 plus ship

Gonset Communicator III 2m AM rigs. Have 2. Both fire up and seem to work, but not air tested. Have power cords but no Mics. One has complete rear cover, the other doesn't. Knobs 75 to 85% original. Nice units $50.00 on the unit with rear cover, $40.00 on the unit without rear cover. Both prices + ship.

Compact 5Mhz scopes. 2 units complete but not working. $10.00 each plus ship

R-109/GRC Military Receiver.. 26 - 39 MHz FM. Will need internal vibrator supply for single voltage operation (12 or 24) or can supply filament and B+ via external supply - neither come with unit. Works and looks nice; at least a 7 $45.00 plus ship. REDUCED $40.00 plus ship

RT-70/GRC Transceiver with AM-65/GRC AF amplifier, H-33F/PT handset, 375 Control Box, 281 12v supply (inside AM-65). AM-65 shell for hombrewing project (will snap on unit or use with existing AM-65), Field Manual and some cables (Not enough to fully implement the features of the AM-65 and 375 control box. Works. RT-70 9 out of 10, AM-65 6 out of 10, 375 control Box NIB, AM-65 shell 6 out of 10, handset - 8 out of 10 on handset and connector, cord coil has lost it "spring", but not frayed or dry-rotted. $75.00 plus ship on all. Reduced $70.00 plus ship on all

****
R-392 HAS BEEN SOLD!!
****
R-392 RX (Jeep version of R-390) Dial indicates 00.000 through 32.999 MHz.
****

Siltronix 1011C 10/11m Transceiver. Scratches on front face plate, chassis has oxidation and needs cleaning. Bad 8950 (no filament/ apparent burns inside). Seemed to work when a used 8950 was used to test unit. Power output low and drifts (May be typical of proper operation) With Hand Mic. Power cord and manual reprint.... $75.00 plus ship. REDUCED $70.00 plus ship

Fluke Differential Voltmeter 893 A - Works and looks good - $50.00 plus ship

HP-419 Null volt meters. Have 2. Complete, won't zero properly, operation condition unknown. Good source for precision parts. $ 25.00 each plus ship. Reduced $20.00 each plus ship

Fluke 75 Handheld meter - tried to measure HV one to many times - Display good, case good, may be repairable $20.00 plus ship. REDUCED $15.00 plus ship

Fluke 8600 Bench meter with battery option. Batteries have been removed. Meter operation erratic and not accurate $25.00 plus ship. REDUCED $20.00 plus ship

Anadex Bench counter - to over 1 GHz. MSD fluorescent display SP-357 (Sperry) is out, otherwise seems to work. Repair or for parts unit to repair another one $25.00 plus ship

More to come in third wave.....

I hope these prices are fair. I don't want to ransom them like Fair radio does their gear, nor do I want to sell them for what a recently widowed XYL would ask for them to clear a garage. If my prices are out of line, and buyer can provide a credible source of comparable gear at a lower price, I will consider negotiating.

Will trade for newer and smaller Ham , Electronic oriented, Test gear, receivers, scanners, VHF/UHF gear, Vintage and/or esoteric tube CB gear, or basically anything that will hold value and take up less space.

Thanks for enduring this post,

David

593. TCS-12 parts?

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <38F514AB.76A95D2B@cache.net>
Source record: 68116

Howdy,

I'm looking for TCS-12 parts, specifically the remote control unit, and cables.
Does anyone know where I can find these? Also does anyone know if there is a 110v A/C unit to power the TCS-12 (or the dynamotor), or a kit, or plans.

Thanks,
-Mike

Fair Radio had NOS transmitter cables a short time ago
and may still stock them. Contact them at

http://www.fairradio.com

There were several TCS 110 VAC power supplies- difficult
to find these days, but they do show up from time to time.

The best lead for TCS receiver connectors and etc. I know
would be Robert Downs, to whom I have copied this message.
Connectors are not cheap, but consider that removing the
original receiver connector will destroy far more resale value
then the cost of a $20-30 connector.

Good luck with it. Perhaps we can talk TCS to TCS some day.

I'm not sure, but I think the 6146W is more equivant to the 6146A than the 6146B. The difference here would be in the heater ratings and the plate dissipation rating. I don't think the TS-520 would push the tube ratings though. Worst case you will have to re-neutralize the finals and reset the bias to get the desired resting current.

They will work fine. I have a pair in my 520 that have been in there
for years and they keep on going. I think the "W" was a "Mil Spec" tube,
made for hard use. It was the "A's" that I had trouble with as a novice,
went through a few sets of them in our HW-101. Maybe it was not learning
how to tune up properly????
The price is good, they are a good tube. I would buy them.

Message-ID: <38F53EA9.A02EC22F@metricom.com>
Source record: 68123

Do not use the 275 watt Matchbox with an unbalanced load. An unbalanced load is when one end of a coax cable shield is connected to the case and that end of the coax cable center conductor is connected to the one end of the output coil. Frequently the 275 watt units have been modified to have a second SO-239 connector in parallel with one end of the output coil. The 275 watt unit uses plastic coil supports. It is very easy to have large circulating currents with the use of an unbalanced load which will heat the coil and deform the plastic coil support. The use of an unbalanced load is not a problem with the KW Matchbox because the coil support is made of micalex which can take high temperatures.

Hi,
6146W is made for military where Vibration is the problem. It has less plate dissipation compared to 6146B but will work fine for TS520 transceiver and puts out same 100W without any problem. Any new tube installation will require some sort of re-neutralization adjustment for 10 meter band. FYI, 6146A is made with dark heater filament which will work better under less than 6.3V rated voltage to the filament.
Good luck.

Report: Eavesdropping damaged spies hearing

LONDON (AP) -- More than a hundred British intelligence officers have been compensated for hearing loss caused by too much eavesdropping on the enemy, The Sunday Telegraph reported.

A government spokeswoman offered no immediate comment on the report that staff at the Government Communications Headquarters -- the agency that monitors global communications -- had suffered hearing loss while listening to "enemy emissions."

The center at Cheltenham, 90 miles northwest of London, employs some 4,000 people including code breakers, computer experts and linguists.

The Sunday Telegraph said staff blamed inadequate headphones -- which have since been replaced -- for the hearing damage.

Staff "turned the volume up to full if foreign transmissions were difficult to understand. Some transmissions were accompanied by constant buzzing and crackling," the newspaper said.

New headphones, introduced in 1995, came too late for operators who worked at the center during the height of the Cold War, the newspaper said.

Individual staff have received compensation payments of up to $31,800, the report said.

616. R206 Info

Source record: 68242
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I've got a TS-520 that could use some new finals. I've found RF Parts to be about the cheapest at ~$15.00 each for 6146W's .. Is there any problems with using 6146W's in a TS-520 instead of 6146B's ? Seems there was some issue I heard regarding the 'W' series ages (late70's) ago? Also I wonder if that's about the cheapest source ?

Regards

Chip

Although $31k could buy allot of hearing aid batteries, this compensation seems pale
compared to USA
standards. That is pocket change for our society, with commission barely enough to feed a
lawyer for a week.

Hi,

I am in desperate need for the schematic for the Radio Mfg. Engineers HF 10-20 pre-amp. Apparently there is a B+ voltage problem. It is one of my favorite pieces of equipment and I am anxious to get it working again. If you have a schematic that you could scan for me I would greatly appreciate it. If you don't have a scanner I would gladly pay for the postage if you could photocopy it for me. Thanks in advance!

Great item. Tunable from 550 kHz to 30 MHz over four bands. Has gain control. Three tuned RF circuits plus two RF Amps. This will really control out of band intermod and provide extra gain.Matches RME45 style of radios. Big dial. There are two cabinet sizes; this is the larger one (see Fred Osterman's book for photos of both) $105 shipped in US . Pictures available. Please reply by EMail only

636. Re: Radio Mfg. Engineers HF 10-20 Schematic Needed

Actually I did a bit of investigating on the Internet and the HF 10-20
may actually be a converter or preselector. It contains 4 tubes and 2
of them won't light up. If you could be of any help please e-mail me.
Thanks.

Does anyone have any knowledge of the history of this ancient transceiver? I've seen pictures of them in ARRL handbooks of the 40's, usually associated with the War Emergency Radio Service. Apparently several models were made. Any information or recollections anyone would have would be appreciated.

Yep, Even with the lower plate dissapation, a 6146A will still work
fine. It's still head and shoulders over a "sweep tube" more-n-likely.
Or at least the 6JB6's they use in drakes. Any 6146 should be ok. I've
used 6146A's in my 830 before, and saw no real difference between a "B".
The original TS-520 was designed to use the "A" tube. The later models
used "b"'s. MK

641. Wanted: Vintage (non-transistor) "Deaf Aid"

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-13 00:00:00 UTC
From: maestro@cix.co.uk
Message-ID: <memo.20000413193341.22691A@maestro.compulink.co.uk>
Source record: 68148

In the mid '50s at school we used to obtain abandoned valve (tube) Hearing Aids and turn the first stage into a regen receiver. I'd like to try to repeat the procedure (don't think we had ferrite rods then).

Does anyone have a "deaf aid" (hearing aid) with valves- not transistors - on which I could experiment? I'm NOT collecting so only reasonable price considered. Batteries not needed but preferably including original headphone(s).

Please state asking price, to include postage to UK. Could send US$ notes, up to reasonable amount.

Many thanks,

Bill
(in Edinburgh)

643. Search For Philco Instruction Pamphlet

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-13 00:00:00 UTC
From: caschwark@aol.com-nixit
Message-ID: <20000413163002.15443.00001113@ng-cl1.aol.com>
Source record: 68150

Search For Philco Instruction Pamphlet

Well, it seems it's my turn to ask a question this time.
Does anyone have a copy of the Philco Mystery Control *user* pamphlet?

This is not the alignment info that is included in the service bulletins for radios that utilized the Mystery Control, but the actual operating instructions for the end-user of the Mystery Control unit itself.

There are some allusions to its use in the service info, but not all functions are explained. Maybe you have an operating unit and know how (or remember) it's operated. I'm familiar with the use of the finger stop and volume up/down sequences, but not how to operate the PHONO changer on radio/phono models.

This information will end up in the Philco Repair Bench archives and any help will be credited in the article. I'm willing to pay for a good photocopy of the instructions, but I realize that instruction pamphlets and booklets are the first items like this to be lost - like socks in the dryer!

I'm hoping that *someone* out there has run across this elusive prey.
Can you help?

Thanks in advance,

Chuck Schwark, Chicago, IL

From: David Little <dalite01@sprynet.com>
Message-ID: <8d5j83$i2f$1@slb6.atl.mindspring.net>
Source record: 68151

I just picked up a rarity that I would like to see if anyone here can share some info on. It is an HF rig made by Robyn; more widely know for their CB products. It is of hybrid design, with a power supply / speaker and rig. It uses Nixies for the display and is SSB and CW only. Manual claims 500 Watts input on SSB 400 on CW. I have never seen one mentioned before, and had never seen one before this one. I would like to hear from anyone having any knowledge on the BA.

Thanks,

David

(Please do not reply to the list-
it will start an off-topic thread. Thanks)

Please accept my apology for an off topic post,
but I think it's worth a moment of your time.
Because of my many friends here and respect for the Boatanchor
community, I'd like to pass along this cautionary tale.

My family has had to deal with an unusual amount of illness
the last couple of years. Well, we finally hit the jackpot.
All five of us are down with pneumonia. I've been able to write
a few emails, but that's about it for the last couple of weeks.
We're all on the mend now, thank goodness.

We've finally discovered the cause for all this trouble-
our central air conditioning system. A clogged drainage tube
has caused the system cooling coils to grow a big crop
of mold and bacteria.
The system was blowing the poisonous stuff all over the house.
We've cleaned the system and installed electrostatic filters
at all the outlets, so I hope that this will be the last
batch of ill health for us- at least for a while.

Please- now that warm weather is on the way, have a
professional check your system for proper drainage and
clean coils. I wouldn't wish this stuff on anyone.

Kind regards,
Dave Stinson AB5S

Chuck - you *sure* it;s the power transformer? I bought a '50 that some ham had taken the power xformer out, wired in a new one w/alligator clips to make sure it supplied enough current, etc., and it worked fine. When I permanently wired it into the radio, it was deader than Julius Caeser. After a lot of head scratching I found that one of the wires going to the power switch was open. Absolutely no exterior evidence of this, and I had to poke a needle thru the wire every 1/2" or so to find the break. Nothing's ever easy.

Moral: Check the windings with an ohmmeter where they're soldered to the terminal strips. Also most of the time the transformer blows at the connection of the winding wire and the cloth wire that goes outside the transformer. I've repaired many an xformer this way.

669. Surplus stuff

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-14 00:00:00 UTC
From: Glenn <nospam@nospam.com>
Message-ID: <38F7AD3D.1DA4@nospam.com>
Source record: 68004

About a year ago there was some posts about that military stuff; R-390A receivers and Collins stuff, being turned over to the surplus dealers instead of being melted down. I gotta ask where is that stuff? What happened to it? I really haven't seen any large distribution of that gear in the surplus outlets. Is it being shipped overseas to the highest bidder, is that what happened?

If someone has the skinny let us know.

670. SWAP Mackay transmitter

Newsgroup: rec.radio.amateur.boatanchors

New old stock Mackay solid state MF ship emergency transmitter,
model 2017A, working well, with crystals for 410,425,454,468, 500
Khz. MCW. Powered by 12-14 volts DC.

Would like to trade for a surplus Navy TCS transmitter and power supply.
Or something similar for 1.5-12 mhz CW operation in military gear.
OR TRC-10 transmitter receiver less power supply. What have you?

73,

Sandy W5TVW

Uncle Stupid's Paperwork Flying Circus grinds slowly.
The stuff hasn't sat out in the heat, rain and snow long enough
to have been actually released to the public.

I worked for may years at a large government facility in Nevada
and watched how the surplus cycle actually happens.
I wrote this some time ago and published it on Boatanchors.
I post it here for you illumination and amusement.

HOW BOATANCHORS ARE BORN
by Dave Stinson

The fine art of refining raw electronic gear into
vintage Boatanchors is a long and delicate process,
practiced by skilled craftsmen since the first government
repair shop opened for business.

First, the working gear is retired to a dark, hidden shelf
for a few years so the capacitors can thoroughly ripen.
Then, one fateful day, "Da Boss" comes through the shop
and brays: "We gotta clean up! Th' Division Head is comin'
for an inspection! Get all this ole' junk OUTTA here!"
Thus begin the ancient rituals of transformation.

The harried technicians quickly stack the ripened gear
on a wooden pallet, along with many other completely
unrelated items. This chaotic pile is called a "lot."
Careful planning ensures that the accessories and
cables for the gear end up in a different lot-
typically, the one containing used mouse traps
and broken door knobs.

The Division Head never shows up.

The lot sits on the loading dock for about
another year and a half while the paperwork mill
grinds away. This permits the gear to soak-up the
flavors and scents of the greasy old motors,
ribbon-less typewriters and burned-out coffee makers
under which it is interred. Items that drip
contaminated oil on the gear are especially prized.

At this point, our boatanchors-to-be undergo
an important ritual.
At least once a month, the lot is "inventoried."
Why anyone must "inventory" something that has been
declared "junk" is unknown.

When "taking inventory" of fledgling Boatanchors,
it's common practice to mark them in some way so they
won't be recounted more than twice in the same month.
The preferred method of ensuring that equipment won't
be recounted is to mark the gear with a drippy,
runny splat of cheap spray paint. You can tell
how many months have gone by, since the counters
used a different color paint for each count.

Hitting the front panel is an absolute requirement.
Indelibly burying the dial markings in gooey paint
can earn the counter an extra coffee break.
Covering the tuning dials, the maker's markings and
binding the tuning shafts with a single swipe of
the spray can is known as a 'grand slam' and
can earn the perpetrator an annual salary increase.
Extra points are awarded for obliterating
Collins markings.

After this aging and refining, the gear must
complete a final process.
On a day known only to the gods, a mysterious
man with a truck and a forklift takes the lot
to "The Yard," there to undergo the final "curing."

After several years of being stored outside,
cooked in 100 degree summers,
buried in six foot snow banks and
soiled by field mice, your future treasure
finally reaches that bleached out, plastic rotted,
dead capacitor, seized knob state
we know and love as BOATANCHORHOOD.
The paper gods take only one or two
more years to get the lot on the sale list
and out to the surplus marketplace for you to buy.
So appreciate your fine Boatanchor-
It took a lot of work to create it.

Howdy,
Does anyone have any information about a BC-779-B (SP-200) with a "chrome" front panel? I have one and I was told that this was made especially for admiral for in their "at sea cabin" to listen to the war at the other end of the world. The knobs and switches are labeled with stamps and they are highlighted in red letters.
If you can substantiate the aforementioned description or if you know more about it than I do, please let me know at: kc4slk@csrlink.net
Thanks,
Mike(y)

DONCHA' just LOVE the way these guys think attaching the words "LQQK",
or "RARE!!!" will somehow magically increase the bids...

BUT, in YOUR case, you might want to re-post your item WITHOUT thr lead
"FA", since you are selling yours direct, and many in these groups
filter posts with FA in the heading...

Hi Guys;
I still have a few of these QRPp 40 meter transmitter circuit-Boards that are all assembled and require just 12 vdc(or is it 9?), antenna and a crystal. I have no idea wat the power output will be because I do not a sensitive enough meter.
They have 3 transistors but some may vary a little. The output appears to have a toroid coil. all come with a schematic and are very nicely done.
I found these many years ago at a Fest but I only need one. The last posting that I made was a few months back and sold a few then also.
Heres a picture if you guys wanna see it>>

Collins parts and odds/ends for sale

I don't know what these are "worth" except for those that
places like Surplus Sales are offering and their prices
seem pretty high in most cases.

USED CP-1 crystal pack for KWM-2/2A. Not in real great shape.
A couple of torn pockets, some surface discoloration.
Missing the following xtals:
3.4-3.8(2)/4.6-4.8/6.8-7.0/7.0-7.2/7.6-7.8/13.6-13.8/
14.2-14.4/16.2-16.4/21.0-21.6(3)/23.0-23.2/29.4-29.6
Most of these are the ham band xtals that the CP1 did not come with
anyway. Note that the WARC xtals are there plus almost all of the
10M xtals.

KWM-2A "slug rack" assembly. This is the entire assembly,
slugs, rack, end pieces, shaft... the whole thing
behind the knob (have a used knob too). One slug broken but
new part included. Want to sell as an assembly. Make offer.

KWM-2A mechanical filter New-old stock PN 526-9427-000
This is the rectangular, plug in model used on later radios.
Best offer over $150 ($250 @ ss)

KWM-2A mechanical filter assembly cannibalized from radio, with bracket
and some associated parts, (TS3, L2, C14, C15, C54 (trimmer) and C254.)
Filter same as above. Best offer over $150

Individual Xtals for KWM-2A USED, condition unknown Make offer
Radio FREQ XTAL FREQ MHz
RANGE MHz
7.2-7.4 10.3550
9.2-9.4 12.3550 have 2
13.4-13.6 8.2775
14.4-14.6 8.7775
17-17.2 10.0775 (have 4)
28-28.2 15.5775
28.4-28.6 15.7775
28.6-28.8 15.8775
28.8-29 15.9775 have 2
29.0-29.2 16.0775

New old stock matched pair of IF transformers
T2 and L4 for KWM-2A. Collins part number
278 0293 00 CCC $65 @ surplus sales.

KWM-2A/30L1 output relay, K3. $52 @ surplus sales. New old stock
Have 2. $30 each.

KWM-2A sealed relays, 4 pole (K2)and 6 pole (K4).
Appear to be new old stock. No way to tell if they have
been used but look new inside. $54 each @ Surplus Sales.
$25 each

"three legged" .001 uf dual ceramic caps, new old stock, Have about 20.

New old stock KWM-2A meter switch S12. $59 @ Surplus Sales
Make offer.

Main bandswitch tuning shaft for KWM-2A. Make Offer.

Bandswitch wafers for KWM-2a. Have several different ones, new old stock.
Want to sell as
a "group" (Not sure it is a complete set) $100 OBO for group of 6 wafers

KWM-2A dial circles, used. (the round cream colored part with the numbers
and the
round clear part with the divisions that goes over it. In very good, clean
shape but
there is use evident in the center. Make offer.

KWM-2A movable window with the marker line on it. New, old stock.
Make offer.

KWM-2A audio output xformer. Used, condition unknown but Ohmmeter
says good.

David:

How about some more info on the Analog Computer. Is it a TR-10 or TR-20?
If so, I have had quite a lot of experience with them back in the 1960s.
There also was a somewhat larger desk top computer called the TR-48.
Later EAI produced a desktop model called the MiniAC. I have used all
of these many years ago. The instruction manual on each of these Analog
Computers was a book consisting of several hundred pages. If you can
provide the model number of the computer you have I may be able to
provide more specific information.

713. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-15 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8d8qk5$5og$1@news.hawaii.edu>
Source record: 68020
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.antenna

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the

group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

714. Home Made KWM2A

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-15 00:00:00 UTC
From: jack leishman <k8xx@gtii.com>
Message-ID: <38F7F58A.7238719E@gtii.com>
Source record: 68021

Hi.....I built a KWM2A in 1966 using just the schematic, manual and all the correct parts except the wiring harness. It worked OK, but had a slight delay problem on cw. I bought all the parts and a complete chassis from an ex Collins engineer. I remember my wife spilling a Coke onto the bottom side of this radio and the mess I had cleaning it up. I was an engineer for Heathkit at the time and remember how different it was than a Heathkit. If memory serves me right, I had about $200.00 in it and it looked perfect from the outside. I sold this radio in 1967 or 8. I wonder if anyone has run across this radio or maybe has it and not aware of it's history. It sure would be confusing to some one that knew the proper layout for the bottom side components. It didn't have a serial number. If you think you have this rig, compare it to a factory built model and be ready to be amazed. I was truely surprised that it even worked. Jack k8xx

John do you get any noise at all on recve?
I repaired a couple dead ones like that but on recve it did have
indication noise coming from the speaker....chances are all the switches
need cleaning...use deoxit type spray mainly on the wafer switches.

I have done this and the rig came back to life...hi

Jack

In article <kURJ4.4997$PV.338891@bgtnsc06-news.ops.worldnet.att.net>,
John Haberkern <jhabs@worldnet.att.net> writes
>A friend has a drake tr-4 just decided one day it would stop
>working,transmit and receive.the day before operating perfectly.
>any clues,hints or potential answers will be read and forwarded to the ham
>with the dead tr-4. thankyou, John
>
>
Well, John, you are really not giving us very much to go on. I could say
to you " I've lost my car keys. Any idea where I put them?" I think that
your friend needs to start at the beginning and persue a logical series
of diagnostics. The first question is 'Is it plugged in and switched
on?' No joking!! Lots of technical manuals start here. If it really does
not do anything, the fault is probably pretty basic (but not necessarily
cheap to fix!).

Good luck. 73,
Ian.

yes, YOU probably would consider it rude. And if the foreign guest were simply asking where the Water Closet is located, and there were no other Russian speakers at the party, you would probably expect him to go in the corner
rather than try to be understood in your CLIQUE. ja?

> #2, since you are NOT (apparently) a citizen of the US, YOUR opinion

Has Gary ever been to Norway? In many ways, they are much MORE free over there than amerikans think they are... and most of them are very friendly to 'foreigners' - even ones who don't speak the local language when every one IS... I'm tempted to suggest that Gary travel and see how other parts of the world really are, but that's not such a good idea if he tells everyone he is an amerikan -- we have a bad enough reputation in the past few decades. :(

it would never occur to Gary, who obviously is the authority on
"common sense", to think that there might be many people reading
the group in English that also understand German (or any other
language)... and amerikans wonder why they are no longer respected
in most of the world (except for their money)...

If it is totally dead, meaning no tube filaments glowing, no pilot lignts, no dial lights, etc, then suspect the power supply. Start with the fuse and then work through the other components. Most can be checked with an ohmmeter with the radio turned off.

If it lights up the filaments, pilot and dial lights but has no other signs of activity on receive or transmit, then probably the low voltage DC has a problem, also in the power supply.

Beyond those suggestions, I can't say too much. You will need to provide more details on the problem.

Mike: I don't think so. My father had a BC-779 and it looked exactly like my BC-1004 except that it had different frequency coverage. I think it had a MF band, around 200 kHz. Now I don't know about A model vs B model, etc. But I had a copy of TM 11-866 which covered all the military SuperPros and there were several, and I think the only difference was in coverage. If the frequency coverage is as I remember, i.e., the 200 kHz band, it wouldn't have done the admirals much good copying news from around the world.

Hello All,

I ended up with a "Northern Electric" modified SP600 jx
something-or-other with a unique "Chrome panel" and beautiful
red lettering. Thinking this rig was something special I took
it to a few hamfest's with a somewhat higher price than the
run of the mill SP600's were going for. Never sold it. Then
one day a few years ago I had it at Warren, Oh. (I think)
when an old buzzard strolled up and announced, "Hey, I painted
that rig 20 years ago! will ya take a hundred bux for it?"

Well needless to say I was both Impressed with this guy's
skill and abilities in the front panel department, but at the same
time all bummed out about my "Special" SP600.

Dan Harlan N8ETQ
Cleveland Oh.

Hi,
I do have one with the battery compartment, copy of manual, and the
canvas carry case. Please make offer or trade for boatanchor "stuff".
Thanks, Gary

In addition to cleaning switches, if it is an intermittent problem or there are a whole bunch of seemingly unrelated troubles, tighten up *EVERY* screw that has a ground lug associated with it. Cleaned up a T4X I had that had intermittent bias, no AM, and carrier balance problems.

Hello Tom,

I have a BC-348 that is in original condition. It looks good however the tuning knob is slightly tweaked and binds a little. I think that with a little work the shaft can be straighten. I don't know if it receives. What target price do you have in mind?

759. Re: R206 Info

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-16 00:00:00 UTC
From: Richard Hankins <richard.hankins@nt.com>
Message-ID: <38FA2D8F.1EB6B2C4@nt.com>
Source record: 67953

Paul,

what kind of information do you want? I have part of the EMER here, which I can answer questions from.

Briefly, the R206 covers 550KHz to 30MHz in 6 bands. It has 11 valves, and offers AM, MCW and CW modes. There is a separate power unit (PSU No.15) which provides power for the set from AC mains or 12V DC. It is a single conversion design, with 2 RF amps, mixer, LO, 2 IF amps, det+AF amp, AF output, AVC amp, AVC det, BFO. The tuning scale is unusual, in that the scale runs vertically (rather than the more usual horizontal arrangement).

The set is big and heavy - typical for its time. Its also pretty rare over here in the UK - how common are they in za?

If you want to know anything else - ask away, and I will see what I can do.

This National NCL-2000 linear works flawlessly. It was rated for 2000 Watt input on 80 -10 meters. I measure 1500 watts DC output with my Bird wattmeter. Comes with a spare set of 8122 tubes and original manual.

The amp is in nice condition. Front panel is near mint with only some wear on the rocker switch lettering. Cabinet has a rub on the left rear and a few small scratches on the trim ring. Everything appears original inside and out including the paint.

This is my favorite classic amplifier. (and I've owned a lot over the last 30 years) You can drive it with anything from 20 - 200 watts, solid state or tube. Tons of gain. Works like new. $695.00 including extra set of tubes.

Thanks !
Chuck, W6CAB

Great site. You can even look at the manuals before you buy a rig to get an idea of what it's like.

Rig is original and does work, however it could use some tlc and a fresh alignment. Good condition. Looks like all of the caps are original. It was powered up slowly with a variac and it does work. It has the Collins filter in it as well. Comes with service manual and operating manual. I have only tried it on 117v it does however have 12v capability, though I have not tested this function.

$175 plus UPS

I have digital pics.

Thanks,
Chris

Mint E.F. Johnson Courier Amp. Face and case are almost mint cond. Knobs are mint. Slight scratching on plastic dial and bezel. No tubes. Needs new power cord. $300 OBO. NC-300 Receiver, works fine, has no case. Face is near mint, meter/dial is perfect. $100.00 (2) EF Johnson inline cylindrical low-pass filters $25.00ea. Old Miller inline power cord interference filter $10.00. Hi-quality dow-key $25.00. 1 Pair 4-400 chimneys New $50.00 1 Pair 3-500Z Chimneys, almost new $50.00 Will be posting photos on most everything at www.geocities.com/pacqrat . Email: toomuchstuff@pobox.com

Some stuff that really belongs in another NG but just in case someone collects this stuff too: (2) rare Hy-Gain Model 640 "Footlocker" mobile tube 10/11-meter amps. (for those who know- I may be posting the 2-piece, AC and DC supplies version of the Hygains soon. I have both supplies and 2 or 3 rf heads) Much higher quality than the standard little seep tube amps. Use a pair of industrial 8908 sweep tubes (very heavy duty- last ages under heavy use) for approaching 300 watts pep. One of these has a custom-built remote control head w/ illuminated switches and backlit rf meter and custom heavy-duty long harness for mobile installation. Harness contains control cable, 6 awg dc cable, and quality rf cable for transmitter-amp connection, w/ silver-plated Amphenol connectors. Harness is jacketed in heavy heat-shrink. Custom one has cont-duty starter-type solenoid for key relay. $150 and $250 OBO for the custom one. Palomar 310M mobile tube amp, excellent cond., functioning unknown. $200 OBO. Golden Falcon 400 mobile tube amp, custom flip-top case, w/ fan and backlit meter. Heavy key relay and power wiring. New tubes, 6 new 4048 transistors. Excellent cond. Believed working fine. $300 OBO.

798. WTD: Schematic for Radio Speciality Manufacturing FM Deviation Meter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-16 00:00:00 UTC
From: rlmobley@aol.com
Message-ID: <20000416125631.25765.00002037@ng-fk1.aol.com>
Source record: 68082

I have a Radio Speciality Manufacturing, (Portland, Oregon) FM Deviation meter (cannot find a model number). It covers 25 MHz to 470 MHz and has an O'Scope built in.

I need a schematic and manual for this unit. It is not working and I hate to dig in without a roadmap to help lead the way.

Please advise if you can help. I have searched the Web for this item and have been unsuccessful thus far.

TIA.

Rick, WB5FDP

It is a rig that had a brief life, and undoubtedly very few were also sold.
It's history is fairly obscure. I just did a search to find an old post
of mine about it, and it is interesting how people have some of the details
right, but the sequence wrong. When I posted the message below, I made
a point of digging for the ads. Even then, I really know nothing
about the history, ie who really made it or how many were made or
for how long it was sold. If you want to uncover more details, or
uncover more vagueness, go to http://www.dejanews.com and search
on suitable keywords. I'm sure the ad I saw said "SB-36" but the
key postings seem to have "SBE-36" in common. One of the posts
mentions a review in CQ in 1972.

I haven't felt like digging through the magazines, but he's some info.

There's an ad for it in the first issue of Ham Radio that I ever bought, February 1972, on page 37. It's labelled an SB-35, not an SBE-36, "SBE" is in a couple of place on the page, but the company name is listed as Linear Systems, Inc which also sold some slow scan equipment (including the monitor that had the cassette recorder sort of built in).

I thought the company that produced the SBE-33 and SBE-34 was Sideband Engineers, though somehow I have a memory of Raytheon fitting in somewhere. I can't think of where to look for ads for the earlier models at this point.

I recall that the rig had a very brief lifetime. Linear Systems went on to sell a 6M SSB rig that looked like a converted CB set, and I think a 2meter rig, but you didn't see ads for the SB-36 for very long. The impression I got was that it never sold many.

The story gets a little trickier. I recall an ad for the rig where there was an 11meter band position. The Ham Radio ad shows the bandswitch but no such position, though it does show some auxiliary positions on the bandswitch.

But as far as I can tell, the rig morphed into something else.

The 1972 edition (it carries a 1971 copyright) of Popular Electronics' Communications Handbook (a collection of articles about differnt areas of radio, including lists of commercial equipment) shows no SBE or Linear Systems equipment, but a "Robyn Digital 500 SSB Transceiver" which looks a lot like the SB-36 in the picture and description. THough it's hard to be sure, since it's a tiny picture and the Linear Systems ad showed segments of the front panel but not the whole thing. In the CB section, there is equipment from Robyn and SBE.

I'm sure I saw an ad for the Robyn rig somewhere, and that must have been where I saw the 11Meter position on the bandswitch. Wish I could remember where I saw that ad.

So I guess the SB-36 didn't morph, but the rig was made somewhere else and sold by two distributors under different names.

It would be interesting to hear more about the rig. At the time, the only other ham rig with digital readout that I can think of was the Signal/One CX7A.

But other than the digital readout, and I'm sure it was only a frequency counter and not a synthesier, and two filters for sideband (one for upper and the other for lower, and there might have been a rig or two that did it this way) it isn't a particularly special rig for the time. While the ad shows some of the features, it says nothing about specs. It doesn't even mention the price, though the blurb for the Robyn rig mentions $895.

Cleaning out the stuff this week!

Drake 2B Receiver w/ 2B-Q Multiplier in very good shape (small dimple on the top of the 2B-Q). Copy of manual.
$250.00

Hallicrafters SX-140 and HT-40 in fair shape cosmetically, unknown electronically.
$75 for the pair. No manuals.

Heathkit HW-16 in good working order, cosmetically very good to excellent. With manual.
$150.00

Pickup only in Western Mass. My job takes me throughout a lot of Western New England so
I could meet you during the day when it fits in with my schedule.

Thanks for reading.

Jim

wanted a BC-342, but received a BC-312M with mains power supply. The
surplus manual seems somewhat weak for this, it is not clear if this
model has xtal filter as other BC312 models (and BC-342M). Front panel
is also not clear and it seems to be some spare screw holes, perhaps
some accessories has been used with my receiver

pse comments?

I have several Collins 208U-3 3 KW 2-30Mhz RF Amplifiers. These are in
good condition
as removed from military service.

This is a military/commercial quality amplifier that uses a single
4CX3000A to produce
3 KW PEP or average power with only 0.2 watts of input.

These are automatically tuned with a servo system that takes about 10
seconds to tuneup.

The primary power input is 200-250VAC, 3Ph, 47-60Hz.

The net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would
make a great addition to your station.

I am offering these unpacked FOB Somis, CA as follows:

untested less the 4CX3000A Tube $3,000. unpacked.

I have a few NEW Guaranteed 4CX3000A tubes at $1,000. each

Crating by a professional packer is $350.00 additional.

A complete service manual is included at no charge.

There is a photo of this item on our web site
http://www.columbiaelectronics.com

If you need more info please contact me.

Nothing to do with radios, and already endlessly pointed out I am sure, but we pay much less in taxes (gas, sales, income, and other) here than *anywhere* else in the "civilized" world. Count your blessings!

I have several microphones for sale here...

Astatic D-104 desk microphone, amplified. Has original locking PTT bar
and clip included. Bottom cover is not original, but is un-noticeable.
Some minor pitting, but otherwise in decent shape and works well.
Will sell for $40.00

Pictures available at:
http://www.geocities.com/ResearchTriangle/8235/imag/D104_1.jpg
http://www.geocities.com/ResearchTriangle/8235/imag/D104_2.jpg

Shure desk microphone, similar in appearance to 526T. Has PTT and
locking bar. Not sure what impedance. Looks nice. Untested.
Will sell for $15.00 plus shipping.

Pictures available at:
http://www.geocities.com/ResearchTriangle/8235/imag/19b209_1.jpg
http://www.geocities.com/ResearchTriangle/8235/imag/19b209_2.jpg

OLD Atlas DM-5 Microphone base, minor marks on the chrome part. Base
appears to be unused. In original box $15.00
Bought it from Lafayette, circa 1964

Pictures available at:
http://www.geocities.com/ResearchTriangle/8235/imag/ATLAS_1.jpg
http://www.geocities.com/ResearchTriangle/8235/imag/ATLAS_2.jpg

Shipping additional.

I have a total of about SEVEN different mics, ancient and modern that
I need to sell. You can find them at:

http://www.geocities.com/CapeCanaveral/Hall/8701/mics.htm

Need a Hi-Z mic? I have those too!

> would try to locate a person who could *translate* for me...

Live up to your own standards! COMMON SENSE? I'm reading your message in "nl.radio.amateur" where DUTCH is CLEARLY the prevailing language, so why did you switch to YOUR language of choice ENGLISH instead of using the DUTCH language commonly used in this ("nl.radio.amateur") newsgroup.

Before you make any other stupid remarks review your Newsgroups line next time to see if they all match the same language. An apology from you to the readers of the DUTCH newsgroup "nl.radio.amateur" (in DUTCH) is about the least you can do to show that you realy mean what you wrote. Otherwise shut up.

En nu ga ik er geen woorden meer aan vuilmaken, ik vind het wel goed zo.

Met vriendelijke groet,

Henk.

I believe that what you have is a thermal (uses a thermocouple) type meter, which works equally well on both AC & DC. Often, the thermocouples in these meters are blown out, and are not available. Hook it up to a line cord, plug it in & see what happens.

Source record: 67909

Ever wonder if your radio is slowty deteriorating? How would you check? How about an external standard!

Here's a possible solution.:

For Sale, a battery operated (nine D cells) test set which generates signals at various point in the HF range , and then samples the audio output of your radio and gives you a go/no-go indication on a meter. Basically we would call this a SINADDER in the two-way radio business.

Aiken Electronics Model TS-5003 in good condition with copy of original manual. I have two so willing to sell one for $150 + UPS.

This is a solid state unit, and generates at 2.5, 9, and 21 MHz.

Switch positions are: OFF-BAT CHECK-NOISE LEVEL-AUDIO ADJ-NOISE FIG-AUDIO ADJ-2.5 MHz- AUDIO ADJ - 9 MHZ - AUDIO ADJ - 21 MHz.

BNC input and output connectors. Nice meter with green "GOOD" scale and CALIB point. ABOUT 5" wide, 8.5 hi, and 5" deep. Solid state (uh, oh,,,maybe it shouldn't be on this page!). Handle on top, Has operating procedure printed on side.

E Mail ONLY

861. Need information on National NC44....

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-18 00:00:00 UTC
From: nc183d@aol.com
Message-ID: <20000418165925.14379.00002038@ng-ch1.aol.com>
Source record: 67918

Hi All,
I recently got a National NC44, worked it over and it is up and running fine. Now for the question: What speaker should I be using with this set? Did it use the same speaker as the NC46? If not, then what speaker should I be using for it? Any information would be, as always, greatly appreciated...
rgds,
Mark S.

I'm certainly not collecting Motorola DSP type transceivers. This is
the noisiest newsreflector I've ever tried, and when most of the posts
are concerned about recent equipment it seems better to unsubscribe
ASAP and leave the reflector for the appliance operators needing info
for complex solidstate blackboxes

I am reviving a CEI 901-2 VHF receiver, and found 5 of it's 16 nuvistors bad in my initial checkout. They Are JAN 5765 with external grid connection. Where would I go to find these? I would like to get the replacements and some extras for spares. Also would like to get some 6CW4 ones too.

Thanks,

David

FS Drake 2A & Speaker/Qmultiplier This radio was DOA when I bought it aout a year ago...I repaired it gave it a complete alignment job...replaced a few tubes, etc comes with a manual instead of the 6X4 rect. tube it has diodes instead...rcvr looks great and it works like its supposed to...Q Multiplier with this rcvr is hard to beat..has notch filter and with a little talent you can achieve less than 100hz filtering on CW or if you just want to listen to the guys on AM...it has a wide 4.5khz filtering or 2.4khz for SSB...chassis has some discoloration on the copper but does not affect performance....$200 plus shipping

about 3 years ago at a hamfest which i can't remember i bought..
a MF-5, UR-3, TTG-3, RF-8, and REC-2..
but didn't get any docs..
i've been too busy to try to find them but will one of these days..
i hope to retire in about 3 years and then will have more time to search for
boatanchor docs..
i've been to aus about 20 times and lived in sydney for about 9 months..
if you don't have any luck keep my info and keep in touch..
cheers
hank wd5jfr

DRAKE CW STATION
Drake CW STATION
I have put together a nice Drake CW station from my extensive drake collection... sold as a package deal for now....Drake 2C rcvr with calibrator..this rcvr has sharp filtering.. .4oohz..2.4..and 4.5khz for receiving AM...selectable upper and lower side band...selectable agc slow or fast. rig covers 10 thru 80. The 2NT is one great CW sounding cw rig either xtal or vfo controlled uses timed sequenced keying (grid block) and is adjustable for full breakin, etc. The VFO is a real beauty from my collection the WRL V10 uses 3 tubes has built in regulated pwr supply. this vfo is close to being mint for one thats almost 40 yrs old..you wont find one better. I have manuals for all this stuff...will also include some connecting cables for rcvr mute and side tone connection. the rest you have to get your self. All this stuff looks great and works great....$445 plus shipping for 35 pounds

869. FS: SX-16

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-18 00:00:00 UTC
From: "Stevan A. White" <engineer@kgnc.com>
Message-ID: <38fd076d@news.usenetnews.org>
Source record: 67926

I have a Hallicrafters Super Skyrider SX-16 with original manual for sale for $300 (or best offer) plus $35 FedEx shipping and insurance. It is in working condition and in fair shape cosmetically. It could stand a good cleaning but otherwise is OK. It is a rack mounted radio and does not have a case.

It's a neat old radio but I don't use it so I'd like to sell it to someone who will. Please reply to me at engineer@kgnc.com by this Friday at 5:00 PM CDT with your best offer. I'll notify all who respond whether or not they were the "lucky" one to buy the radio that evening.

Tnx & 73's,
Stevan A. White, W5SAW

870. FS: R390's and SSB Convertors.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-18 00:00:00 UTC
From: Mike Taylor <mvtaylor@voyager.net>
Message-ID: <38fd1189$0$26047@news.voyager.net>
Source record: 67927

I have two R390A's for sale both are Motorola's and were rebuilt by Rick Mish within the last two years. I will include a CY979A cabinet and a set of newly manufactured covers both top and bottom plus the inner "Utah" cover. I will also include with each receiver a set of new tubes for the receiver. The price is $1000. for each receiver. The buyer must either pick up the receiver in northern Michigan or pay packing and shipping.

I also have the relatively "rare" CV 157 SSB converter. This was also reworked by Rick Mish. The price is $1000.
Shipping and packing as above.

I am also offering a CV 591 A SSB converter. This unit is working but it was not reworked by Rick. The price for this unit is $300. Shipping and packing as above.

Thanks for the bandwidth.
Mike

Jan-Martin,

Panoramic/Singer have been out of business for quite a few years now. I'm
told this was due to their being swallowed up in a series of corporate
merger/acquisitions. I'd really like to get the full story one of these
days.I got a manual for my MF-5/CA5-1 (SSB 50 system) from Manual Merchant
(Thanks, Linda Perkins!).

I've seen manuals for the HF systems avail from the usual vendors.

Singer products were acquired by Eaton Corp about 20 some years ago. Actually I believe another company bought Singer first then Eaton acquired that company. Eaton is a huge company which owns many many companies. Some of the Singer products I believe ar still manufactured. You may have to dig on there site to find the right division.

From: Randy & Cara Randall <crrandal@seidata.com>
Message-ID: <38FDC29B.3B404159@seidata.com>
Source record: 67851

Hello. A friend of mine who is an ex-ham has a MLA-1200 that I
might be interested in. Is this one of the Dentrons that has the next to
impossible to find tubes? I am guessing that the rig is rated at 1200
watts
DC input from the model #. Neither one of us has any idea as to its
current
worth. (Working with full output) I have done a search on the internet
and Ebay to no avail. I guess they never made many. Is this
an amp that has some usefulness in its future or something I should stay
away from? Is it worth it in the long run?

Thanks,
Randy.

p.s. I have not seen it recently, does it have the WARC bands and 160
meter coverage?
I can't remember.

Tony --

The HT-32A does not use a two prong plug -- it uses the Ampehnol type
75-MC1F connector (one center pin...).

I believe you're refering to the 2-prong type of plug used on a B&W 5100B;
that is an Amphenol Type 80-PC2F "two contact" connector.

I'll check my parts bin. However, both are quite common at hamfests!!

No... the Ranger I originally came without the differential keyer---it later became an add-on kit for those who wanted the upgrade.

Personally, I think I liked the Ranger without the keyer---I don't know if it was really worth it. That string of dropping resistors sure gave off a lot of heat---I recommend replacing them with 20 watters and prevent the blowup like what happened to mine.

890. FS: Simpson 260 VOM

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-19 00:00:00 UTC
From: Larry Menzel <retire@rconnect.com>
Message-ID: <sfrml1e6eoc89@corp.supernews.com>
Source record: 67859

Mint condition Simpson ANALOG 1KW VOM. This meter is like brand new, with like new leads and aligator clips. Instruction manual included. It is about 10 years old, and difficult to tell from new.

Addtionally, it's in a like-new hard leather carry case that both transports and protects the meter.

$120 including S/H CONUS

893. Lionel J-36 - How much?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-19 00:00:00 UTC
From: Steven Gibbs <sgibbs@guernsey.net>
Message-ID: <38FE06E6.AED758C0@guernsey.net>
Source record: 67862

I've bought a WWII US Army J-36 bug key (serial 25768)
made by Lionel Corp. from a fellow ham who found it
recently in a local flea market here in Guernsey.

It's in decent condition, complete and undamaged except
for the plastic label which is badly curled.

It's not for sale but I'm wondering what's the market
value in USA?

Tks & 73, Steve GU3MBS

Saw this on a website for sale. Is this for real?

E.F.JOHNSON VIKING VALIANT II
Selling ABSOLUTELY MINT VIKING VALIANT II. An easy 10+++
in all respects. Looks like still on assembly line. This one is factory
wired. With original box and manual. $2500 f.o.b. Mpls. Had it on the
air again this morning. Serious inquiries only. No wishful wanna-be's.
Listing #65927 - Submitted on 04/18/00 by cqdx@Mindspring.com, Callsign:
K0????, Web Site:

then I saw this and thought you all might like a laugh ! Remember Mr. Hainey of
Green Acres ?

Mr. Hainey: Mr. Douglas do I have a deal for you and Mrs. Douglas that you just
can't refuse!

Mr. Douglas : Mr. Hainey I don't need a deal this morning but thank you!

Mr. Hainey : Oh but yes you do, Its a premium and I do mean premium Viking
Valiant II that was never out of the box and you will never find another like
it on planet earth or at least this planet earth. This is the finest Valiant in
the land Mr. Douglas

Mr. Douglas : No thank you Mr. Hainey I already have a Valiant II and it never
gets used anyway because there is no one to talk to on it anymore, And here in
Hooterville all everyone wants to talk about is how huge their signal is with
their 5KW amplifiers and they all squash me and my little Valiant so I don't
need another, NEW OR NOT!

Mr. Hainey: Mrs. Douglas can you please explain to your husband Mr. Douglas
that having this Valiant is the only way he will get any respect on the air!
and when he tells everyone that this is what he is talking on He WILL get the
RESPECT of all the HAM operators here in Hooterville , The best Valiant in the
land!, they will all be quiet just to listen to this fine one of a kind
transmitter, then Mr. Douglas will be talking to everyone and will have plenty
to talk about!

Mr. Douglas: Mr. Hainey I said NO!
Mrs. Douglas: But Oliver! you need this! like Mr. Hainey said you will get some
respect for the first time and everyone will listen to you after all you always
said that no one here listens to you and you need your respect!

Mr. Douglas: Mr. Hainey how much do you want for this one of a kind Valiant?
Mr. Hainey : Just a measly 2500 dollars Mr. Douglas
Mr. Douglas: WHAT 2500 dollars are you crazy ?

Mrs. Douglas: Now Oliver you be nice to Mr. Hainey he came all this way to offer this to you! He could have put it on EBAY
Mr. Douglas : I won't buy that for any kind of money! I don't need it! If I paid that I would be the laughing stock here in Hooterville forever !
Mr. Hainey : OK Mr. Douglas I can see my wares are not wanted here.
Mr., Douglas : Good by Mr. Hainey
Mr. Hainey: OK (pause) Well how about a Brand new in the box Super duper DENTRON Super Modified 10,000 watt Linear? Then everyone will be sure to listen to you Mr. Douglas! and because I'm going to sell it to my friend, you Mr. Douglas its just a paltry 12 thousand dollars.
Mr. Douglas: GET OUT ,,,,, GET OUT OF HERE AND DON'T COME BACK!
Mrs. Douglas: Just for that Oliver I'm never talking to you again and now you really have no one to talk to.
Mr. Douglas: Lisa!

The bandpass tuning coil (L4) from a HQ-170 will also work in your
HQ-180. Your best bet is to try to locate a junker 170 or 180 with a
good coil. Good Luck.

>
>Tnx Jack K8BVJ
>
Jack,
The first Viking Ranger I was built using cathode keying. Later, after Johnson designed the Valiant, they retrofitted the Ranger I with grid-blocked, time-sequence keying. There is a little chassis that fits above the function switch to the left of the VFO and it is used to derive the negative grid-block voltage and to provide the sequenced keying. Older Ranger I's may not have been retrofitted.

seems to be completely impossible to obtain docs for Singer equipment.
A friend working for the navy told me they tried for years to get
maintenance docs for UHF and SHF signal generators, but no result, not
even negative reply. Perhaps only the army is still stupid enough to
buy such equipment on several occasions?

>thanx

Jason,

What are the specs of the transformer you need? Of course the 5Y3 rectifier
needs 5V @ 2A for its filament, and the rest of the tubes need 6.3V @ 3A or so.
But what HV is needed - and how big is the old transformer?

Might be something in the junkbox that will do the trick.

Those are good numbers - lots of transformers made that will do the
job. Voltages must be exact, but as long as the current is adequate,
you're OK.

What happened to the old one?

> that is the rating off of the spec sheet that i have here..... but it
has been a
> buggar to find a place around canada for where to get something that

> this rig... so there ya go.. hope it will help
> thanx
> jason(ve9jmc)

I almost certainly have something that will work. In fact I think I
have several. The next question is, how big is it (height by width by
depth, mounting centers of the bolts) and what style? "Upright"
transformers have the laminations vertical, and there's no big
rectangular hole in the chassis. Others have the laminations
horizontal, and mount in a rectangular hole in the chassis.

If I have something that will fit, maybe we can do a deal. I am very
reasonable, but the post office may not be ;-)

It's humming because something is moving. Make sure the bolts are tight. If the windings are loose wrt the core, gently tap in wood wedges until secure. I have heard others have tapped the transformers lightly on the corners with a hammer, then tightened the bolts, but I've never had to resort to that.

Others on board have answered your original question.

I installed the time sequence keying on my old ranger because I kept
getting run off 20 Meters because of key clicks (I lived in DXer
alley). The sequence keying cleaned up the clicks in addition to
giving the ability to zero the VFO by putting one's finger across
the key.

IIRC, it was a fairly simple circuit that could be easily replicated.

935. Mercury rectifier question (83)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-20 00:00:00 UTC
From: Rod Murray <dw130@mediaone.net>
Message-ID: <38FF92AA.78A1BD30@mediaone.net>
Source record: 67813
Cross-posted to: rec.audio.tubes,rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Hi,

I recently purchased three NOS type 83 Mercury vapor rectifiers. When I tested them on my calibrated TV-7, all three of them tested bad (very bad). The tubes looked brand new so I tested them on my other non calibrated TV-7, same thing! I had other type 83's that tested OK on both testers so I ruled out the tube testers. For lack of another idea, I installed one of these NOS/bad tubes into the non calibrated TV-7 and ran it for a few weeks. The tube tester seemed to function fine. I pulled the tube back out and re-tested it on my calibrated TV-7 and now it tests fine. The two NEW/Unused 83's still test bad. The only thing I can thing of is that something happens to these tubes when sitting unused and whatever this is, is reversed by using it. Any insight into this would be greatly appreciated.

Thanks,

Rod

If mercury rectifiers that have been in storage will probably need a
good
long warm up time. Run the filaments for half an hour and then see how
they
test. Heres part of an email Russ Sadd sent me:

HOWEVER, there is one very important caveat with all this: the *first
time*
you operate an 866 in an amplifier, it's going to have mercury
"spattered on
the filament and plate". This happens each time the 866 is handled. Thus
every time you plug an 866 in, its *initial* delay time must be at least
15
minutes to redistribute the mercury - so just the heaters switched on,
no
HT. If you have an 866A, this initial delay must be 30 minutes instead.
After this, 30 seconds is all you need unless the valve is shaken again.

Hope this fixes your problem.

Adam

I have a Hallicrafters Super Skyrider SX-16 with original manual for sale. It will go to the best offer plus $35 FedEx shipping and insurance (or US Postal Service if you prefer). It is in working condition and in fair shape cosmetically. It could stand a good cleaning but otherwise is OK. It is a rack mounted radio and does not have a case.

It's a neat old radio but I don't use it so I'd like to sell it to someone who will. Please reply to me at engineer@kgnc.com by this Friday at 5:00 PM CDT with your best offer. I'll notify all who respond whether or not they were the "lucky" one to buy the radio that evening.

Tnx & 73's,
Stevan A. White, W5SAW

938. FS or Trade Complete Yaesu FT-902DM Station

Newsgroup: rec.radio.amateur.boatanchors

I have a excellent condition Yaesu FT-902DM station for sale or trade. It consists of the 902DM Transceiver (AM/FM/SSB/CW) complete with WARC bands. It has the optional 400HZ Fox Tango 8 pole CW filter and the 2.1 KHZ 8 pole Fox Tango SSB filter (I have the original SSB filter with it also) Also have the FV-901 DM digital remote VFO (has 40 memories), the SP-901P External Speaker phone patch, the YD-148 desk mic and the hand mic. All documentation for everything. Everything works fine. It is an excellent station, but I want a smaller solid state radio. I would sell it for $550 + shipping or trade for a Kenwood TS-50S, Ten Tec Corsair, or what have you, I'll trade up or down. Please email direct with any info or offers of trade.
thanks
Tim

Works best into 5 Megs or higher. It will work okay into lower
impedances but the lower the Z the less the low frequency response.

email and post...

I remember those amplifiers. I think its a single tube 8874 (metal ceramic) grounded-grid. The problem is whether the tube is blown or soft. New tubes for that box are around $300-500 each! The other problem is if the plate/power transformer is good. For what its worth now, you could just about buy some newer units, or a used unit that uses much less expensive tubes. Some users of these very small tubes over drove them so that the grids overheated and then shorted out. Therefore, "poof" goes the tube.

ok here are the specs that you asked for.. well the old transformer that was in it was huge by my standards!:))) but really this is my first project... but here are the specs
T1 pri=117VAC@.61A
sec1=700vct@.069adc
sec2=5vac@2a
sec3=6.3vac@2.6a
that is the rating off of the spec sheet that i have here..... but it has been a buggar to find a place around canada for where to get something that will work for this rig... so there ya go.. hope it will help
thanx

Jethro: Pa! Pa! Lookie what I just bought!
Uncle Jed: Whee doggie, what in the world is that contraption Jethro.
Jethro: Why that there's my radio transiemitter Uncle Jed. I can muster up 'nough RF
to hetrodyne all of them big boys up on 3885! I can be a real amateur radio operator.
Uncle Jed: Well that's fine Jethro but what in the world do you want do that for?
Jethro: Gee Uncle Jed, everyone knows that an AM ham operator attracts the girls.
Uncle Jed: But don't you have to pass a 5 WPM code test to be a ham Jethro?
Jethro: Awww gosh Uncle Jed, you don't know nuttin' do you? I don't need a license...it's a free for all up on that band. Even then, I gotta 6th grade edgiecation, I'll show them whos smart!
Uncle Jed: Jeez Jethro, you may get caught.
Jethro: Why when I hetrodyne those big boys, they won't know who dun it. I'll just give it an ooooooollaaaa and they'll blame it on those South of the border guys!
Uncle Jed: How much didja pay fer that boy?
Jethro: Just $2500 Paw
Uncle Jed: Whee Doggie, Mr. Drysdale is gonna stain his shorts!
Narrator: As the story goes, Drysdale stains his shorts, Miss Jane falls in love (again) with the new radio operator, poor ol' Jethro couldn't figure it out because it was a II model...no 11 meters on it and Granny gets the mess shocked out of her because she tried to cook it after Jethro canned it!

I have a really nice looking HQ-129-X with the matching speaker. Good copy of manual. Could use an alignment and some of the controls are scratchy. The cabinet is good for a rig of this age. The front panel is fantastic, easily an 8 out of 10 and is totally unaltered, no holes, no labels, minimal fingernail scratches, all original knobs, etc. This front panel will really clean up nice. Inside chassis looks good. Speaker cone is original (I think, at least it looks really old but totally intact). Speaker cabinet looks decent. I am the third owner. The second owner bought this used in 1951 and used it up until last year.

This rcvr will easily clean up and align to be a top notch HQ-129-X. Paint the cabinet(s) and you are downtown.

What I want: No money. Trade only for an Icom R-70 rcvr. May consider other receivers but really looking for the R-70. Prefer a local trade so we can check out the gear but shipping this is no problem. We both must be satisfied or we trade back.

HEY!!! that's good one. Well mebe a bit much for just a 10+++ now if'n it were a 10++++ then it be good. But no nevermind, it's got the manal and original factoriy carton box---that makes it worth $2500 fer sure. That what my Elmers taught me, "Save the manal and original factoriy carton box---always!" an that's what I done. I have a room filled with the original factoriy carton boxs---wanna see! The big plastic bag is a plust---use a twisty tie to seal in new radio smells for later---when you wants to sells it at a Hammmmmmfesst.

949. Recieving tubes for your vacuum tube radios

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-20 00:00:00 UTC
From: tubecntral@aol.com

Source record: 67881

Hello, I am sorting through my miniature recieving tubes while I re-tube my Tram D-201.

If anyone needs some of these little buggers, I stock NOS original box, and used that transconduct close as good as new for half price NOS that are guaranteed to perform properly when you get them.

Feel free to drop me a line if in need.

I DO have the larger 6L6's and whatever others for the radios too, but haven't sorted them out lately and am concentrating on reciever tubes for now.

Postage no matter what size order by priority mail anywhere in the USA only 3.00. I use the PO's delivery confirmation tag at no extra cost to you..

All are guaranteed to satisfy your needs.

I work on mutual trust and take pride in trading quality items, fully tested on a TV-7 before shipment at very reasonable prices.. I am a private hobbyist, so I have no catalog. (yet :o)

If needed, Please respond via email with wants, as sometimes I miss reading the group for a day.

I have been working odd hours, so please be patient if it takes a day to get back with you.

73's,

Regards,
Joe Pratt, Tubecntral@aol.com

952. FS: Collins 75A-4 & KWS-1

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-20 00:00:00 UTC
From: gharmon@idworld.net
Message-ID: <38fef0e0.210765724@news.idworld.net>
Source record: 67884

Hi everyone,

I have a set of Gold Dust Twins (75A-4 and KWS-1) for sale.

The receiver and exciter look really nice and have minimal cosmetic
problems. There are some of the little nicks across the top front
panel
edge of the receiver.
The power supply cabinet needs refinishing.
Original manuals.

75A-4 Receiver......
Serial number 2518
Chassis date 7/18/58
Works well
Extra BNC and trimmer adjustment hole on rear
Standard SSB filter
Collins 4:1 reduction knob
No speaker
$1,250 OBO

KWS-1 Exciter......
Serial number 168
Fresh 4X-250B finals
Partial alignment done
Checked out on 80 meters
Collins 4:1 reduction knob
Needs a piece of rectangular glass on the front panel

KWS-1 Power Supply:
Replaced four capacitors
New HV cable
Wired for 115V
PS to exciter cables
Fresh 866A HV tubes
Blower fan bearings replaced
New air hose
100V AC antenna relay included (requires DC relay)
Inside of the power supply looks great
$1,750 OBO

Would consider a nice SX-115 or SX-28A as partial trade.

Can take the twins to Belton on 29 Apr for serious examination and
purchase.
Would also be willing to drive a reasonable distance for delivery.

Here are some pictures to review. Please contact me on the telephone
or
email for additional information or more pictures.

>Need Transformer for Mercury Model 1100A tube tester. Probably could use any
>tube tester transformer.
>Thanks, Gene

Gene,

I've got one I pulled from a Jackson 115 you can have if you want it. I left it wired to the selector switch. The tester it came from was totalled by UPS, but the transformer is OK. E-Mail me an address and I'll send it to you.

Source record: 67745

Coil sets for the BC-229 or BC-429 aircraft radio command set receiver.
Clean and in excellent depot condition.
This receiver is part of SCR-183 / SCR-283, which was the standard
Army Air Corps command set through the 1930s and into the early war
years.
They did see service throughout WW-II.

These coils are the dual range sets,
covering 200-400 KC and 2500-4750 KC.
Most are still in the depot wraps.
Most still have the depot "SERVICABLE" tags with WW-II dates.

$15 each plus $5 shipping. Have several.
Will also talk trades for other coil ranges or
similar-era items.

Real nice looking HQ-129-X with matching speaker. Rcvr could use re-tubing and the controls are a bit scratchy but it is very operational as-is. The front panel is super, an easy 8 out of 10. No serious scratches, no extra holes, no extra anything. Should clean up quite nice. The cabinet top cover shows minor rust but nothing that is not easily sanded down and painted. Superficial rust, not really deep. Spkr is pretty good. Looks like the original cone. Have copy of manual. This is a much higher than average specimen and will clean up nice with some paint on the cabinet.

$175 shipped to your door lower 48.

Source record: 67771
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.swap

I'm looking for the schematic or a cable to buy for for programming older Yaesu radios. I have a FTH-7008, although I believe the same part works for the following models:
FTH-2070
FTH-2008
FTH-7008
FTH-7009
FTH-2009
FTH-2011
FTH-7011
The cable I'm looking for plugs into the serial port and attaches to the microphone plug of the radio.
This is not the same cable as used for the newer VX series. That has a 4 conductor plug.

Any help would be appreciated.

Scott

Most mercury tubes require "aging" for a period of time before use. I don't know about the 83, however, 866s and relations need to have the fil voltage run for about one hour before application of voltage. I suspect you just aged you tubes.

993. "Trio" 9R-4 receiver history?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-21 00:00:00 UTC
From: Cortland Richmond <Cortland.Richmond@usa.alcatel.com>
Message-ID: <39011F73.830F0B20@usa.alcatel.com>
Source record: 67775

I have a radio I had not seen mentioned on the Web until this evening, a Trio 9R-4 receiver. This has 9 octal tubes, is transformer operated, and superficially resembles a Hallicrafters S-38, larger, with more knobs and an S-meter. It has more than a passing resemblance to the later (miniature tubes) Lafayette HE-10, which is showing up on E-bay (and their kit version) and shares with that radio an inconvenient horizontal dial frequency numbering. However, JF2NXS has a number of Kasuga/Trio/Kenwood radios shown on his site at

http://member.nifty.ne.jp/itaruokada/trio/trio1_e.html

(the first Web site I've seen with the 9R-4) and it appears to have been manufactured by the Kasuga Musen Shokai (Kasuga Wireless Co. Ltd.) which did not become "Trio" until 1960.

(see http://www.kenwoodtmi.co.jp/e/enkaku.html)

Has anyone else knowledge of the "Trio" 9R-4?

Thanks

Cortland

Hey Scott,

The VPL-1 is the cable to program the radios you listed. The VPL-1D is
the cable and associated software to program the radios you listed. After
weeks of searching, I finally decided to just bite the bullet and buy the
programming kit. Works great!

995. Auction: TCS-14 Transmitter NOS MINT

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-21 00:00:00 UTC

I have a new-old-stock TCS-14 transmitter for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=314106127

and the blurb is

This is an unused and unmodified new-old-stock mint-condition example of the venerable TCS-14 AM/CW transmitter. Found as-new in-the-box, never put into military service, with no holes gouged out for coax connectors, no manky power cables grafted into the case, no mouse nests in the wiring, or any other defect usually found with these rigs. Covers 1.5-12 mHz, AM or CW, and with the appropriate power supply (not included), I believe it puts out around 35 watts AM, 50 watts CW. The inside gleams like the day it was produced, the panel and chassis have no corrosion or discoloration. Includes cabinet and shock mount feet as shown. Some of the packing material is stuck on the large front handle, but that will be easy to remove. I may clean that and repost a picture so I can see this fine old rig in all it's glory before it goes out the door. Unless you have a time machine, you're never going to find a cleaner example of a TCS transmitter -- don't pass it up !

Closes 4/30/00

Thank you.

well i had this rig given to me by another operator and it had never worked when he had it... and he had never had the time to look at it... so when i got it home the first thing i looked at was the voltages out of the transformer(get rid of the obvious first). and i had noticed that i had 117vac into the transformer.... and i had nothing out of any of the secondaries.... so that was easy i thought.... i just have to get a new one.. or get this one rewound.... so i started calling the electrical shops here in town only to find out that no one would rewind the transformer,and that no one could get a replacement for it either. so the next step i could take was to see what would happen on here! and well ppl have said to me well just take the transformer apart and check all of the taps on it to make sure one was not broken.. and i know there is one that is broken.. but the thing is, if i take it all apart i know that i am not going to get it back together again.. i may know a little about electronics.. but have not gotten into the transformers side of it yet. and i would rather not use thiat particular transformer as a practice dummy in case there is someone around that can actually work with it.

To: WD0HCO, W8TOW, K7FM, W5MAZ, AA6DQ & K8MFO

Many thanks for responses to my post seeking a J-36 value.
It seems I got a bargain, for GU0UJC bought it for ï¿½5, and
I paid him ï¿½10 (US$15.70).

I've been looking for one for quite a while, for I was given
a J-36 in 1962, whilst living in Libya (5A3CJ). Doubtless
it had played it's part in the WWII defeat of the Desert Fox.
In 1964 I sold it in Bahrain (MP4BEQ) for 30 Gulf Rupees
(US$6.30) when I built a Heath el-bug - a bad move altogether!

It was pretty dirty, with someone having generously oiled the
pivot bearings. After complete disassembly and cleaning,
(black crackle has come up nicely, contacts are polished,
nickel-plated hardware left without attempt at polishing) it
now looks OK. Even with the help of a 'scope, setting the dot
contact for correct ratio and absence of spurious contact
bounce has proven difficult. Learning once again to form
dashes isn't easy either!

I can't imagine it was used commercially around here, so I'm
still guessing to which of Guernsey's post-WWII hams it might
once have belonged.

Source record: 67695
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

FS: Sigma XR3000D HF amp. Covers 160 to 10 meters. Tuned input. 3600 volts on the plate at idle. Easily does 1500 out with 100 watts of drive. Weighs 92 pounds. Is about 1 1/2 times the size and weight of an SB-220. Seperate plate and filament xmfrs. Can be wired for 120 or 240. One meter is dedicated to plate current and the other can select grid current, plate voltage, and relative power out. Hs standby/operate switch.

THE PROBLEM: The original bandswitch has given up the ghost. I do have a JVC ceramic replacement but it is not identical to the stock unit. It will fit in the space of the original but since the tuned input select switch is tied into the output bandswitch so will need to work around the tuned input switching. The replacement bandswitch is included.

Cosmetics of the front panel are nice and clean. Deck is super clean inside. No tubes. Needs a pair of 3-500Zs or 3-400Zs.

The bread: I need $275 for this 92 pound monster. Buyer to pay shipping on approximately 105 pounds double boxed and packed out UPS and insured.

Hello...........NG
I will be traveling from west coast,
San Diego all the way up to San Francisco
(Or anywhere else if need be....)
Anyone need any big heavy items picked-up & delivered
(Jukeboxes, tape machines, radios, consoles, pinball machines etc.)
Leaving Cal. end of next week. For back east
Plan on being East coast the second week of May.
Please let me know if you need anything.
Thanks....... Mike

1026. FS Commercial 4cx250B (pair) amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-22 00:00:00 UTC
From: ljl160@aol.com
Message-ID: <20000422105919.02092.00002274@ng-da1.aol.com>
Source record: 67700

FS commercially built 4cx250B pair amp complete. Size 18 deep/ 12 high/ 7 1/2 wide. Freq now is 180-200mhz. Front panel has 4 or 5 inrow lighted pushbuttons for function, recessed panel meter for output, and a few tuning controls. Cabinet is stainless steel and I believe unit was made in Germany. Professional lab type wiring. I was gonna convert it to LF but I will surely never get to it with my art13 project going-hi! BRO Thanks and 73s Lew-KlNDV
PS: You do need power supply for it.

1027. FS: Swan WM-3000 Peak Reading Wattmeter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-22 00:00:00 UTC
From: k3ac@aol.com
Message-ID: <20000422114457.19757.00003243@ng-ba1.aol.com>
Source record: 67701

For Sale: Swan WM-3000 Peak Reading Wattmeter - 200/500/1KW/2KW scales, reads peak or average power, forward/reverse. Large meter - easy to read black markings on white background. Like new condition, works perfectly. Great addition to any Swan station. Asking $135.

Bob, K3AC

1028. FA: Last Day - Heathkit VF-1 VFO

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-22 00:00:00 UTC
From: larryj@user2.teleport.com
Message-ID: <8dshrk$je2$1@user2.teleport.com>
Source record: 67702
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

FA: Last Day - from a local estate - a nice Heathkit VF-1 VFO. Has the power plug for typical Heathkit, etc. transmitters, and the RF cable with an RCA plug. Good condition, original knobs, nice dial tha works smoothly. A nice addition to your Heath or other BA transmitters.

The VFO covers the "Standard" 160 through 10-Meter bands, including a separate range for 11 Meters, which used to be a ham band when this VFO was made.

Here's the URL:

1033. Navy Receiver RCH Free to good home

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-22 00:00:00 UTC
From: Jim Allen <jim.allen@the-spa.com>
Message-ID: <3901E2DD.77BD@the-spa.com>
Source record: 67707

A friend of mine gave me this several years ago. It needs work which I will never tackle. Can be rack mounted (one side of the racking plate is bent). Cabinet was repainted, but well done if not original.

5 bands. Probably weighs 125 pounds with cabinet. Has documentation.

Pickup in Western Mass....but I might be convinced to meet you somewhere.

Jim

For sale:

Astatic D-104 desk microphone, amplified. Has original locking PTT bar and clip
included. Bottom cover is not original, but is un-noticeable. Some minor pitting,
and small nicks on the stand, but otherwise in decent shape and works well.
Will sell for $35.00 plus shipping

: It certainly appears as if they are down, I have had the same result =
: myself!

It is a classic case of domain name hijacking, apparently perpetrated
through netfirms.com -- a Canadian registration firm.

What happens is this: Someone breaks into a domain name registry and
changes the IP address record so that www.arrl.org maps into the wrong
IP address. The incorrect mapping propagates throughout the DNS system,
and pretty soon the real www.arrl.org "disappears".

As I write this, a traceroute to www.arrl.org winds up at netfirms.com,
and a whois inquiry listings netfirms domain name servers as the primary
ARRL servers! Clearly, somebody at the ARRL has either forgotten about
putting a password on their domain name administration records, or else
has had their Network Solutions password stolen.

The current record (note the update date) is included below, because it
will be necessary for someone to use the one address which probably
works (or a telephone) to contact one of the people below and have them
restore the proper address mappings.

Rick charges 1000.00 for a full refurb plus shipping and that does not count what you have into the radio to begin with. When you get it back it is like brand new and works like a frequency meter. You probably would not think twice to spend a grand on a computer setup that you won't get half that for it next year. At least the 390A with good care will hold that value and will outlive us all... Hi Brian,

Nope, I was dead sober when I wrote that reaction last night. I just got fed up with this sort of nonsense taking up bandwidth. And not only here in the news group, but on the general media here as well. At least five Dutch correspondents have flocked into Miami, giving detailed reports on the tensions there. And then there are some on Edwards too, also cluttering the television in stead of giving actual news.
It seems way out of hand - all that attention for what is actually a rather local & small problem, at least viewed from this side of the ocean.

When Radiomatt seemed to try to start up the discussion here - I have to admit I did not quite catch the joke there - I blew my top. Well, he got it going all right and I do agree with his point of view, after reading his explanation.

What bugs me, basically, is that quite often long strings of discussions will bloom up in this news group that have nothing to do with the subject matter, at least on an international scale. I'd by far prefer it if we could refrain ourselves to boatanchors here and leave local politics out of it. That explains my possibly rather overwrought reaction...

Cheers, Wammes

I had one and it worked rather well. Shortly after I bought it, the price of the four finals went sky high and I recall that 2 of the tubes cost more to replace than the amp did brand new. I think they were 572B if my memory is working. Then the company changed hands and you couldn't get decent tech info. I don't recall it having the WARC bands on but some mods were floating around that could work for those bands. My inclination would be to stay away.

DRAKE CW STATION
Drake CW STATION
I have put together a nice Drake CW station from my extensive drake collection... sold as a package deal for now....Drake 2C rcvr with calibrator..this rcvr has sharp filtering.. .4oohz..2.4..and 4.5khz for receiving AM...selectable upper and lower side band...selectable agc slow or fast. rig covers 10 thru 80. The 2NT is one great CW sounding cw rig either xtal or vfo controlled uses timed sequenced keying (grid block) and is adjustable for full breakin, etc. The VFO is a real beauty from my collection the WRL V10 uses 3 tubes has built in regulated pwr supply. this vfo is close to being mint for one thats almost 40 yrs old..you wont find one better. I have manuals for all this stuff...will also include some connecting cables for rcvr mute and side tone connection. the rest you have to get your self. All this stuff looks great and works great....$445 plus shipping for 35 pounds

1097. FS DRAKE 2C

NO matter how many of you choose the juvenile tactic of ridicule -
"You MUST be a sad and bitter old man", fact is folks like Joe and me
quite assuredly get as much and MORE satisfaction out of life than the
latest crop or "welfare/slowcode Extras"are likely to... And why
WOULDN'T we? After all , we have the reality that we lived in a time
when amateur radio had status and "class" - ham operators were held in
respect and esteem by those familiar with the demands to be met in
obtaining a license - as well as the knowledge required to place a
station on the air and keep it there. We also (STILL!) have
satisfaction in the knowledge that our licenses were obtained the
"hard way", in front of FCC engineers, and with the full spectrum of
both written and CW requirements that were common and appropriate for
their time period.

Sorry to burst your bubble, or any "satisfaction" YOUR hoped for
imagininary vision of some sad and tragically disgruntled OT may have
given you - but all is pretty calm, serene and generally upbeat on
this end - we just choose to indulge in a bit of open viewpoint on a
twist of FCC policy which we find disgusting... NOW, if OUR publicly
expressed opinions cause YOU seriously tight jaws or increased blood
pressure, well, you know where to take your problem...

I would like to try and duplicate the old QST transmitter called
the T9'er. It was 160m-10m cw only from the early 70's. It used
hybrid design and 6146 tubes with a 6gk6 driver. Anyone know
where I can get any of the adjustable coils it used? Anyone got a stash
out there?

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $45.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $60.

Marantz Model 2220B: Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $175

AR Inc: Stereo Amp, All solid state. $100. Please don't ask the model #. I have been asked this many times and unable to locate on the name plate. The serial # is: AA002291. It comes with the optinal wood case the face is Gold Alumi. With the following controls: Mode selector, Bass, Treble, balance and volume. In the upper left corner is a red LED and on the bottom right is a normal/monitor switch. I would rate it a 7 on appearance.

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume,
volume, bass, treble and tone shaper controls. All solid state $125

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $115 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

RS Pro 30 Scanner: Hand held 16 channel Digital scanner. Looks & Works good, but the battery cover plate is missing $35.

Shipping is extra. Please reply to my email address.

Thanks

Well Said, Gary. Blood pressure not up here. Just doing fine! Isn't it funny how "big" these ham operators are hiding behind their false names? One of them was even smart enough to post my name on here (as if we all dont know how to use QRZ.com) I wonder if that guy in kentucky will be on the newsgroup tomorrow between running down to cash the welfare check and working all the DX with his new 5 WPM license!
I sense the rest of the pack is cranky today because they dont get my 5% "real ham license" discount. Oh well. I'll even work the lids if it counts as a new one! Most of these guys didnt even listen to the healthy debate and discussion -- like typical operators, they're full of hot air. Been trolling with this topic for a while now. I think I'll head for rec.harley.davidson for a while and enjoy one of the other hobbies.
73 (note to you newbies, it's not 73's ....73 is singlular...real hams know it too).

Dear foreign friend,

I'm Dutch. We FOREIGNERS inhabit these *international* groups as well, you know. Local American problems hardly interest us. Yes, the news - as they call it - carried the story of the little boy over here as well. With much more detail as the children starving in Africa, but then, camera teams are more expensive to travel out there, I suppose.

But what exactly are you trying to tell us? Is there a shortage of handcuffs in the USA? Or possibly of R-390's? Should one handcuff children to boat anchors just in case, on a daily basis?

Or are you more then slightly intoxicated rather early in the day... Surely there must be a news group more fitting for the subject somewhere. Elsewhere!

Cheers, Wammes

Yeah, I admit it was a bad joke, on two or three levels; the prime one was to see if it could make the posting (ANY posting) eligible for inclusion in this newsgroup. I could justas easily have said "Janet Reno uses R-390 to monitor raid" or whatever

If I offended, I apologize, but I'm in an overload state from this media frenzy created by the news companies to further their own ends. God, has the news gotten this bad already? (somebody once said that all newspapers and magazines will soon look like "PEOPLE" magazine.

even the Miami relatives are cutting book deals...reminiscent of the lady(?) who married a Millionaire. She supposedly will pose nude for Playboy for $100,000...this after she said she was distressed by the publicity...she said this on Rosie O"donnell, Regis and Kathy Lee, Good Morning America, the Today show, etc.

When are we going to see that the "media" is being manipulated, and also manipulative? Half of what you see in the papers is just rewrites of press releases!

The media will create controversy just to get viewers/listeners/readers so they can bombard us with ads for razors, toothpaste, KungFu academies, home delivery of mattresses, politicians, and home study courses in real estate. An hour at the controls of an R-390 will be more informative and entertaining that the garbage on ther mass media.

>Whats the best procedure to use and how long should line voltage be kept low
>at
>what voltages and intervals bringing up to full line voltage is best.
>Thank you in advance,

Here's what I'd do:

1. Remove all tubes from the rig
2. Make up an adapter consisting of two silicon diodes rated 2000 PIV, 1A or more, with a connection for a series milliammeter and parallel voltmeter. The idea is to have a device which can plug into the 5V4 and 5R4 sockets which will rectify the AC and charge the electrolytics, while permitting monitor of the current drawn and the voltage developed. A similar device is needed for the 6AL5 bias rectifier, but its voltage and current levels are much lower..
3. Figure out how much current the various bleeders will draw at full voltage
4. Plug the adapter into the 5V4 socket, and the rig into a Variac. Turn the voltage up slowly, watching the voltage developed and the current drawn. Keep the milliammeter below the calculated current as voltage is increased, until the normal B+ output voltage is reached. Note that full line voltage will probably not be needed to reach full B+.
5. Turn everything off and make sure the B+ is zero. (DON'T assume the bleeders are still good!!!)
6. Move the adapter to the 5R4 socket, and repeat for the high B+.
7. Turn everything off and make sure the B+ is zero. (DON'T assume the bleeders are still good!!!)
8. Repeat for the 6AL5 bias rectifier.
9. Remove adapter, replace all tubes, and fire up into a dummy load to check for normal operation.

A lot of work? Yep - but it beats ruining a choke or transformer that will be difficult to replace.

> out there?
>
> Doug
> N4IJ

I'm not sure why this is in boatanchors, since the tubes are only there to
generate the power, but then it's hardly a surprise since I keep seeing
Ts830s being advertised here, along with a lot of other off-topic items.

rec.radio.amateur.homebrew might be a better place.

For what it's worth, the T-9er was a two part article in the fall of
1971, I think September and October, though it might have been October
and November. It also showed up in the 1972 and 1975 Handbooks (which
I have, so it was probably in others).

The adjustable coils were actually J.W. Miller, not Millen.

I doubt you will be able to buy Miller or Millen coils anymore;
even if you can I bet they'd be expensive.

The real trick is to track down the specs that go with the part numbers,
by looking in old magazine ads (maybe even ads in the back of the Handbook)
or finding someone who still has old catalogs who can look up the parts.

The parts list is somewhat helpful, since it lists the inductance of
those variable coils. You should be able to get by with using coils
of similar inductance, even if you can't get the exact dimensions.
I thought Digi-Key listed variable inductors, and other distributors
may carry them.

Better yet, buy or scrounge some suitable coil forms (and slugs) and
wind your own, using the inductance listed in the parts list, and using
the standard equations for figuring out the number of turns needed
for the inductance. You may have to do a bit of fidgeting to get
things exact, but it sure will be easier and cheaper than tracking
down and buying pre-wound variable coils.

There are some air-wound B&W coils specified, but it looks like enough
information is given so you could duplicate by hand-winding.

The RF chokes are fairly standard, so it should be easy to scrounge them up.

Jack,
I have a Gonset G66B and G77A transmitter. The Reciver has the matching powersupply/speaker and the transmitter has the power supply/modulator.

The work fine. They have been mobile so the cabinets have some scratches. All the knobs are correct.

I also have a Gonset G-76 with the AC power supply/speaker if you have any interest there.
73,
K8XU

Phone number is 614 436 9000.

You can e-mail or call if you have any interest.

It does not matter what we as HAMS want or think. What controls the direction is the radio manufactures. Icom, Yaesu, Kenwood know that they will sell more if people are not burdened with learning the code.

You will see code removed from the requirments within 5 years, if not you will see fewer and fewer new radios designs. When was the last time that YOU bought a 3000.00 rig?

Myself, I think that code has its place. You can cut through a lot of interferance that voice will not. Allthough with the invent of the Internet, a person can do the same with a lot less headache.

HF is a pain. You have to know what bands, how to tune an antenna, how to tune a amp. If you dont have anyone to show you it can be a expencive hobbie.

When was the last time YOU took a novice or tech into your home to show him how to talk HF? 5 or 10 people a year is a drop in the bucket.

Do you even have a place in your town that you can go in and BUY a HF rig? Yet how many computer stores do you see?

Why do you think that WalMart is not selling HF rigs?

just my 2 cents, dont flame cause I just dont care anymore.

Lee

I have a mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. NOTE: Please REMOVE the "04" to reply or call 334-347-5281 day/eve.

1157. Re: SX 115 Value?

> Whats an SX 115 worth?

I'd estimate current "market" (not E-Bay) value at $600-800 (speaker & manual affecting $$). I paid about $600 (it was part of a complete station) for mine (in about 8-9 condx) three years ago. Saw one at a local swap about 5-6 years ago for $600. This is the second most valuable Halli after the SX-88 (those at $1200-1500 "market" value). The '115 is a good RX, sold my 75A4 after getting mine. Lots of folks in the Halli collecting community will be eager to buy yours, there weren't that many made. Enough demand so that you can probably stick with a pick-up buyer (I drove about 750 miles to get mine), saving the risk/hassle of shipping.

Joe,
I guess those who have Honda's are less of a motorcyclist too, using your reasoning.
I held a novice license in the late 70's but only being able to use cw got boring thus losing interest in the hobby.
Was happier with my Ranger and Thunderbolt on 11 meters but no i have an interest again due to the lowering of code requirements. Its my opinion it will help the hobby, heck I learned to drive on a standard transmission again using your reasoning drivers today with automatics are wimps and not to be respected.

I've stumbled onto a few of these big tubes, and a blower and socket for one.

Any ideas on how to test a tube that wants 3000+ volts at one amp on the plate,
+200 volts at one amp on the bleepin control grid? Without killing myself?

My Hickok tester isnt quite up to the task :(

1165. FR: RACAL dual speaker (19" rackmount)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-24 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20000424162525.03467.00002623@ng-fu1.aol.com>
Source record: 67625

This is the MA6721 dual speaker made by Racal. I bought it new, but never installed it ...it has been on a shelf all this time. Has two separate speakers behind metal grills in a RACAL 6217 type of beige color rack panel. Each speaker is shield by a metal box, and each has its own on-off switch. Connectors look like DB-9.
I sold one on EBay awhile back for over $100+ shipping.
I'll sell this for $110 shipped Priority Mail in US. EMail only please.
There's a picture at:
<http://albums.photopoint.com/j/ViewPhoto?u=453256&a=3357147&p=18590405>

Please note that the four RA6217s in the photo are not included nor are they for sale! The speaker is placed in an opening left by a fifth RA6217 which I moved to another equipment rack.

Is that a triode, I forgot
Call Mayer Guileani and ask him to put you in touch with Attica prison in
New York to test the chair.
Run the heater off a motorcycle battery
Store 200V for the grid on several 500 Mfd cap's quickly apply and throw the
chair switch
If it takes out the electric panel consider to have good conductivity.

Dont get killed !!

Source record: 67635

Does anyone have a Hammarlund HQ-170/180 adjustable feducial they could sell? This is the clear plastic window with the vertical hairline, on the right side of the receiver, which is driven by the small black knob called "dial calibration" in the manual. I'm restoring an HQ-180 for a friend and the window on his radio is badly scratched. I could also use an S-meter and clock cover if someone has any extras.

Thanks,

Hi to all:
I just got ahold of a Ameco TX-62 and matching vfo. I'm looking to use
it as a transmitter for Oscar (cw, of course).
Can someone give me a quick tune up procedure. I've been thru Drake and
Swan transmitters in the past so it's not foreign to me. But I could use the
plate current to load up to and other stuff.
Thanks for the info.

I have been trying to access http://www.arrl.org since 1700Z on Monday. I get a DNS/No entry error back. Also tried http://www.arrl.net, with the same result. This evening, I tried http://www.arrl.com and got this nasty message: "THE SYSTEM IS F**KED Pirate radio 4 life baybee@#^#@ brought to you by the Coffe Mother F**kers, werd up." Then I tried arrl.net and .org again and got the same thing. It looks like the ARRL has been hacked by broadcast pirates, alas. Some of the messages I have in to what were previously known good email addresses at ARRL have bounced back to me, so I cant check it out with them. I will probably try calling them on the phone tomorrow, though this evening I heard nothing on the voice bulletin out of W1AW. Is it possible this could be going on and they not know about it? Does anyone have any idea what is actually going on?

Well, not exactly, but OTOH cars with manual transmissions *are* demonstrably more under the control of the driver, whatever his skills are. A good driver has more control of a car with a manual transmission, but a poor driver also is more likely to lose control of one. WHat that has to do with CW and ham licenses, I am not sure. . . _ . _

For the same reason that they do not sell 8" reflector telecopes,
mandolins, rice-paper kites, or any CDs with the "F" word on them: they
only sell what the consumer-mass wants. If at least 50 million Amaricans
don't want one, you won't find it at Wal-Mart.

The ARRL has been a kind of hard luck organization when it comes to computers. Yes, they have definitely been hacked- little doubt of that. I'm sorry it had to happen to them. No doubt they will start putting a lot more effort into security after they get the mess straightened out. I just hope to God that the hackers didn't trash important records, but those guys can be pretty malicious if they put their minds to it. I sure hope they did not wipe out any DXCC computer records. That's one that happens to matter to me. I hope that ARRL did frequent and thorough backups! Siiiiighhh! 73, K3KY

I haven't been able to get to any ARRL web pages since Sunday last using the text URLs, and have been trying all evening to reach them using the numeric IP addresses. All attempts have met with "busy" messages. So in addition to the hijjacking of the ARRL domains, the phoney vulgar pages that have been coming up, someone (the same someone[s]?) has no apparently launched a denial-of-service attack on both the .org and .net domains. Email to adminstrative .org and .net addresses is also bouncing. . .

Sorry to follow up on my own post, but I just realized what should have been obvious: The hotmail address in the whois record more than likely belongs to the person who changed the DNS address records in the first place. It appears that email will not work, and that a land line or a direct radio contact will have to be used to reach the ARRL instead.

Yes, the arrl.org domain was hijacked this weekend and both
www.arrl.net and www.arrl.com are CNAMEd to www.arrl.org.

>This evening, I tried http://www.arrl.com and got this
>nasty message: "THE SYSTEM IS F**KED Pirate radio 4 life baybee@#^#@
>brought to you by the Coffe Mother F**kers, werd up." Then I tried
>arrl.net and .org again and got the same thing. It looks like the ARRL
>has been hacked by broadcast pirates, alas.

To be precise, the ARRL machines themselves don't appear to have been
penetrated. The arrl.org domain was hijacked (pointed to different DNS
servers at netfirms.com), and the hijackers pointed the hijacked
www.arrl.org to a different server (also at netfirms.com). Once the
arrl.org DNS registration is corrected, things should be back to
normal. If anyone's been 'hacked', it would appear to be netfirms.com,
a Canadian web hosting company.

>Some of the messages I have
>in to what were previously known good email addresses at ARRL have
>bounced back to me, so I cant check it out with them.

That's probably from before the faked arrl.org DNS records were put on
netfirm.com's DNS servers. At this point, www, ftp, and mail services
for arrl.org have been diverted to one of netfirm.com's machines.

>Is it possible this could be going on and they not know about it?

It's possible that none of this is going to show from within the ARRL
local net, depending on how they have their local DNS servers set up.

I had no problem hitting the web site earlier using the ip address.
Note that it's also possible that ARRL pulled the plug on their web
server without realizing their machine hadn't actually been penetrated.

>So in
>addition to the hijjacking of the ARRL domains, the phoney vulgar pages

It may not be as bad as it looks. The arrl.org domain appears to be
used as the 'main' domain. I suspect you'll find that administrative
arrl.net email addresses are aliased or forwarded to arrl.org
addresses, and since the arrl.org domain has been hijacked, those end
up bouncing when they hit the mail server the hijackers have MXed for
arrl.org. Check the 'Received' lines on those bounces, not to mention
what machine is actually doing the bouncing.

I'm debating as to whether or not I should call them. Most likely
their tech people are already on top of this, and I'd just be getting
in their way.

The current site is netfirms's second DNS machine. The address does
show up in an Exodus netblock(NETBLK-ECI-7). If anyone wants to point
a rwhois client(I don't have one set up here) at Exodus's server, I'm
fairly sure you'll find it's in a sub-block owned by Netfirms.

This is an easy question to answer, Do you want to use this tube for yourself or do you want to sell it off for a profit? If you want to use the tube yourself, build the amplifier deck and supply to support it and when its done insert tube and test it, its that simple. If you want to sell it, thats easy too, Bring it to e-bay, and write up this ad..."Hi, I know nothing about the jabroni tube, its a big fat son of a bitch, and I'll bet it can handle some real big power (probibly as much as at least 100 pills or more) I am not a ham, so I have no way of testing this thing, Due to the nature of this item I can not guarentee it so PLEASE BID ACCORDINGLY, all sales are FINAL (pun intended)....Set a reserve at $500.00 and let the parannahs go at it!! You'll be surprised trust me! Now, do you really need to test that tube?
Nope......Good luck

Will's right. Just got the same garbage upon going to www.arrl.org/ I've
been online for 13 months and it's the first time I've personally witnessed
hacking at work and now I see what it's all about. Somebody's mad at the
League and I can't understand why, ho..ho..ho. Might be rebellion against
the stance taken on the welfare hams issue? It's however no way to show
possible discontent and whomever is responsible should be kicked offline,
thrown out of the League, banned from ham radio and exiled to Devil's Island
as was Papillon.

I'm not entirely sure of that, at least as far as the ARRL is concerned. The plug appears to have been pulled on the real ARRL web server, and the SMTP servers for both the .net and the real .org domains appear to be disabled. Some have speculated that this is a DOS attack, but it's also consistent with an admin responding to reports that his server's been hacked. Also note that while the domain hijacking (which is likely to go unnoticed from behind the ARRL firewall) appears to have kicked in late Saturday or Sunday (depending on how long it took to propagate), the faux web site didn't go up until yesterday evening, likely *after* most ARRL people had left for the day. Timing makes it look like some ARRL admin may have gotten called in early this morning once news of the faux web site got around.

Netfirms, I'll agree, so far appears to be clueless. Their DNS and web servers, at least, appear to be quite "0wn3d" by whoever did the hijacking. ARRL merely needs to get their domain back. Netfirms is likely facing having to wipe and rebuild their servers.

The problem was detected early Monday morning, a few hours after the
bogus change began to take effect. The registrar was notified
immediately, but as Ben says, it takes time for DNS changes to
propagate.

The Web server did go down last night. While the timing is suspicious,
I'm not sure but what it was a "normal" failure. (Needless to say, we'll
be keeing a close eye on it.) I don't believe any servers were pulled
off-line (why would they be?) Certainly the Web server, for which I'm
responsible, was not.

Presumably the IS folks here at ARRL will be tightening up the security
on the domain name registration!

> Netfirms, I'll agree, so far appears to be clueless. Their DNS and web
> servers, at least, appear to be quite "0wn3d" by whoever did the
> hijacking. ARRL merely needs to get their domain back. Netfirms is

It may have been. There's alot of hacking type
software out there, even some webpages dedicated
to providing such as www.hackology.com for example.
Best thing to do is put a password protected
firewall that *also* reads the unique serial number
of the Pentium II or III Processor installed within the
computer that is accessing the page to edit.
In this way ONLY the authorized computer can gain
access to the HTTP coding. Just a thought.

1210. Block of 60 rooms now available, Dayton Airport Inn

Hello, Will.

I just found it today (Tues. morning) and it's the same message. It's hard to believe it's still up there, but I think people were out for the Easter Holiday. Looks like maybe some kids got bored during Easter break.

I tried to reach the ARRL too. I looked on the Network Solutions WHOIS server for web contacts, and got my messages bounced back too. The one hotmail contact seemed to go through. I'm also trying to reach someone in local ARRL group that might have contact info.

Were you able to reach anyone?

The Network Solutions page looks like it was changed on April 22 and the database updated April 23.

http://www.networksolutions.com/cgi-bin/whois/whois?STRING=www.arrl.org

Also looks like from the web page info for the one that's up now was created on April 22 too. The local time was listed as 3:01 PM Local Time, with a GMT of 7:01. So it sounds like the hacker(s) were from the East Coast. I wonder if someone with password info on the ARRL staff might have kids who like computers and snoop???

73,

Mike KF4UVO

In 1957 when I became a ham, I bought a Belmont BC-348-R for $35.Worked hundreds of countries on CW with it and later did the same on SSB. However, when I was the chief engineer of a 10 KW AM daytimer, I used its towers at night, along with a homebrew 5 KW "ham" rig with my own power divider/phasers and worked all over the world on 75/80 meters. I still used the BC-348 then, even though I also had better receivers.

Especially since the hijackers put a one day TTL on their fake arrl.org
DNS records.

>I don't believe any servers were pulled off-line (why would they be?)

My error. For some reason, the ARRL mail servers appear to be
unreachable from the free shell site I use.

>Presumably the IS folks here at ARRL will be tightening up the security
>on the domain name registration!

Tighten up the DNS servers, too. Zone transfers appear to be
completely open.

Unfortunately, that probably belongs(or belonged - they probably
ignored it once the domain got hijacked) to the hijackers.

Source record: 67588

Not a PLL problem, it's most likely a problem with the preselector filter selector circuit. The preselector range is selected by DC bias applied to cheapass diodes (hence the horrible 3rd order intercept on these radios) which select the signal path to the appropriate bandpass filter. Bet the radio got hit by lightning and fried the decoder circuit. You *need* a schematic to get to the bottom of this. Once you find the input to the first mixer, you can bypass all the preselectors and I'll bet you get signals (LOTS of signals) on all bands, thereby verifying that the problem is the afore-mentioned circuit.

Good luck - you'll need it! Remember on these cheapo radios you get ONE chance at replacing components on the board before the foil starts lifting. BE CAREFUL. 73 - John

David,

Actually, the ARRL site was not touched at all. It was the Network Solutions
site, where www.arrl.org is translated into a physical internet address, that
got hacked. The domain name arrl.org was redirected to the hacker's site.

Source record: 67501

I altered mine to utilize sensitive 7-pin "miniature" tubes for the two RF and convertor stages. It was quite simple to do. I was a freshman in high school at the time (1957). Since it only goes to 18 MHz, I used convertors for the higher frequencies.

I also used the matching BC-375-E as the basis for the final stage of a 500 W AM rig. I used supermodulation similar to what commercial AM stations were using at that time.

--> That'd solve nothing, really, that wouldn't be solved simply by having a unique key on the system, like ssh uses. Having it built into the hardware doesn't really make it any more secure. ssh can use a public/private key pair to ensure a machine is who it says it is. The only easy way around it is to compromise the remote machine and steal the private key -- and if someone could do that, they could just as easily read the processor's serial number and fake that. The big difference is you can change a compromised key. You're stuck with a compromised serial #.

David Brodbeck, N8SRE dmbrodbe@mtu.edu
finger gull@cyberspace.org for my public key block.

HF is a pain? I thought that learning about radio was part (a big part) of what ham radio is about. What fun would it be if it didn't require some learning and effort?

Sure, the internet is fast and easy. It has its place. But it's no replacement for ham radio, with its challenges and pleasures.

I'm not trying to flame. Ham radio isn't for everyone. If it ever becomes that simple and easy, I'll no longer be active in it.

Well, by God, I'm glad to hear an AC power cord can give "tighter bass and more specific image location within the soundstage."

I'm still trying to figure out how people can spend thousands of dollars for speaker cable. I guess a "reference" power cord had to be next.

Thank goodness this lunacy hasn't hit ham radio. Yet.

What do you mean? I have one of these cords on my transceiver and
linear, and it added depth and clarity to my transmitted and received
audio, and gave everything a qunatum leap to my performance
envelope....(GRIN)

I think the people who buy these cords don't stop to think that after
their six feet of audiophile power cord, they have dozens of feet of
crappy house wiring, a questionable utility service drop, and then who
knows what out on the utility distribution poles.

n search of the perfect signal, I am looking for an electric supplier
that only uses oxygen free copper in its generator windings.

Yes I was astonished...that YOU aren't using one. The thing has been out since 1998. You're truly clueless about this, are't you?

About the Model 101: Many Boatanchor aficionados use them to improve the performance of the R-390 series of radios. In fact, I daresay that the R-390 would not have the reputation it has if it weren't for the Model 101 Powr Cord (with special-order mil connectors).

Many of us also use STAX headphones (only $3500) to hear every nuance coming out of the audio deck, and of course to reduce microphonics from the tubes we use a type of flotation device used to isolate turntables from noise from the floor (the best ones are a block of marble on springs).

Before these performance enhancements came along, R-390s were thrown into dumpsters or sold for $10 at fleamarkets, or crushed into a landfill.

I

David, you're just cheesed that you didn't think of it first! But here's a freebie that you can patent yourself. Audiophile Sheetrock, and\or Audiophile Furniture!. Just think of the possibilites of producing these products specifically with the idiotphile im mind. It isn't necessary that the stuff doesn't work at all, just get one favorable review and your in fat city.

John Del

It's a damn good thing it has great response at audio frequencies,
especially if you're using the AC power lines for speaker wires (which opens
a whole 'nother audiofool can of worms!)

Nope...too late. The CES in Chicago about 8 years ago had audiophile wall construction materials that had a sheet of sorbothane between two layers of sheetrock. This was used to cover the sandbags that were stuffed into the walls for deadening. Popular science that year, had a story on interlocking urethane foam blocks that could be used to line the walls of a listening room for sound deadening, and isolation, so that neighboring apartments would be free of the drone of a bass line from an intrusive stereo.

And audio absorptive furniture has been a staple of the CES for years.

Got to get up PRIT--TEE early in the morning to get ahead of these audiophiles.

Remind me to tell you the one about the Micronta clock digital clock, that when plugged into the same outlet as teh power amp, became a power conditioner. (this was seriously presented in a White Paper at CES.)

CD Rings anyone?

1282. Trio 9R-4 receivers vs Lafayette HE-10/KT200

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-26 00:00:00 UTC
From: Cortland Richmond <ka5s@saber.net>
Message-ID: <3907C961.89200A6B@saber.net>
Source record: 67541

I see some differences between my 9R-4 and pictures on Mr. Hanzawa's and Mr. Okada's sites. Specifically, the 9R-4 I have has the RCA jack on the back panel mounted above the antenna connectors, rather than below. Also, it has a BFO pitch control mounted just below the main tuning dial. While this might have been an added modification, it appears to have the same attaching hardware as the S-meter and therefore could very well be a variant type between the 9R-4 and the 9R-4J.

There is a difference in front panel attaching hardware used on HE-10's and KT-200's from the 9R-4. The 9R-4 uses cross-head screws to secure the panel to the cabinet, but it uses straight-slot screws to secure the S-meter and (in my receiver) the BFO pitch capacitor to the front panel. The Lafayette receivers use cross-head screws for the S-meter as well (and on these receivers the BFO capacitor is mounted with a threaded nut, not screws).

I have two KT-200 receivers, and one HE-10, and the Lafayette receivers show differences, too. One of my KT-200's uses the same five-pin socket on the rear panel as the 9R-4, the other KT-200 and also my HE-10 use an octal socket.

Without a date stamp it is not possible for me to tell if these changes occurred one after the other or were implemented as parts became available or ran out.

Cortland Richmond, KA5S

if you want to follow up on the power cord debate, go to
rec.audio.high-end.
There seems to be two camps - one says "this can't possibly be
true, it's all in your head", the other that says "nonsense, I
hear a difference, so it's true"

I have tried some simple experiments, and I fall in the first
camp. On the other hand, there really is quite a distinct and
audible difference as you change to different kinds of
interconnect cables - at least this makes some sense because
the cables are carring the audio signal, and so they will act
as tone controls and what not.

I hope they develop special high performance BX or romex cable to upgrade
my house's housewiring. :-)

IMHO (YMMV), the only merits in their power cords is the thicker conductors
(14/3) and shielding. The shielding keeps the 120V sinewave from leaking
into the audio signal paths (hum). I think Belden wire and cable makes them...
For computer work.

Power cords can't affect the high frequency response. A well designed
power supply section in the audio amp should filter out any effects the
power cord could have.

> audible difference as you change to different kinds of
> interconnect cables - at least this makes some sense because
> the cables are carring the audio signal, and so they will act
> as tone controls and what not.

--> I'm not convinced that there's a noticable difference between good-quality interconnects. Bad ones certainly will affect the sound, but only if they're so bad that they allow hum into the signal. I don't think there's ever been a scientific A/B test that proved people could hear the difference between different interconnects.

I also don't believe (and A/B tests back me up on this one) that there's any audible difference between expensive premium speaker cables and ordinary zip cord of the same gauge. My speakers are wired with lamp cord, and they sound just fine, thanks. ;>

Bob Gradinski claims that he can 'hear' the type of wire being used in an interconnect upon first hearing of the system. Bob, however, is a little out there.

There have been some A/B tests of high end interconnects vs off the shelf interconnects from Radio Shack, or other general purpose interconnects, and there was indeed a difference in sound quality and performance. Julian Hirsch measured capacitive and resistive components and identified these two components as the culprits accounting for the difference. The very high end interconnects frequently employ complex winding and twist schemes, and different diameter strands in the conductors, ostensibly to compensate for capactive losses at the high end, and they do have an audible effect, but create phasing errors in the top end through the distributed capacitance across winding in high twist rates.

This is actually distortion, rendering the effort counter productive.

Hirsch noted that the differences were very measurable, and very audible in blind A/B tests, but that the most accurate signal transfer was with a good grade of high quality wire, of low interconductor capacitance, and high degree of consistency. Belden makes such wire. So does Canare. It's not very expensive, and it's easy to work with.

From my own measurements, the quality of the solder connection to the connector at the end of the wier often makes more difference in the measured resistance than the resistance measured over the lenght of the wire.

As usual, technique is important, and neatness counts.

> I also don't believe (and A/B tests back me up on this one) that there's
> any
> audible difference between expensive premium speaker cables and ordinary

You really need to go to a Consumer Electronic Show and whisper this in one of the rooms. It's as much fun as putting the word "Fragile" on a UPS package. Truth is, that for the same reasons as above, you're exactly right. Quality makes a difference, gimmickry does not. Nature in her wisdom, the rules of Physics are not repealed by effective marketing.

What most audiophiles don't get, and I am one, so I speak with kindness, is that the differences in speaker cord, interconnects, may be an order of magnitude smaller than the differences in the perceived sound caused by just closing the drapes in the listening room. Or adding another clothed human body.

For sheer entertainment for the dollar, there is no greater value than a Consumer Electronics Show. Just try not to openly laugh in someone's face. And nod knowingly. A lot. Or you'll never get away from the pitch.

> For computer work.
>

May I suggest one simple test to definitely show that a well designed
power cord DOES make a difference?

Simply plus a computer on the same line as a High-Definition amp (i.e.
the ones I designed have a
frequency response of 0 - 600khz, no that's not a typo !) and listen to
soft jazz music and you'll hear the garbage coming in. That's for other
high class amps (in the 3-10k$) because of...

> A well designed
> power supply section in the audio amp should filter out any effects the
> power cord could have.

I don't have that problem because all power supplies I designed are
Fully-regulated, including output.
Sumo amps uses the same design. And the power cord I use costs 50$
Because it is shielded and use a
separate ground. If you pay more than this, it's a steal. So the problem
is not really the power cord,
it's the supposed high class amp's power supply and the hype of very
expensive gears and tweaks!

Of course if your complete hi-fi gear cost you 1000$, ANY power cord or
Speaker cables won't make any
difference, but again, well designed speaker cables (in the 100-250$)
DOES make a huge difference on
expensive speakers. There is a LOT of B.S. in the high-end audio
industry, but not everything is...

That was the TICE Clock. Sold like hot cakes... and nowadays you can buy
BEAKS from a Quebec company
(no no names...) small bullet shaped "conditionner" for speaker. They're
made of steel I believe anbd
weight around 8 ounces each. You simply drop them on top of your
speakers and they make an incredible difference...in your wallet.

The show must go on... and it's not over 'till the fat lady sings (but
they never said if it had
to be in a valve amp or a solid state one ...darn.)

This is seriously off topic, but I can't resist one comment in this
thread. Before Christmas I was looking at CD mega-changers, the kind
that hold 200 CDs or more. At one audiophile shop I asked
them what the differences were between 2 different models of the same
brand. The sales guy explained how the higher priced one had much
better D/A converters, etc., and a variable output level. I asked
what that was for and he explained quite seriously that it was to
compensate for the difference between a 3 foot and a 6 foot interconnect.
You know that extra length means extra resistance and you have to
tweak the level up to compensate . . .

I left and vowed not to ever give that place any business.

There's a boatanchor connection to all of this.

There is an old saying:

"Human beings have the singular ability to ignore facts
that conflict with cherished beliefs."

Much of the audiophile tom-foolery is driven by human
psychology and the need to be part of the "audio" social order.
If one of the audiophile "alpha males" says that a certain
type of copper makes a noticeable difference, no member of
the pack is going to gainsay him- to do so is to risk
ostracism from the pack. The need for socialization
under the audio "alpha males" is so strong that the brain
of the disciple will actually manufacture a "difference"
in sound quality when accurate instruments show none,
or one too small to be discerned by the human ear.
Go to CES sometime and sit in on the demonstrations.
It should be required for anyone studying human social groups.

This same effect is evident in many boatanchor groups.
One or more of the group "alpha males" says that
full plate modulation in a transmitter is sonically
superior to any other type, even when measurements
of properly designed alternative modulation schemes show
little discernible difference (at least at average modulation levels).
Say differently, and you'll catch heck from the rest of the pack.
Watch the remainder of this thread and see ;-).
Find a group dedicated to a certain boatanchor, or
a certain microphone or audio processing chain and
you'll see the same effect operating in some fashion.
This sort of behavior isn't always "bad;"
socialization in human groups is very necessary.
But, when taken to the extreme, it can lead to group delusion,
such as is evident in the audiophile pack.

In any case, it's usually not profitable to disturb the
social order in a pack. The audiophiles (arguably) aren't hurting
anyone else, and we can only make enemies by attempting to
show them "the error of their ways." The audio "alpha males"
are enriching themselves at the expense of the pack members,
but that's been the way of the world since the dawn of time.
Call it the reward they receive for the leadership they provide.
In time they, like all despots, will over-reach and topple.
So mote it be, world without end, amen and amen...

I"m not familiar with teh TICE clock. The presentation to which I refer is the audiophile who discovered that his midrange improved if a Micronta digital clock was plugged into the some outlet as the amp. There was copious mathematics to show that the digital noise from the clock feeding back into the lines got into the power supply of the amp and enhanced the sinusoidal shape of the A/C wave, eliminating midrange distortion.

When I heard about this one, I went to the concessions and bought a bucket of popcorn, sat down in the front row and listened intently...when the speaker took a breath, I asked, "you mean to tell me, that the 250,000 ufd capacitor block and the regulator couldn't catch a noise component 185 db below the input wave?

The near riot of technical snow that followed from the 25 or so audiophiles in the room was very nearly as entertaining as the State Room Scene in 'A Night at the Opera."

To his near fury, the speaker was a friend of the engineer I went with. And we found ourselves opposite the lunch table.

Neither of us had anything that stained.

Maybe ! Line filtering is mandatory of course, but works mainly on emf noise, not all rf
induced noise will be filtered, but remember, all links in a chain must be carefully checked
and bring only part of the answer.

Going back to my radio, I really don't care about noise and static when doing so, and it's a good
thing... :-)

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

I work as an audio engineer in the recording and broadcast industry.

I agree with David Brodbeck that a really bad cable will certainly affect the audio quality. But I am always amused at the people who spend hundreds of dollars for a oxygen-free copper wire with gold-plated connectors to go from their CD player to their amp or pre-amp. Before a signal gets from the original microphone to your living room speakers, it has gone through dozens of connectors and patch panels, and literally hundreds, if not thousands, of feet of wire.
I can tell you with some authority, that most of those connectors are not gold-plated, and almost none of that wire is oxygen free.

After that journey, I am not convinced that travelling the last three feet over a $500 cable is going to improve the sound.

I've got 1/2 of a Drake C-line, and need an R4-C and MS-4 to finish it up. The details:

R4-C: Must be 5-position mode switch. I don't care if it has Sherwood or other mods, but must not be butchered. Filters and crystals a plus, but not required. Most important is that it be cosmetically very good, and with a minimum of corrosion on the chassis. Also must be complete, no missing parts please.

MS-4: Condition not that important, except must not be dented. Also, must have normal Drake MS-4 label in the front, and speaker must be ok. I don't need a power supply.

Please respond with price and condition to NeilR@innermedia.com, or you can call me at (603) 465-2788, or (yes toll-free) 800-962-2949

Thanks, and best 73's all.

I have a new-old-stock TCS-14 transmitter for auction on eBay. Take a look at the pictures -- this rig is beautiful !

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=314106127

and the blurb is

This is an unused and unmodified new-old-stock mint-condition example of the venerable TCS-14 AM/CW transmitter. Found as-new in-the-box, never put into military service, with no holes gouged out for coax connectors, no manky power cables grafted into the case, no mouse nests in the wiring, or any other defect usually found with these rigs. Covers 1.5-12 mHz, AM or CW, and with the appropriate power supply (not included), I believe it puts out around 35 watts AM, 50 watts CW. The inside gleams like the day it was produced, the panel and chassis have no corrosion or discoloration. Includes cabinet and shock mount feet as shown. Some of the packing material is stuck on the large front handle, but that will be easy to remove. I may clean that and repost a picture so I can see this fine old rig in all it's glory before it goes out the door. Unless you have a time machine, you're never going to find a cleaner example of a TCS transmitter -- don't pass it up !

Closes 4/30/00

Thank you.

GEE - and *I* thought that actually LISTENING to one in REAL LIFE situations was the ultimate test. It's certainly the way I bought MINE - now I guess I'll have to read the technical specs to see if I am REALLY hearing what I *thought* I've been hearing all this time - be a SHAME if I have to junk my nice radio because a set of printed specs NOW tell me it's no good...

That's as ludicrous as the "audio experts" on AM, who spend more time LOOKING at your received signal on a scope than they do LISTENING to what you are saying... "Eh, sorry OM, I missed most of your last transmission because I was busy putting yer signals thru my scope and spectrum analyzer - could you repeat?"

1353. WTB Collins 30L-1 any condition

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-28 00:00:00 UTC
From: Roderick Murray <rmurray@mitre.org>
Message-ID: <3909BDC8.DEDD6041@mitre.org>
Source record: 67410
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I am looking for a Collins 30L-1 amp in any condition (almost). I'm looking for a project amp so I am not really looking for a pristine piece. It doesn't need to be working. On the other hand I don't want one that is water damaged, run over by a fork-truck, cannibalized, or has a burnt out transformer. Other than that, it might fit the bill. If you have such an amp you would be interested in selling, e-mail me with your price and condition / description of the amp.

Thanks

rod (k1rod)

beware of gold. it is not as good as you say it is. About 20 years ago I had a major study as to why parts were falling off of aircraft circuit boards in use on a carrier based in miami - I had electron micrographs of the corroded leads, detailed chemical analysis, all the stuff you'd expect.

The cause was gold plating of the kelvar leads - the electrogalvantic potential of gold to iron is about 2.5 volts - the plating made the leads tiny batteries and they corroded through when dust kept them moist with the miami air.

the solution was to use tin plated leads - only 0.25 volts electrogalvantic potential - but I was not permitted to do this because the parts had to be burned in in an oven first and only the gold leads would stay unoxidized in the high temp oven.

anyway, I would go for tin over gold - a tight connection will actually block al teh air and corrosion will not be an issue.

Subject: Dentron MLA-1200 info wanted

I had one and it worked rather well. Shortly after I bought it, the price of the four finals went sky high and I recall that 2 of the tubes cost more to replace than the amp did brand new. I think they were 572B if my memory is working. Then the company changed hands and you couldn't get decent tech info. I don't recall it having the WARC bands on but some mods were floating around that could work for those bands. My inclination would be to stay away.

This converted military rig operates wide-band FM in the 23 cm. band. It
has a built-in 117 volt a.c. power supply. A collectors's item from the
1940's - 1950's era; this unit is working and may have orginally been
installed in a B-29 bomber as an IFF device. $50 plus s & h from
Schenectady, NY

Subject: FS: Misc Radio/Electronic EQ.

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $45.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $60.

Marantz Model 2220B: Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $175

AR Inc: Stereo Amp, All solid state. $100. Please don't ask the model #. I have been asked this many times and unable to locate on the name plate. The serial # is: AA002291. It comes with the optinal wood case the face is Gold Alumi. With the following controls: Mode selector, Bass, Treble, balance and volume. In the upper left corner is a red LED and on the bottom right is a normal/monitor switch. I would rate it a 7 on appearance.

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume,
volume, bass, treble and tone shaper controls. All solid state $125

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $115 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

RS Pro 30 Scanner: Hand held 16 channel Digital scanner. Looks & Works good, but the battery cover plate is missing $35.

Shipping is extra. Please reply to my email address.

Thanks

Subject: FS DRAKE STATION

DRAKE CW STATION
Drake CW STATION
I have put together a nice Drake CW station from my extensive drake collection... sold as a package deal for now....Drake 2C rcvr with calibrator..this rcvr has sharp filtering.. .4oohz..2.4..and 4.5khz for receiving AM...selectable upper and lower side band...selectable agc slow or fast. rig covers 10 thru 80. The 2NT is one great CW sounding cw rig either xtal or vfo controlled uses timed sequenced keying (grid block) and is adjustable for full breakin, etc. The VFO is a real beauty from my collection the WRL V10 uses 3 tubes has built in regulated pwr supply. this vfo is close to being mint for one thats almost 40 yrs old..you wont find one better. I have manuals for all this stuff...will also include some connecting cables for rcvr mute and side tone connection. the rest you have to get your self. All this stuff looks great and works great....$445 plus shipping for 35 pounds

From: "Gary - KJ6Q"
Subject: K7JOE your 99% wrong, now please GET OVER IT!!!!!!!!!

NO matter how many of you choose the juvenile tactic of ridicule -
"You MUST be a sad and bitter old man", fact is folks like Joe and me
quite assuredly get as much and MORE satisfaction out of life than the
latest crop or "welfare/slowcode Extras"are likely to... And why
WOULDN'T we? After all , we have the reality that we lived in a time
when amateur radio had status and "class" - ham operators were held in
respect and esteem by those familiar with the demands to be met in
obtaining a license - as well as the knowledge required to place a
station on the air and keep it there. We also (STILL!) have
satisfaction in the knowledge that our licenses were obtained the
"hard way", in front of FCC engineers, and with the full spectrum of
both written and CW requirements that were common and appropriate for
their time period.

Sorry to burst your bubble, or any "satisfaction" YOUR hoped for
imagininary vision of some sad and tragically disgruntled OT may have
given you - but all is pretty calm, serene and generally upbeat on
this end - we just choose to indulge in a bit of open viewpoint on a
twist of FCC policy which we find disgusting... NOW, if OUR publicly
expressed opinions cause YOU seriously tight jaws or increased blood
pressure, well, you know where to take your problem...

Well Said, Gary. Blood pressure not up here. Just doing fine! Isn't it funny how "big" these ham operators are hiding behind their false names? One of them was even smart enough to post my name on here (as if we all dont know how to use QRZ.com) I wonder if that guy in kentucky will be on the newsgroup tomorrow between running down to cash the welfare check and working all the DX with his new 5 WPM license!
I sense the rest of the pack is cranky today because they dont get my 5% "real ham license" discount. Oh well. I'll even work the lids if it counts as a new one! Most of these guys didnt even listen to the healthy debate and discussion -- like typical operators, they're full of hot air. Been trolling with this topic for a while now. I think I'll head for rec.harley.davidson for a while and enjoy one of the other hobbies.
73 (note to you newbies, it's not 73's ....73 is singlular...real hams know it too).

Subject: Millen Coils?

I would like to try and duplicate the old QST transmitter called the T9'er. It was 160m-10m cw only from the early 70's. It used hybrid design and 6146 tubes with a 6gk6 driver. Anyone know

where I can get any of the adjustable coils it used? Anyone got a stash
out there?

I'm not sure why this is in boatanchors, since the tubes are only there to
generate the power, but then it's hardly a surprise since I keep seeing
Ts830s being advertised here, along with a lot of other off-topic items.

rec.radio.amateur.homebrew might be a better place.

For what it's worth, the T-9er was a two part article in the fall of
1971, I think September and October, though it might have been October
and November. It also showed up in the 1972 and 1975 Handbooks (which
I have, so it was probably in others).

The adjustable coils were actually J.W. Miller, not Millen.

I doubt you will be able to buy Miller or Millen coils anymore;
even if you can I bet they'd be expensive.

The real trick is to track down the specs that go with the part numbers,
by looking in old magazine ads (maybe even ads in the back of the Handbook)
or finding someone who still has old catalogs who can look up the parts.

The parts list is somewhat helpful, since it lists the inductance of
those variable coils. You should be able to get by with using coils
of similar inductance, even if you can't get the exact dimensions.
I thought Digi-Key listed variable inductors, and other distributors
may carry them.

Better yet, buy or scrounge some suitable coil forms (and slugs) and
wind your own, using the inductance listed in the parts list, and using
the standard equations for figuring out the number of turns needed
for the inductance. You may have to do a bit of fidgeting to get
things exact, but it sure will be easier and cheaper than tracking
down and buying pre-wound variable coils.

There are some air-wound B&W coils specified, but it looks like enough information is given so you could duplicate by hand-winding.

The RF chokes are fairly standard, so it should be easy to scrounge them up.

Jack,
I have a Gonset G66B and G77A transmitter. The Reciver has the matching powersupply/speaker and the transmitter has the power supply/modulator.

The work fine. They have been mobile so the cabinets have some scratches. All the knobs are correct.

I also have a Gonset G-76 with the AC power supply/speaker if you have any interest there.
73,
K8XU

Phone number is 614 436 9000.

You can e-mail or call if you have any interest.

Hello--

There once was a young man named Bright
Who could travel much faster than light.
He set out one day
In a relative way
And returned on the previous night.

(With apologies to A. Einstein, I. Asimov, G. Gamow, C. Sagan, and J.
Campbell--
or whoever wrote this limerick.)

Subject: AudioPhiles Push the Envelope

I work as an audio engineer in the recording and broadcast industry.

I agree with David Brodbeck that a really bad cable will certainly affect the audio quality. But I am always amused at the people who spend hundreds of dollars for a oxygen-free copper wire with gold-plated connectors to go from their CD player to their amp or pre-amp. Before a signal gets from the original microphone to your living room speakers, it has gone through dozens of connectors and patch panels, and literally hundreds, if not thousands, of feet of wire.
I can tell you with some authority, that most of those connectors are not gold-plated, and almost none of that wire is oxygen free.

After that journey, I am not convinced that travelling the last three feet over a $500 cable is going to improve the sound.

Gold is good. It does not corrode and cause poor connections like other
metals do when they have been in service for a few years. I have some
gold plated connectors and some that aren't. The ones that are not,
develop poor connections over time and cause a very noticeable lack of
low frequency coupling. (like it sounds terrible) Wiggle the connector a
bit and it works ok again for awhile. No problem with the gold
connectors.

As far as interconnect cables go, it does make a difference in the sound
with different types of cable. I suspect that the difference is due to

the amount of capacitance the interconnect presents more than anything
else. Not saying it is better or worse, but different. Oxygen free,
silver plated or platinum plated wire, I am not convinced that one
matters. Or $500 cables.

beware of gold. it is not as good as you say it is. About 20 years ago I had a major study as to why parts were falling off of aircraft circuit boards in use on a carrier based in miami - I had electron micrographs of the corroded leads, detailed chemical analysis, all the stuff you'd expect.

The cause was gold plating of the kelvar leads - the electrogalvantic potential of gold to iron is about 2.5 volts - the plating made the leads tiny batteries and they corroded through when dust kept them moist with the miami air.

the solution was to use tin plated leads - only 0.25 volts electrogalvantic potential - but I was not permitted to do this because the parts had to be burned in in an oven first and only the gold leads would stay unoxidized in the high temp oven.

anyway, I would go for tin over gold - a tight connection will actually block al teh air and corrosion will not be an issue.

From: Will <catroach@mindspring.com>
Subject: AudioPhiles Push the Envelope

The amazing thing I did not realize about the "audiophile" market before I became a ham is that for all the mumbo-jumbo (and it is: Geordi La Forge and Mr. Scot's utterances hold more scienctific creedence in comparison), they are absolutely ingnorant of basic electrical laws and principles (Ohm's Law, the decibel). Variable line-out level control to compensate for the difference between a 3' and a 6' interconnect? The "loss" in the 6' cable must be on the order of <0.01 dB at audio frequencies.

While audiophools will wring their hands and lecture you about each small fraction of a dB, try pointing out to them that Bell's original (and still correct, I believe)

definition of one decibel is the minimum change that is detectable by someone with good hearing. Thus, spending several thousand dollars to realize less than 1 dB gain is a fraud. Too bad there isn't a written technical test required before you can walk into a high-end stereo shop. My answer to these nebbishes is to say: "Show me, on a spectrum analyzer!"

GEE - and *I* thought that actually LISTENING to one in REAL LIFE
situations was the ultimate test. It's certainly the way I bought
MINE - now I guess I'll have to read the technical specs to see if I
am REALLY hearing what I *thought* I've been hearing all this time -
be a SHAME if I have to junk my nice radio because a set of printed
specs NOW tell me it's no good...

That's as ludicrous as the "audio experts" on AM, who spend more time
LOOKING at your received signal on a scope than they do LISTENING to
what you are saying... "Eh, sorry OM, I missed most of your last
transmission because I was busy putting yer signals thru my scope and
spectrum analyzer - could you repeat?"

If one studies wave guide theory, the wave appears to have to travel faster
than the speed of light as it crosses back and forth in the wave guide as it
still comes out at the speed of light. Strange huh? Don't know what that has to
do with this gadget but thought somebody might want something to think about.

Subject: SPAMMER running a business?

Nc183d <nc183d@aol.com> wrote:
>I met Rich recently, and it is true, he is running a business.

Running a business? Dealers are asked to voluntarily reframe from posting business ads to the rec.radio NGs for the simple reason of preventing hundreds if not thousands of daily business-related commercial advertisements which would flood and distroy the usefulness of these *DISCUSSION* groups. Think of the number of electronics and radio dealers across the country who would love to advertise all their products and sales listings, but reframe from doing so out of respect of the established guidelines. We'd be literally buried in ads if they ignored the charters. Even our rec.radio.swap NG, the sales catch-all for the rec.radio.* hierarchy was created with the single-unit buyer/seller in mind; that group, too, would be distroyed if commercial dealers/businesses ignored the voted-on guidelines.

He might consider going through the established newsgroup-creation process and propose something like a biz.radio.sales newsgroup, outside of the rec (recreational) hierarchy. (If such a great were successfully created, it would probably end up being flooded by other dealers and businesses!)

Subject: WTB Collins 30L-1 any condition

I am looking for a Collins 30L-1 amp in any condition (almost). I'm looking for a project amp so I am not really looking for a pristine piece. It doesn't need to be working. On the other hand I don't want one that is water damaged, run over by a fork-truck, cannibalized, or has a burnt out transformer. Other than that, it might fit the bill. If you have such an amp you would be interested in selling, e-mail me with your price and condition / description of the amp.

Thanks

Hallicrafters HT-37 Transmitter For Sale...
Good cosmetic condition. All original knobs in good condition. Rig lights up, but has not been in use in several months. It was working when I brought it home. I just do not have the time or room to keep it. Included is a B & K 377 TR Switch that was wired to work with it. Manual copy. $195 plus shipping.

FS Drake 2A & Speaker/Qmultiplier This radio was DOA when I bought it aout a year ago...I repaired it gave it a complete alignment job...replaced a few tubes, etc comes with a manual instead of the 6X4 rect. tube it has diodes instead...rcvr looks great and it works like its supposed to...Q Multiplier with this rcvr is hard to beat..has notch filter and with a little talent you can achieve less than 100hz filtering on CW or if you just want to listen to the guys on AM...it has a wide 4.5khz filtering or 2.4khz for SSB...chassis has some discoloration on the copper but does not affect performance....$200 plus shipping

Most all plugs and jacks that depend on critical long term good connections are gold plated. Just look inside of your computer at the contacts on the plug in cards. "There's gold in them thar things" Some of the cheap cards that can be bought are not gold plated. They cause problems.

That is true, but the gold plating on the OUTSIDE of the connectors
doesn't do anything except please the eye...

Hi Bill

Isn't gold supposed to be applied over copper? Wonder why the component leads were not copper plated first? Maybe I am wrong on that.

Tin is not a good long term material for reliable connections. An accelerated example of that is a solder connection outside where it is exposed to rain and ultraviolet light. The connection will deteriorate very quickly. As your oven burn in showed, the tin corrodes. Good computer boards have gold plated contacts on them so that they maintain good long term contact.

I live in the South Florida coastal area so I know what you are talking about with corrosion problems. It is more severe here than any other place in the country that I know of. Several years ago I had some problems with some mobile antennas that were stainless steel with copper plating and then nickel plating over that. The antennas would turn green in the atmosphere here but no where else in the country would it show up. Turned out to be microscopic holes in the nickel plating allowing the corrosive atmosphere to get at the copper and causing it to bleed through. The fix was a heavier coating of nickel.

Gold shouldn't be plated right over copper. There should be something like an intermediate nickel plating layer.

I forget the chemical reason for this, but this is how PC board contact fingers and traces (as with older HP test equipment) are done.

Copper migrates through the gold and produces resistive corrosion
granules on the surface of the gold. The nickel coating seals the
copper, to prevent this.
Many good plating processes use nickel as a substrate for this
reason.

From: Heinz und Hannelore Breuer <hbreuer@debitel.net>
Message-ID: <390B28D1.6799@debitel.net>
Source record: 67359

Hi,

a few weeks ago I picked up a French made STABILIDYNE receiver (2-30 Mc) with separate power supply made by CSF (Companie Generale de Telegraphie sans Fils).
This receiver is a monster boatanchor made with 20 American 7-pin and 9-pin miniature tubes. Its olive paint tells me that it was probably used by the French military in its former live.

The receiver and power supply have a schematic inside the lid but I would appreciate to get a complete manual. The power supply is missing a ballast tube. The marking on the other tube is 25/75 V 0 A 4-433. Anybody has one of those? I also need the two connecting cables (or at least the strange round connectors) between the power supply and the receiver.

I appreciate any help to get this monster working again.

1387. Old Small Parts Still Disappearing

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-29 00:00:00 UTC
From: "David L. Stinson" <arc5@ix.netcom.com>
Message-ID: <390B54C5.C3D1A1BD@ix.netcom.com>
Source record: 67364

I just got back from the Belton, Texas hamfest. I'm concerned
about a trend that's been getting worse in recent years.
There is a near total lack of "dirty old boxes" full of dusty,
grundgy and useful old parts.

Used to be, you could find one or ten dirty old boxes full of
face plates, resistors, knobs, clipped-out doo-hickeys and
de-soldered thing-a-ma-bobs under every table.
Now, you rarely see more the two or three at the whole meet.
If you like to work on old radios, you found the "jewels"
you needed to finish your projects in these boxes.
The bits and pieces for restorations could almost always be found
if you got down there face-first in those dirty'ol boxes and dug.
This is becoming a serious drought as more and
more fellows move to "the other side of the grass"
and their kids throw the irreplaceable small parts in the trash.

Please, guys- Talk this up at your meetings.
Those small parts for restorations are getting impossible to obtain.
Please tell your kids to call somebody- anybody, to come
get "that old junk" rather then toss it in the dump.
And please, when they do call, take a little time to go
and get the stuff. You'll be a hero to guys who need
those doo-hickeys.

Kind Regards,
Dave S.

1390. FS: NICE Heathkit SB-310 SWL receiver with all filters

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-29 00:00:00 UTC
From: W4DAS <dcb@ecqual.net>
Message-ID: <390b597a@news-out.newsnerds.com>
Source record: 67367

Hello all,
I have a VERY nice SB-310 SWL receiver for sale. It covers 3.5 - 4.0, 5.7 - 6.2, 7.0 - 7.5, 9.5 - 10.0, 11.5 - 12.0, 14.0 - 14.5, 15.0 - 15.5, 17.5 - 18.0, and 26.9 - 27.4 MHz. It has the standard 5.0 KHz AM filter plus the optional SSB and CW filters. It works very well and looks great. Ths case on this radio is outstanding! I haven't found one scratch or chip. The worst fault I can find is someone apparently waxed the "HEATHKIT" badge just above the main tuning knob and it is somewhat scratched. Check out the photos at the links below. A prior owner put his drivers license number and SSN on the back of the chassis but this is out of sight. This is a good looking, working example of the hard to find SB series SWL receiver. I also will include the original Heathkit manual. Asking $300 plus shipping from Stuart, Florida 34996. I can accept credit cards through Paypal. I would possibly consider trades for working SB series stuff.

--> Actually, in my experience as long as the connectors are connected, it
doesn't matter a whole lot what they're plated with -- the spring contact
keeps them from corroding. Gold does make a difference while they're
sitting around unconnected, though.

What *does* cause a big problem is if you connect something that's
gold-plated to something that isn't. This can set up galvanic corrosion.
(Hence the suggestion you'll often see that SIMMs with tin-plated contacts
should be used in tin-plated SIMM slots, and ones with gold-plated contacts
should be used in gold-plated slots.)

Cleaning out wire box today, and found the Kenwood plug
that fits the T599x transmitter. Think it's wired to go
to external keyer. See photo ...

http://albums.photopoint.com/j/AlbumIndex?u=215507&a=1736762

It's probably one of those plugs that's hard to find in
today's market. Anybody interested in making an offer for it?

1402. amplifier relay - TS-850 to 30L-1

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-29 00:00:00 UTC
From: Jeff Kilgore <kilgore@dev.tivoli.com>
Message-ID: <390B7ACB.978A6A80@dev.tivoli.com>
Source record: 67379
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I need an interface to key a Collins 30L-1 amplifier with a Kenwood TS-850 to avoid stressing and possibly destroying the relay in the TS-850. I know I have seen such a circuit before, but I can't seem to find it right now.

Does anyone have the schematic or a description of a suitable circuit? One that can be put together with parts from the local Radio Shack would be a plus, as I could get it going tomorrow.

Thanks and 73,
Jeff, KC1MK

1403. Re: AudioPhiles Push the Envelope

if you attend a live concert, it is often the case that what you listen to is electronically reproduced sound through inferior quality "professional" speakers.

Sencond, it is not true that all persons who choose to spend $$ on stereo are naieve about electronics -in fact that statement is just plain false. just because a minimum wage sales clerk at some consumer store tells you some nonsense don't jump to the conclusion that all high end audio persons would be taken in by such nonsense. If you want to get some idea of the types of discussions, hang out at rec.audio.high-end for a while - you will see both kinds - the persons who swear that painting the edges of their CDs with special green markers makes them sound better, and persons who really understand the intricacies of D/A conversions, circuit design and so on.

to be fair, spending "too much" money on a stereo is really no different than spending "too much" money on an old radio (or several old radios) - in both cases it is a personal choice.

Re a $10K stereo - you can very easily spend 30K on a stereo - just like you can spend anywhere from $50 to $500,000 for a car (beater to new super ferrari or rolls). For the extra money you get some fancy front panels, sure, but you also get better sound. like most things, you are on an exponential curve (1-e^-x) so each additional $ spend buys less total improvement. But anyone will easily hear the difference between a $500 system and a $20,000 system. many will say that it's not worth it - fair enough - some think it is worth it - also fair enough.

And, in constant dollars, what did that really nice Scott receiver with the two chrome chassis cost? it was built just before WWII - if I remember right - and it was not cheap - (anyone know what they sold for?) - when you find out, for comparison, my 1938 plymouth sold for $646. my 1936 cadillac was closer to $6000. I'll bet the Scott cost almost as much as my plymouth. And what was a year's wage for a factory man at that time? I believe you will see that the Scott was the then equivalent of today's high end audio - someone who knows chime in with some real data (and if I picked the wrong receiver, help me out here).

Running a business? Dealers are asked to voluntarily reframe from posting business ads to the rec.radio NGs for the simple reason of preventing hundreds if not thousands of daily business-related commercial advertisements which would flood and distroy the usefulness of these *DISCUSSION* groups. Think of the number of electronics and radio dealers across the country who would love to advertise all their products and sales listings, but reframe from doing so out of respect of the established guidelines. We'd be literally buried in ads if they ignored the charters. Even our rec.radio.swap NG, the sales catch-all for the rec.radio.* hierarchy was created with the single-unit buyer/seller in mind; that group, too, would be distroyed if commercial dealers/businesses ignored the voted-on guidelines.

He might consider going through the established newsgroup-creation process and propose something like a biz.radio.sales newsgroup, outside of the rec (recreational) hierarchy. (If such a great were successfully created, it would probably end up being flooded by other dealers and businesses!)

Gold is good. It does not corrode and cause poor connections like other metals do when they have been in service for a few years. I have some gold plated connectors and some that aren't. The ones that are not, develop poor connections over time and cause a very noticeable lack of low frequency coupling. (like it sounds terrible) Wiggle the connector a bit and it works ok again for awhile. No problem with the gold connectors.

As far as interconnect cables go, it does make a difference in the sound with different types of cable. I suspect that the difference is due to the amount of capacitance the interconnect presents more than anything else. Not saying it is better or worse, but different. Oxygen free, silver plated or platinum plated wire, I am not convinced that one matters. Or $500 cables.

If one studies wave guide theory, the wave appears to have to travel faster
than the speed of light as it crosses back and forth in the wave guide as it
still comes out at the speed of light. Strange huh? Don't know what that has to
do with this gadget but thought somebody might want something to think about.

This is my final answer: If you spend more than $2500 for your entire stereo, your money would be better spent attending live concerts every night of the week. Oh, I suppose some will object that a $10K stereo sounds better than live, but then those same poepl have to surrender their gobbledy-gook about refence-this and authentic-that, won't they?

The amazing thing I did not realize about the "audiophile" market before I became a ham is that for all the mumbo-jumbo (and it is: Geordi La Forge and Mr. Scot's utterances hold more scienctific creedence in comparison), they are absolutely ingnorant of basic electrical laws and principles (Ohm's Law, the decibel). Variable line-out level control to compensate for the difference between a 3' and a 6' interconnect? The "loss" in the 6' cable must be on the order of <0.01 dB at audio frequencies.

While audiophools will wring their hands and lecture you about each small fraction of a dB, try pointing out to them that Bell's original (and still correct, I believe) definition of one decibel is the minimum change that is detectable by someone with good hearing. Thus, spending several thousand dollars to realize less than 1 dB gain is a fraud. Too bad there isn't a written technical test required before you can walk into a high-end stereo shop. My answer to these nebbishes is to say: "Show me, on a spectrum analyzer!"

For Sale,

Tempo One vintage HF transceiver and power supply.

Later model with black face.

Covers 80, 40, 20, 15 meters and the 28.5 to 29.0 part of the 10 meter band.

Requires optional crystals for complete 10 meter coverage.

Very good condition and fully working.

Output tubes are very strong and easily produce rated power.

Comes with original manual and power supply / speaker.

$180 US plus shipping.

Please reply to csc@smartt.com if interested.

Colin

Ah, he says.

let's try this in constant buying power - I like the zeneith example - that was about 20% more than my plymouth - so what does a plymouth cost today? (you know, cars are cars, right?) - I suppose about 17 to 20 grand? if that's about right, then the zeneith strat was comparable in $$$ to the mid range of today's high end audio. Now, I wonder - did audiophiles have "tweeks" for better sound then? I know there were those special needles made of cactus spines - what other items (the sillier the better) graced the high end scene in the late 30s?

Actually, despite rumors to the contrary, no. No reproduced sound will ever sound LIVE to a trained ear. Microphone choice, preamp design, cable and connector choices all have influence on the recorded sound, as do the modules of the mixing consoles, and the recorders used in the process.

Further, multiple miking techniques are as far from the 'authentic' experience as you can get, since the authentic experience is biphonic from the 1st row or back. Stereo is a different sonic experience, and also by its nature, and the production process, not authentic either.

There are a few recordings that are authentic, and accurate, using two linear microphones, spaced about the width of a human head, with a dummy head between them, plugged without eq, or limiting directly into a recorder of extreme linearity. These produce authentic listening experiences, but only through very high end systems, also without any trace of processing and only through headphones, because of the interaural cross talk of the hearing process, and the interaction of the listening room.

These recordings are low in number, and do not sell particularly well.

Systems used to reproduce them do not reproduce most other commercial recordings well, so such reproduction equipment is also comparatively rare.

Meaning in the final analysis that authentic reproduction is not the goal. Only an interesting academic curiosity.

There are lots of solid state inverters out there that are quiter and more reliable than motor generators. Do you need a sine wave? Stepped wave inverters are more efficient. How about zero-load input current draw? Some solid state units will draw very little if you shut off the load, motor generators can still draw significant current.

HP LaserJet 3150 Users... Can You Print Landscape???
&
Try it...

&
OK, neither can I - and neither can a whole lot of other users either.
So far I've identified several here in Usenet, but I'm sure there are
many, many more.
&
I'm attempting to identify as many people as possible with this problem,
so we can approach HP as a group and hopefully get them of their asses and
give us an appropriate firmware revision.
&
The workaround they currently recommend is completely unacceptable, since
it requires you to lower your video graphics acceleration significantly.
This degrades the video capabilities of your entire machine!
&
I don't think so...
&
Please write me at: fairnews@mailandnews.com if you are having
this problem so we can approach HP as a group and hopefully motivate/shame
them into fixing this.
&
I hope to heard from you.
&
Sincerely,
&
Charles Hamilton

From: Jeff Kilgore
Subject: amplifier relay - TS-850 to 30L-1

I need an interface to key a Collins 30L-1 amplifier with a Kenwood
TS-850 to avoid stressing and possibly destroying the relay in the
TS-850. I know I have seen such a circuit before, but I can't seem
to find it right now.

Does anyone have the schematic or a description of a suitable
circuit? One that can be put together with parts from the local
Radio Shack would be a plus, as I could get it going tomorrow.

Thanks and 73,
Jeff, KC1MK

Subject: AudioPhiles Push the Envelope

Most all plugs and jacks that depend on critical long term good connections are gold plated. Just look inside of your computer at the contacts on the plug in cards. "There's gold in them thar things" Some of the cheap cards that can be bought are not gold plated. They cause problems.

That is true, but the gold plating on the OUTSIDE of the connectors
doesn't do anything except please the eye...

Copper migrates through the gold and produces resistive corrosion
granules on the surface of the gold. The nickel coating seals the
copper, to prevent this.
Many good plating processes use nickel as a substrate for this
reason.

Hi Bill

Isn't gold supposed to be applied over copper? Wonder why the component leads were not copper plated first? Maybe I am wrong on that.

Tin is not a good long term material for reliable connections. An accelerated example of that is a solder connection outside where it is exposed to rain and ultraviolet light. The connection will deteriorate very quickly. As your oven burn in showed, the tin corrodes. Good computer boards have gold plated contacts on them so that they maintain good long term contact.

I live in the South Florida coastal area so I know what you are talking about with corrosion problems. It is more severe here than any other place in the country that I know of. Several years ago I had some problems with some mobile antennas that were stainless steel with copper plating and then nickel plating over that. The antennas would turn green in the atmosphere here but no where else in the country would it show up. Turned out to be microscopic holes in the nickel plating allowing the corrosive atmosphere to get at the copper and causing it to bleed through. The fix was a heavier coating of nickel.

Gold shouldn't be plated right over copper. There should be something like
an intermediate nickel plating layer.

I forget the chemical reason for this, but this is how PC board contact
fingers and traces (as with older HP test equipment) are done.

--> Actually, in my experience as long as the connectors are connected, it
doesn't matter a whole lot what they're plated with -- the spring contact
keeps them from corroding. Gold does make a difference while they're
sitting around unconnected, though.

What *does* cause a big problem is if you connect something that's
gold-plated to something that isn't. This can set up galvanic corrosion.
(Hence the suggestion you'll often see that SIMMs with tin-plated contacts
should be used in tin-plated SIMM slots, and ones with gold-plated contacts
should be used in gold-plated slots.)

David

You are right about the dissimilar metals on contacts causing problems. You will find gold on almost all military and industrial connectors in any equipment that is of critical nature that depends on maintaining good connections. Just because a connector is connected will not stop it from corroding. The parts near the actual connection will start first and creep in toward the connection. If corrosion were only a problem while sitting around not connected, companies like HP, Tektronics and others would not gold plate the connectors inside of their equipment. Gold is expensive. It adds cost to all connectors. For units in storage and not plugged in, they would get coated with a protective film until used.

From: "Bill Noble"
Subject: AudioPhiles Push the Envelope

if you attend a live concert, it is often the case that what
you listen to is electronically reproduced sound through
inferior quality "professional" speakers.

Sencond, it is not true that all persons who choose to spend
$$ on stereo are naieve about electronics -in fact that
statement is just plain false. just because a minimum wage

sales clerk at some consumer store tells you some nonsense don't jump to the conclusion that all high end audio persons would be taken in by such nonsense. If you want to get some idea of the types of discussions, hang out at rec.audio.high-end for a while - you will see both kinds - the persons who swear that painting the edges of their CDs with special green markers makes them sound better, and persons who really understand the intricacies of D/A conversions, circuit design and so on.

to be fair, spending "too much" money on a stereo is really no different than spending "too much" money on an old radio (or several old radios) - in both cases it is a personal choice.

Re a $10K stereo - you can very easily spend 30K on a stereo - just like you can spend anywhere from $50 to $500,000 for a car (beater to new super ferrari or rolls). For the extra money you get some fancy front panels, sure, but you also get better sound. like most things, you are on an exponential curve (1-e^-x) so each additional $ spend buys less total improvement. But anyone will easily hear the difference between a $500 system and a $20,000 system. many will say that it's not worth it - fair enough - some think it is worth it - also fair enough.

And, in constant dollars, what did that really nice Scott receiver with the two chrome chassis cost? it was built just before WWII - if I remember right - and it was not cheap - (anyone know what they sold for?) - when you find out, for comparison, my 1938 plymouth sold for $646. my 1936 cadillac was closer to $6000. I'll bet the Scott cost almost as much as my plymouth. And what was a year's wage for a factory man at that time? I believe you will see that the Scott was the then equivalent of today's high end audio - someone who knows chime in with some real data (and if I picked the wrong receiver, help me out here).

Hi Bill

I do not know about the prices of some of the old Scott equipment etc. I tend to think you are in the ball park on it though. As for today's prices, yes higher dollars do buy you better equipment.

Yes it is very easy to tell the difference in good high end equipment compared to the mid-fi equipment. $2500 will buy a fair sounding system but from that go and listen to a $20,000 system in a high end store. Not too hard for anyone to tell the difference. If any of you out there has a chance to go to the CES show in Chicago where all of the high end hi-fi stuff is, it is well worth the experience. Yes there are a bunch of nut cases running around there but there are a lot of very good sound systems on display. Just set and listen to some for awhile. On some of the really good ones you would swear the music was live if you did not see it wasn't.

Spending a lot of money on a sound system doesn't automatically qualify or disqualify anyone from knowing what they are talking about. Having a ham license doesn't automatically qualify anyone as an electronics expert and knowing all about what is and is not good audio equipment either. There are some very sharp audio buffs out there as well as some very naive ones too. I think some of the hams fall into both of those categories also. Yes there is a lot of BS in the audio business but there is also a lot of very good sound out there for a lot of reasons other than some of the hype.

You are also right about the sound at some concerts. I have been at some where it was so bad I couldn't wait to get out of there. It was not the artist but the sound system was poor. It is a joy to hear a concert with no electronics involved. But when recordings are made usually much more attention is paid to the quality of the equipment that is used and how it is set up and operated to do the recording than the equipment that is used live. For a live concert usually the main concern is to be loud.

It is not too hard to obtain a sound system for home use that has much
better sound than a lot of the live concert stuff.

Actually, despite rumors to the contrary, no. No reproduced sound
will ever sound LIVE to a trained ear. Microphone choice, preamp

design, cable and connector choices all have influence on the
recorded sound, as do the modules of the mixing consoles, and the
recorders used in the process.

Further, multiple miking techniques are as far from the
'authentic' experience as you can get, since the authentic
experience is biphonic from the 1st row or back. Stereo is a
different sonic experience, and also by its nature, and the
production process, not authentic either.

There are a few recordings that are authentic, and accurate, using
two linear microphones, spaced about the width of a human head, with
a dummy head between them, plugged without eq, or limiting directly
into a recorder of extreme linearity. These produce authentic
listening experiences, but only through very high end systems, also
without any trace of processing and only through headphones, because
of the interaural cross talk of the hearing process, and the
interaction of the listening room.

These recordings are low in number, and do not sell particularly
well.

Systems used to reproduce them do not reproduce most other
commercial recordings well, so such reproduction equipment is also
comparatively rare.

Meaning in the final analysis that authentic reproduction is not
the goal. Only an interesting academic curiosity.

From: "W4DAS"
Subject: FS: NICE Heathkit SB-310 SWL receiver with all filters

Hello all,
I have a VERY nice SB-310 SWL receiver for sale. It covers 3.5 - 4.0,
5.7 - 6.2, 7.0 - 7.5, 9.5 - 10.0, 11.5 - 12.0, 14.0 - 14.5, 15.0 - 15.5,
17.5 - 18.0, and 26.9 - 27.4 MHz. It has the standard 5.0 KHz AM filter
plus the optional SSB and CW filters. It works very well and looks great.
Ths case on this radio is outstanding! I haven't found one scratch or chip.
The worst fault I can find is someone apparently waxed the "HEATHKIT" badge
just above the main tuning knob and it is somewhat scratched. Check out the
photos at the links below. A prior owner put his drivers license number and
SSN on the back of the chassis but this is out of sight. This is a good
looking, working example of the hard to find SB series SWL receiver. I also
will include the original Heathkit manual. Asking $300 plus shipping from
Stuart, Florida 34996. I can accept credit cards through Paypal. I would
possibly consider trades for working SB series stuff.

Subject: Info needed: Stabilidyne Receiver made by CSF

Hi,

a few weeks ago I picked up a French made STABILIDYNE receiver (2-30 Mc)
with separate power supply made by CSF (Companie Generale de Telegraphie

sans Fils).
This receiver is a monster boatanchor made with 20 American 7-pin and
9-pin miniature tubes. Its olive paint tells me that it was probably
used by the French military in its former live.

The receiver and power supply have a schematic inside the lid but I
would appreciate to get a complete manual. The power supply is missing a
ballast tube. The marking on the other tube is 25/75 V 0 A 4-433.
Anybody has one of those? I also need the two connecting cables (or at
least the strange round connectors) between the power supply and the
receiver.

I appreciate any help to get this monster working again.

Subject: Old Small Parts Still Disappearing

I just got back from the Belton, Texas hamfest. I'm concerned
about a trend that's been getting worse in recent years.
There is a near total lack of "dirty old boxes" full of dusty,
grundgy and useful old parts.

Used to be, you could find one or ten dirty old boxes full of
face plates, resistors, knobs, clipped-out doo-hickeys and
de-soldered thing-a-ma-bobs under every table.
Now, you rarely see more the two or three at the whole meet.
If you like to work on old radios, you found the "jewels"
you needed to finish your projects in these boxes.
The bits and pieces for restorations could almost always be found
if you got down there face-first in those dirty'ol boxes and dug.
This is becoming a serious drought as more and
more fellows move to "the other side of the grass"
and their kids throw the irreplaceable small parts in the trash.

Please, guys- Talk this up at your meetings.
Those small parts for restorations are getting impossible to obtain.
Please tell your kids to call somebody- anybody, to come
get "that old junk" rather then toss it in the dump.
And please, when they do call, take a little time to go
and get the stuff. You'll be a hero to guys who need
those doo-hickeys.

Kind Regards,
Dave S.

Subject: TS-520S - IS $265 a good offer?

Tony,
If the TS-520 is clean cosmetically and in good condition electrically (
final tubes have good emission ie: 80 watts out on 10 meters, 90-100 out on the
other bands) it's a fair buy.
The Kenwood TS-520 was a real good reliable rig. For $265.00 you should get
many qso's out of it if it's properly taken care of.
Good luck and 73.

From: "Peter Gottlieb"
Subject: WTB:Motor Generator

There are lots of solid state inverters out there that are quiter and more
reliable than motor generators. Do you need a sine wave? Stepped wave
inverters are more efficient. How about zero-load input current draw? Some
solid state units will draw very little if you shut off the load, motor
generators can still draw significant current.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-30 00:00:00 UTC
From: jonweiner@aol.com
Message-ID: <20000430102335.22337.00001201@ng-md1.aol.com>
Source record: 67310

Complete HRO-50T1 setup. Consists of the HRO-50T1 (that's the table top cabinet model) with the A,B,C & D coil sets, three tier coil storage rack and matching speaker. The receiver is in good conditoin and working. Cabinets and inside need a good cleaning and probably a bit of touch up. The PW main tuning knob need adjustment for the numbers to index properly. All knobs are correct. No manual. Also included is an unmarked AC coil set for 15 meters. Price $350., picked up at Greenville, SC or plus shipping.

Jon

I, too am very interested. Have SB-100 (I built in '64 when I was 14) and
have been watching for 6 and 2 meter add-ons.

Please let me know asking price, when they were last successfully used, etc.
Thanks!!

Subject: Drake stuff as is.....cheap too....

Hi people, I have a Drake T4X and R4 that would make nice parts radios for the rest of your Drake arsenal. They are complete...as for working, some elbow grease would get them going. The one thing cosmetically that is annoying is that the original owner had the presence of mind the awl his callsign into the front panels of both units. I will take $200 for both, plus shipping The e-mail address is jerryb@greenapple.com. Thanks.

From: radiomatt@aol.com (Radiomatt)
Subject: FR: RACAL dual speaker (19" rackmount)

This is the MA6721 dual speaker made by Racal. I bought it new, but never
installed it ...it has been on a shelf all this time. Has two separate speakers
behind metal grills in a RACAL 6217 type of beige color rack panel. Each
speaker is shield by a metal box, and each has its own on-off switch.
Connectors look like DB-9.
I sold one on EBay awhile back for over $100+ shipping.
I'll sell this for $110 shipped Priority Mail in US. EMail only please.
There's a picture at:
<http://albums.photopoint.com/j/ViewPhoto?u=453256&a=3357147&p=18590405>

Please note that the four RA6217s in the photo are not included nor are they
for sale! The speaker is placed in an opening left by a fifth RA6217 which I
moved to another equipment rack.

From: 04worley@snowhill.com
Subject: FS: APS-104 radar modulator

I have a mil surplus modulator unit from APS-104 search radar (likely
from B-52 bomber - 1960s vintage). Was used to fire a large pulse

magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. NOTE: Please REMOVE the "04" to reply or call 334-347-5281 day/eve.

From: "Joe" <joeamp@mindspring.com>
Subject: How To Test a 3CX3000A7?

Is that a triode, I forgot
Call Mayer Guileani and ask him to put you in touch with Attica prison in
New York to test the chair.
Run the heater off a motorcycle battery
Store 200V for the grid on several 500 Mfd cap's quickly apply and throw the
chair switch
If it takes out the electric panel consider to have good conductivity.

Dont get killed !!

Subject: HQ-170/180 feducial needed

Does anyone have a Hammarlund HQ-170/180 adjustable feducial they could sell? This is the clear plastic window with the vertical hairline, on the right side of the receiver, which is driven by the small black knob called "dial calibration" in the manual. I'm restoring an HQ-180 for a friend and the window on his radio is badly scratched. I could also use an S-meter and clock cover if someone has any extras.

Thanks,

73, Ed

It does not matter what we as HAMS want or think. What controls the
direction is the radio manufactures. Icom, Yaesu, Kenwood know that
they will sell more if people are not burdened with learning the code.

You will see code removed from the requirments within 5 years, if not
you will see fewer and fewer new radios designs. When was the last time
that YOU bought a 3000.00 rig?

Myself, I think that code has its place. You can cut through a lot of
interferance that voice will not. Allthough with the invent of the
Internet, a person can do the same with a lot less headache.

HF is a pain. You have to know what bands, how to tune an antenna, how
to tune a amp. If you dont have anyone to show you it can be a
expencive hobbie.

When was the last time YOU took a novice or tech into your home to show
him how to talk HF? 5 or 10 people a year is a drop in the bucket.

Do you even have a place in your town that you can go in and BUY a HF
rig? Yet how many computer stores do you see?

Why do you think that WalMart is not selling HF rigs?

just my 2 cents, dont flame cause I just dont care anymore.

Joe,
I guess those who have Honda's are less of a motorcyclist too, using your
reasoning.
I held a novice license in the late 70's but only being able to use cw got
boring thus losing interest in the hobby.

Was happier with my Ranger and Thunderbolt on 11 meters but no i have an interest again due to the lowering of code requirements. Its my opinion it will help the hobby, heck I learned to drive on a standard transmission again using your reasoning drivers today with automatics are wimps and not to be respected. 73.....Dale

Ever hear of a "filter"? Does your browser lack a "skip" key? Are you the sort who MUST sit in front of the boob tube helplessly for hours on end, cuz you FORGOT how to turn the set off? If you answered correctly all the above, YOU would qualify for the "instant Extra Class" license... Don't fret, LOTS of your friends will be there on the bands too...

What a maroon....

Well, not exactly, but OTOH cars with manual transmissions *are* demonstrably more
under the control of the driver, whatever his skills are. A good driver has more
control of a car with a manual transmission, but a poor driver also is more likely
to lose control of one. WHat that has to do with CW and ham licenses, I am not
sure. . . _ . _

For the same reason that they do not sell 8" reflector telecopes,
mandolins, rice-paper kites, or any CDs with the "F" word on them: they
only sell what the consumer-mass wants. If at least 50 million Amaricans
don't want one, you won't find it at Wal-Mart.

Subject: SX 115 Value?

> Whats an SX 115 worth?

I'd estimate current "market" (not E-Bay) value at $600-800 (speaker &
manual affecting $$). I paid about $600 (it was part of a complete
station) for mine (in about 8-9 condx) three years ago. Saw one at a
local swap about 5-6 years ago for $600. This is the second most
valuable Halli after the SX-88 (those at $1200-1500 "market" value).
The '115 is a good RX, sold my 75A4 after getting mine. Lots of folks

in the Halli collecting community will be eager to buy yours, there weren't that many made. Enough demand so that you can probably stick with a pick-up buyer (I drove about 750 miles to get mine), saving the risk/hassle of shipping.

An E.H. Scott Imperial Allwave 23 chassis set complete with 12-inch Magnavox speaker sold for a little over $200 in 1936. This was their top of the line set with four 2A3s in P-P parallel for about 35 watts of audio. A nice cabinet could be added for about $25. This made the Allwave 23 somewhat of a bargain compared to many other top-priced sets of the era such as the Zenith 1000Z Strat at $750. You could have bought three Scotts for the price of the Zenith.

Source record: 67325

Gents,

I have a ME-165/G Military surplus watt/SWR meter that I'm looking for info on.

It was made by Bruno- New York under military contract. It will read RF wattage and SWR
and has a built-in dummy load.

The thing is massive, and my first question has to do with the dummy load. It appears to have
approximately ten 50 watt 600 ohm resistors in it. Does this mean that is can dissipate 500 watts
safely? The only clue that I can see is a caution plate that advises intermittent operation when above
250 watts.

The operation of the wattmeter and swr bridge seems pretty straight forward, and I really like
that when in the SWR mode, the transmitter is shunted into the dummy load. This means that the
rig always sees a 1:1 ratio regardless of the actual SWR... Neat!

My second question kind of depends on the answer to the first. I'm thinking that if I supply forced
air around the resistors in the load, that I can safely increase to power rating of the dummy load.
I need enough to take the output of my TL-922; about 1kw. Does this seem feasible?

Thanks for your input... If there is another newsgroup that might serve better, please let me know

>number 119-61-35 on it,can someone identify it

According to my S-108 manual, the Hallicrafters service part numbers on the IF transformers are as follows:
Transformer, 1st and 2nd IF (T1,T2) 050-300243
Transformer, IF, detector stage 050-300242

I don't see any parts on the list which begin with 119.

There's obviously a different numbering scheme on the part you're trying to locate.

Hello!!
I have a web page dedicated to the radio hobby here in Tampa Bay
Florida. I am in the process of launching a new audio chat network on a
channel for amateur radio enthusiasts. The idea is for webmasters to put the
small html code somwhere on their amateur radio web page which would be
linked all together worldwide. The system utilizes the new HearMe plugin
which is a small 80k or so program new visitors of the amateur radio audio
chat would download upon landing on the page which has the html code for the
plugin. Please let me know if you decide to use the system so I can add your
site to my links page to let others know your site is connected to the
network. For a demonstration of the system you may email me for a time and
date so you can see it in action. To get the html code please visit my web
site below. To get further info on the HearMe requirments to have it work
click on the help are for Hear Me on my web site. I am in no way affiliated
with HearMe and my web site is a noncomercial page.You may also visit my
radio page at the url below from 7pm to 8pm eastern time every day I try to
be in my scanner audio chat at that time. I look forward to hearing from.
Thankyou
Best Regards

1470. Hamfest find: Halli SX-110

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-04-30 00:00:00 UTC
From: cartercook@aol.com
Message-ID: <20000430175453.25485.00000640@ng-df1.aol.com>
Source record: 67334

At a hamfest this weekend, I bought a clean Hallicrafters SX-110 complete with a nice R-48 speaker. Cosmetically, both units were in very nice condition. Some recent owner had painted the case of the '110 a much too light shade of gray, but that was easily remedied.

When I removed the chassis I found that the radio had been neatly recapped and had a number of resistors replaced. I first gave it a quick test on AM and SW broadcast and found that it seemed amply sensitive and sounded well. Then I switched in the BFO for some listening around the ham bands. A loud roar/screech greeted this effort. After a bit of knob twiddling and consultation with the manual, it was apparent that there was a serious problem somewhere in the BFO or second IF amp.

I looked carefully at the suspected circuits. The grid of the BFO - half of a 6SC7- is connected with the grid of the second IF amp (6SK7) by a shielded cable in series with a gimmick capacitor. The gimmick is made by twisting together the end of the insulated inner conductor of the shielded cable a turn or so around the insulated lead of the 2nd IF amp grid lead.

Sure enough, some previous owner had soldered the inner conductor directly to the IF amp grid lead. No gimmick capacitor, no correct BFO injection. After correcting the error and readjusting the pitch control inductor slug - which had been moved out of adjustment in a probable attempt to correct the BFO problem- the '110 is working fine. I'm enjoying it.

Hello all, thanks for reading.

I have a few Gonset items for sale.
I can send digital e-mail pictures to serious inquiries for any
of the items. Offers or trades considered.

I have a set of Gonset mobile twins for sale

G-66B with dual power supply/speaker
G 77A with power supply/modulator
Manuals and interconnect cables included.
Price is $ 200 shipped with in US 48 states.

Both are operational and have been used to work stations on 3885.

Physically the panels are clean . The (all correct) knobs
have dulled a little over time. The cabinets have marks from
being mobile and should be painted.

G-76 transceiver with matching AC power supply. This radio is
operational.
The trim ring has flaking paint as many have. Both the cabinet
and trim ring needs repainting. The panel is clean. Knobs are
correct. Price $225 shipped.

---

6 meter Communicator II, working as normal. (with a few
crystals)
Physical condition is good. There are some cabinet scratches and
scuffs. One small blue knob is missing $50 plus shipping. .

David

You are right about the dissimilar metals on contacts causing problems. You will find gold on almost all military and industrial connectors in any equipment that is of critical nature that depends on maintaining good connections. Just because a connector is connected will not stop it from corroding. The parts near the actual connection will start first and creep in toward the connection. If corrosion were only a problem while sitting around not connected, companies like HP, Tektronics and others would not gold plate the connectors inside of their equipment. Gold is expensive. It adds cost to all connectors. For units in storage and not plugged in, they would get coated with a protective film until used.

Tony,
If the TS-520 is clean cosmetically and in good condition electrically (
final tubes have good emission ie: 80 watts out on 10 meters, 90-100 out on the
other bands) it's a fair buy.
The Kenwood TS-520 was a real good reliable rig. For $265.00 you should get
many qso's out of it if it's properly taken care of.
Good luck and 73.

I'll keep an eye out for such a beast for ya.....can't help wondering though why you wouldn't run that 120vac 1kva alternator off of the prime mover (engine) that would be required to run the substantial generator/alternator required to keep the battery bank charged....as you drew 90+ amperes from it at 1000va output. Sometimes we don't see the whole picture in a news post though so I'll take your word on the requirements as such.

Hi Bill

I do not know about the prices of some of the old Scott equipment etc. I tend to think you are in the ball park on it though. As for today's prices, yes higher dollars do buy you better equipment.

Yes it is very easy to tell the difference in good high end equipment compared to the mid-fi equipment. $2500 will buy a fair sounding system but from that go and listen to a $20,000 system in a high end store. Not too hard for anyone to tell the difference. If any of you out there has a chance to go to the CES show in Chicago where all of the high end hi-fi stuff is, it is well worth the experience. Yes there are a bunch of nut cases running around there but there are a lot of very good sound systems on display. Just set and listen to some for awhile. On some of the really good ones you would swear the music was live if you did not see it wasn't.

Spending a lot of money on a sound system doesn't automatically qualify or disqualify anyone from knowing what they are talking about. Having a ham license doesn't automatically qualify anyone as an electronics expert and knowing all about what is and is not good audio equipment either. There are some very sharp audio buffs out there as well as some very naive ones too. I think some of the hams fall into both of those categories also. Yes there is a lot of BS in the audio business but there is also a lot of very good sound out there for a lot of reasons other than some of the hype.

You are also right about the sound at some concerts. I have been at some where it was so bad I couldn't wait to get out of there. It was not the artist but the sound system was poor. It is a joy to hear a concert with no electronics involved. But when recordings are made usually much more attention is paid to the quality of the equipment that is used and how it is set up and operated to do the recording than the equipment that is used live. For a live concert usually the main concern is to be loud. It is not too hard to obtain a sound system for home use that has much better sound than a lot of the live concert stuff.

Hello All,

Local Little League program needs to revamp the PA SYSTEM. I need 2 PUSH TO TALK DESK MIKES. (D104 - Turner - Whatever) They have been using normal on/off switch type mikes and wore them out (plus the dads who are announcing the games sometimes forget to turn the mike off and comments that should not have been heard were !!!!) Push to talk should help this out. Please let me know what you have. the Little League Organization is on a limited budget.

Thanks,

Russ ----- W8RHJ

Subject: "Trio" 9R-4 receiver history?

Ah, thanks, Mr. Hanazawa! That is a lot of good information. I have also today gotten E-mail from Mr. Okada who also recommends your Web page. I am now alerted to look for a Kasuga 6R-4. This is of historical interest, I think, as the original item of "Kenwood" equipment.

Regards,

Cortland Richmond

From: Gary Schnabl <badBadger@badBadger.com>
Subject: BC-312 / BC-348 - still in use?

In 1957 when I became a ham, I bought a Belmont BC-348-R for $35.Worked hundreds of countries on CW with it and later did the same on SSB. However, when I was the chief engineer of a 10 KW AM daytimer, I used its towers at night, along with a homebrew 5 KW "ham" rig with my own power divider/phasers and worked all over the world on 75/80 meters. I still used

the BC-348 then, even though I also had better receivers.

Subject: BC-312 / BC-348 - still in use?

I still use a 348-R on AM and CW as well as general listening. Got the original dynamotor as well.

Lovely rigs...goes well with my R390-A and the RACAL RA117

Subject: How To Test a 3CX3000A7?

This is an easy question to answer, Do you want to use this tube for yourself or do you want to sell it off for a profit? If you want to use the tube yourself, build the amplifier deck and supply to support it and when its done insert tube and test it, its that simple. If you want to sell it, thats easy too, Bring it to e-bay, and write up this ad..."Hi, I know nothing about the jabroni tube, its a big fat son of a bitch, and I'll bet it can handle some real big power (probibly as much as at least 100 pills or more) I am not a ham, so I have no way of testing this thing, Due to the nature of this item I can not guarentee it so PLEASE BID ACCORDINGLY, all sales are FINAL (pun intended)....Set a reserve at $500.00 and let the parannahs go at it!! You'll be surprised trust me! Now, do you really need to test that tube?
Nope......Good luck

Subject: National HRO - Information

Does anyone out there have any original design information on the National HRO series?

The various models Senior Junior Rack table etc etc have all been well covered before as have PSUs etc.

Who has any real information about coupling factors of IF tuned circuits
and the design of the coil sets for various bands??

Would like to do some onward development.

A discussion group of worthy(!!) HRO modifications also of interest.

Please no offers sale trade etc. More than enough already.

From: <wb0poz@prodigy.net>
Subject: TS940S Rx Problem

Not a PLL problem, it's most likely a problem with the preselector filter
selector circuit. The preselector range is selected by DC bias applied to
cheapass diodes (hence the horrible 3rd order intercept on these radios)
which select the signal path to the appropriate bandpass filter. Bet the
radio got hit by lightning and fried the decoder circuit. You *need* a
schematic to get to the bottom of this. Once you find the input to the
first mixer, you can bypass all the preselectors and I'll bet you get
signals (LOTS of signals) on all bands, thereby verifying that the problem
is the afore-mentioned circuit.

Good luck - you'll need it! Remember on these cheapo radios you get ONE
chance at replacing components on the board before the foil starts lifting.
BE CAREFUL. 73 - John

Thanks for taking the trouble to read this.
I am trying to get the pinouts for the two mini jack plugs on the Icom HS51 Headset.
(I am trying to adapt it to work with my Icom ICW2E.)
Cheerio from John. G0RDO.

Went to see it. Pretty good flick. Basically non-ham finds his fathers ham radio and plugs it in and tunes 15 Meters. His first contact is his Ham Radio dad W2QVR who died thirty years ago.

Funny that call does not show up on QRZ.com !!!

Anyway, its a pretty good time travel flick. Took my non-ham girlfriend and she liked it. (Normally she hates ham radio.) Star of the show is an old old Heathkit SB-100. The son sets it up in the movie with the cover off so you can watch the tubes glow while he talks to his dad. Of course this happens during a big sunspot cycle, auroras and all. Radio gets broken in the past and his dad fixes it.... kinda neat special effect when the radio breaks down in the future and then appears to fix itself.

Overall the movie was done very well and has a positive message about ham radio.

The rest of the movie is basically about time alteration. Police son saves dads life and Fireman dad returns the favor by helping solve a murder that occurred thirty years ago. Has a few plot novel twists which I won't give away.

Pretty good. I'd bring the XYL and older kids but leave the smaller ones in the care of a baby sitter.

I'd give this one two rubber duckies up...

(hihi I always wanted to do that - eat your heart Siskel!!!)

Source record: 67270

A load of new toys has arrived - so looks like I need more desk space!

The Gonset G-28 is an EXCELLENT 10 meter AM transmitter/receiver in a single cabinet - puts out a bit over 30 watts of well modulated AM - uses a single 6146 modulated by a pair of 6L6's. This one is SUPER clean, and totally original and unmodified. Sorry, no manual.

Price is $200, plus shipping.

No, the radio was definitely an SB-100 or SB-101 - complete with the tube-type LMO (as opposed to the solid state LMO on the SB-102)

Snip >>The connector plug is a straight one with 3 connectors<<

What ?? You mean a ring tip sleeve male (1/4" stereo phone plug)
Tip=Audio
ring=PTT
Sleeve=gnd
(most all cases 99.9%) when a phone plug is used to connect a mic

I'd agree. When they showed the faceplate I'm sure it said SB-301.
Plus, it didn't have a final cage...

George, KQ4MG .... built an SB-401 when I was 16... It was paired with a
Hallicrafters SX-117.

I noticed that too. The escutcheon did show SB-301. Viewing the
picitures and trailor clips from the Internet movie database doesn't
show the model number ,however since the meter was located on the
upper left side , that would mean that it WAS a receiver . The
SB-400/401 xmtrs and SB-100/102 tranceivers had the meter on the right
upper corner of the front panel.

Source record: 67197
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

It's kind of strange to hear people bash the 920's receiver.
I chose a 920 over a 746, *because* of the receiver, the ergonomics,
and the fact that I don't care for blue displays.
I'm sure some people will doubt the validity of ARRL reviews, and
certainly everyone has their biases, preferences, and some even have
amazing ears.
But looking at the two reviews side by side, while the 746 has a
slightly better noise floor, -143 vs. -138 at 14 mhz,
The 920's BDR and IMDDR are much better than the 746 at
129 and 97 respectively, vs. 113 and 92, at 14 mhz.
These kind of figures would seem to indicate a receiver that has
better strong signal handling capability. Not to mention the 920's
excellent dsp implementation, and noise blanker.

Just my opinion.

Yep,
I swore it said SB-301 also. Did anyone catch the call of the station
for sure ? I thought it was W2QYV which comes back from www.qrz.com as
a club station in NY. But I may have remembered it wrong ?

W2QYV:

Well, by God, I'm glad to hear an AC power cord can give "tighter bass
and more specific image location within the soundstage."

I'm still trying to figure out how people can spend thousands of
dollars for speaker cable. I guess a "reference" power cord had to be
next.

Thank goodness this lunacy hasn't hit ham radio. Yet.

What do you mean? I have one of these cords on my transceiver and
linear, and it added depth and clarity to my transmitted and received
audio, and gave everything a qunatum leap to my performance
envelope....(GRIN)

I think the people who buy these cords don't stop to think that after
their six feet of audiophile power cord, they have dozens of feet of
crappy house wiring, a questionable utility service drop, and then who
knows what out on the utility distribution poles.

n search of the perfect signal, I am looking for an electric supplier
that only uses oxygen free copper in its generator windings.

Yes I was astonished...that YOU aren't using one. The thing has been out since
1998. You're truly clueless about this, are't you?

About the Model 101: Many Boatanchor aficionados use them to improve the performance of the R-390 series of radios. In fact, I daresay that the R-390 would not have the reputation it has if it weren't for the Model 101 Powr Cord (with special-order mil connectors).

Many of us also use STAX headphones (only $3500) to hear every nuance coming out of the audio deck, and of course to reduce microphonics from the tubes we use a type of flotation device used to isolate turntables from noise from the floor (the best ones are a block of marble on springs).

Before these performance enhancements came along, R-390s were thrown into dumpsters or sold for $10 at fleamarkets, or crushed into a landfill.

David, you're just cheesed that you didn't think of it first! But
here's a freebie that you can patent yourself. Audiophile Sheetrock,
and\or Audiophile Furniture!. Just think of the possibilites of
producing these products specifically with the idiotphile im mind. It
isn't necessary that the stuff doesn't work at all, just get one
favorable review and your in fat city.

John Del

PS. You read it first here!

Nope...too late. The CES in Chicago about 8 years ago had
audiophile wall construction materials that had a sheet of
sorbothane between two layers of sheetrock. This was used to cover
the sandbags that were stuffed into the walls for deadening. Popular
science that year, had a story on interlocking urethane foam blocks
that could be used to line the walls of a listening room for sound
deadening, and isolation, so that neighboring apartments would be
free of the drone of a bass line from an intrusive stereo.

And audio absorptive furniture has been a staple of the CES for
years.

Got to get up PRIT--TEE early in the morning to get ahead of these
audiophiles.

Remind me to tell you the one about the Micronta clock digital
clock, that when plugged into the same outlet as teh power amp,
became a power conditioner. (this was seriously presented in a White
Paper at CES.)

CD Rings anyone?

These so-called high-end AudioPhiles are the some of the most gullable
people on earth, right up there with the cb crowd who try to push an AM
or SSB signal through a class C amplifier because it is more effecient.

I had one character follow me around with a compass wile running speaker
cables under the floor to be sure I kept them parallel to north and south
poles.
The salesman told him that crossing the earth's magnetic flux field would
slow down energy transfer and also to be sure he bought enough wire.

Subject: AudioPhiles Push the Envelope

if you want to follow up on the power cord debate, go to
rec.audio.high-end.
There seems to be two camps - one says "this can't possibly be
true, it's all in your head", the other that says "nonsense, I
hear a difference, so it's true"

I have tried some simple experiments, and I fall in the first
camp. On the other hand, there really is quite a distinct and
audible difference as you change to different kinds of
interconnect cables - at least this makes some sense because
the cables are carring the audio signal, and so they will act
as tone controls and what not.

I hope they develop special high performance BX or romex cable to upgrade
my house's housewiring. :-)

IMHO (YMMV), the only merits in their power cords is the thicker conductors
(14/3) and shielding. The shielding keeps the 120V sinewave from leaking
into the audio signal paths (hum). I think Belden wire and cable makes them...
For computer work.

Power cords can't affect the high frequency response. A well designed
power supply section in the audio amp should filter out any effects the
power cord could have.

Subject: AudioPhools Push the Envelope

It's a damn good thing it has great response at audio frequencies,
especially if you're using the AC power lines for speaker wires (which opens
a whole 'nother audiofool can of worms!)

From: Gary Schnabl <badBadger@badBadger.com>
Subject: BC-312 / BC-348 - still in use?

I altered mine to utilize sensitive 7-pin "miniature" tubes for the two RF and convertor stages. It was quite simple to do. I was a freshman in high school at the time (1957). Since it only goes to 18 MHz, I used convertors for the higher frequencies.

I also used the matching BC-375-E as the basis for the final stage of a 500 W AM rig. I used supermodulation similar to what commercial AM stations were using at that time.

HF is a pain? I thought that learning about radio was part (a big part)
of what ham radio is about. What fun would it be if it didn't require
some learning and effort?

Sure, the internet is fast and easy. It has its place. But it's no
replacement for ham radio, with its challenges and pleasures.

I'm not trying to flame. Ham radio isn't for everyone. If it ever
becomes that simple and easy, I'll no longer be active in it.

From: Cortland Richmond <ka5s@saber.net>
Subject: Trio 9R-4 receivers vs Lafayette HE-10/KT200

I see some differences between my 9R-4 and pictures on Mr. Hanzawa's and
Mr. Okada's sites. Specifically, the 9R-4 I have has the RCA jack on the
back panel mounted above the antenna connectors, rather than below.
Also, it has a BFO pitch control mounted just below the main tuning
dial. While this might have been an added modification, it appears to
have the same attaching hardware as the S-meter and therefore could very
well be a variant type between the 9R-4 and the 9R-4J.

There is a difference in front panel attaching hardware used on HE-10's
and KT-200's from the 9R-4. The 9R-4 uses cross-head screws to secure
the panel to the cabinet, but it uses straight-slot screws to secure the
S-meter and (in my receiver) the BFO pitch capacitor to the front panel.
The Lafayette receivers use cross-head screws for the S-meter as well
(and on these receivers the BFO capacitor is mounted with a threaded
nut, not screws).

I have two KT-200 receivers, and one HE-10, and the Lafayette receivers
show differences, too. One of my KT-200's uses the same five-pin socket
on the rear panel as the 9R-4, the other KT-200 and also my HE-10 use an
octal socket.

Without a date stamp it is not possible for me to tell if these changes
occurred one after the other or were implemented as parts became
available or ran out.

Hi,

People should never see movies that they are expert in. After
all it was just a movie. Sure the tech is flawed, all sci-fi
are (this one a little more than most others I have to admin).
Time plots are really flawed because things have to happen
they way they did. Otherwise there would be no reason to go back
and change them. The classic paradox.

I thought this was a fun movies as long as you keep your eyes
off the man behind the curtain. If you don't you find flaws
all over the place.

Not a great movie, but not a bad one either.

Just my own opinion .. I have decided that I don't like EBAY sales.

I would much rather come to some agreement instantly with some other post which sells an object ... and to find out immediately whether or not I will get the object. Waiting out several days to find out whether or not I win a bid does not get me the coveted object usually. To my experience, most EBAY bids wildly exceed the worth of the object. OK for the seller, I guess, and for those who simply MUST have it at any price.

Probably deleted because it's a non-type-accepted, commercially (not home) built amplifier which includes coverage of the 11 meter band.

They are almost paranoid in keeping the government off their backs over there. I imagine if you had a one-channel high-band scanner and said it was "unblocked" (it is, right?) E-bay would delete it. (grin)

1550. ISO Icom IC-2A PTT Switch

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-02 00:00:00 UTC
From: Donald Smith <desmith@innercite.com>
Message-ID: <390F0F86.BF510081@innercite.com>
Source record: 67216
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.boatanchors

Good morning. I have a Icom IC-2A that is in need of the PC mounted PTT switch that mounts on the main board. Everything works fine with the external mike but would like to get it to work without the external mike. Does anybody have an extra switch that they can send, or point me in the right direction. Will gladly cover all costs. Thanks and
73's Don KB6GQA

1551. [FA] NCX-3 in original box, w/ manuals, matching ser#'s

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-02 00:00:00 UTC
From: Patricia Gibbons <wa6ube@ix.netcom.com>
Message-ID: <390F2A4A.4791@ix.netcom.com>
Source record: 67217
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

This NCX-3 was acquired about a year ago, and I have
too many radios already .. This radio appears as new
and has the matching power supply, original boxes,
manuals, and an Electrovoice Model 600D microphone
that is also New-Old-Stock, in the original box,
and never had a mic connector on it..

I put this rig on the air and used it on CW for a while.
I also left it running during the day for a few days
to see if it would develop any power supply problems
and it ran fine.. I never used it on SSB however..

see:

I have 3 different CD's for sale. Each contains books and manuals
in Adobe .pdf format. There is an installable copy of the Adobe
Reader 4.05 on each CD for anyone who doesn't already have it.

CD #1 -- Tube data. Eimac 1948 and 1975 catalogs with tube specs.
RCA TT-3 and TT-5 air cooled transmitting tube guides.
RCA RC-22 receiving tube manual. GE Essential Characteristics
receiving tube manual.

CD #2 -- Surplus conversion info. Command Sets, Surplus Conversion
Manuals vols 1, 2, and 3. BC-312, BC-342, BC-348 manuals.
Guide to Aircraft Radio Corporation Receivers. Index to
Surplus listing articles in QST, CQ, and 73 magazine.

CD #3 -- Military equipment manuals covering T-195, T-368 (through
E model), BC-610 E thru I, BC-312, BC-342, BC-348, BC-614
speech amp, ME-165G wattmeter, URM-25D signal generator,
R-274 receiver (SX-73), Military tube cross reference, and
BC-1031 panadaptor.

Each CD is $10 which includes first class postage in US. If you
would like any, please e-mail me at plmills@attglobal.net.

thanks,
Phil

Hi; thinking of trading my sp-600 as rearranging the shack.
no cabinet and I have it rack mounted, works great, looks are
probably 8 of 10, all original, non-smoker.
would be interested in a hq-180 type receiver in great working
condx, looks not super important. or what have you? tube type
rcvr or possible transceiver if small.
Location important as I cant ship it. my qth is exactly on
ny,nj,pa border and I-84 goes through it.
any interest or questions pls email me direct.
thank you Jim kwu Matamoras, pa. 18336

All Electronics and places like DigiKey routinely sell those
little switches. While I don't know EXACTLY what switch is
in the IC-2A, you might be able to kludge something in.

If you do buy generic, be aware that some of those switches
DO NOT short, they just go from high resistance to moderate
resistance. This is actually ok in most matix applications.

I had to repair a radio in an old Dodge Caravan that had a
soft drink splash on it, and it took out about 5 or so of the
buttons. They aren't hard to replace, but if you can't get
exact, get one that is not as 'TALL' as the original. You can
always space it up, you can't always easily cut it down.

I'd have to actually look at my IC-3AT to see what the switch
is.

Mike

For sale: MilSpec Tube Tester. This is a mint shape unit. Orignally built
for the military, it is an I177B Dynamic Mutual Conductance tester.
Includes tube book...dated 1950, but updates may be obtained or so I'm told.

This is a true dynamic mutual conductance tester (can measure actual
micromhos or be set to indicate good/replace) that tests for shorts and gas.
Has 6 different test sockets- 4 pin, 5 pin, 6 pin, 7 pin, octal, loctal,
noval,
miniature, and acorn.

I'll send you a jpg upon request. It's in really beautiful shape.

Buyer pays actual shipping cost. This unit weighs about 20 lbs and is very
nicely portable with lid and handle and spring snap closures.

$140 plus actual shipping cost.

Hi All

Just got myself what looks like a CR100 or B28 with a few small problems.
100hz ripple on CW and SSB. Broken drive-cord on wavechange switch.
Powers up and receives signals. Need schematic, picture to confirm model.
(no name plate).

6 Bands. 60 kHz to 30 MHz
Noise blanker. Bfo. Variable bandwith 100Hz to 6000Hz. 12 tubes. RIS input
blanked off. Hole in panel labelled RIS. Blue front panel white lettering.
Black case. Weighs about 70 - 80Lbs

Any other info or mods appreciated.

Thanks

OUT of curiosity Tom did you make your selection base purely on printed specs - or in actual, direct, real-life on-air comparisons? After all, individual units DO display performance variations from unit to unit, and it's what they actually do in YOUR specific environment that counts - NOT what shows up in a scope in some obscure distant electronics lab - and THAT was MY point... NOW, if the "ergonomics" and "blue display" was the governing factor, that's another thing...

For Auction:
Hammarlund HQ-180C. Working original clock. Repro manual/service manual. Good condition overall. If you don't mind the incorrect tuning knobs on the main and bandspread this one's for you. Loose knob on the U/L sideband switch. This unit has the Hammarlund vernier tuning mod, so that's a plus. Front panel and cabinet good, could use a little TLC via a nice (soap or solvent of your choice) cleaning. Otherwise working and good audio.

the plymouth to which I referred was a 1938 p-6 which cost $646 according to the catalog. don't remember if that included a radio, but it certainly weighed more than a modern equivalent - after all it had a frame and real iron parts - about the only plastic is the steering wheel itself, and I suppose that's really hard rubber.

anyway, the direction I thought would be interesting to explore is the "tweeks" done in the 20s and 30s for "high end audio" - today we find things like special green marking pens to draw around the edge of a CD, and special power cords (or my favorite, a $150 power outlet). Rather than debate whether these things work - rec.audio.high-end takes care of that debate, how about talking about equivalent "fringe" things done in the time of the radios that this group discusses.

I remember seeing one on ebay last year some time. It was rumoured
that Joe Walsh, the musician bought it fo BIG bucks. Funny though, the
serial number on the one he got is one number lower than the one I
have in the shack. Wonder if he wants it's sister?

Ni Guys;
I have for sale a Kantronics KAM All-Mode tnc.
This Kantronics All-Mode TNC comes with a Wall Supply, cables and Manual in a Loose Leaf Binder everything in better than Excellent shape! The TNC S/N is 100 02250 and is Version 5.01. The Manuals include: Commands/Operations and Installation Manuals. I also have the HostMaster II Manuals BUT NO SOFTWARE. There is indication in the Loose Leaf Binder that the "Smart Watch" and 32K Static Ram chip was installed along with the version 5.01 update. The Six(6)Cables include: Din to Din, Mike to 9 pin DB, RS-232 to RS-232, (2)RS-232 to DB, 8 pin DIN to rca's. Whew! There is too much to check out here so I am offering it very reasonable. All I can say is that it was all dismantled from an estate. Real Nice Clean Stuff
If you wanna see a picture of it, try this URL>>
http://members.aol.com/nutzrus/kam.jpg
Price is $100 plus some help with shipping from 11758.

Watch out for heat damage to the PCB around the audio amplifier tube 6BM8 I think the number is. Mine has a warped PCB in that area and the traces are lifting off of the board There was a problem neutralizing american 6KD6 tubes. There was a service note available from Yaesu on this. I do not have it, but wish I did. I have two FTDX560's and will have a good working one by this winter when time permits. There was a fan option for this rig and if you do not have it, it would be an excellent idea to hang a 4" muffin fan on the back of the radio behind the PA cage. The thing gets mondo hot without it.

I dragged out my old SB-102 out of the basement last nite and fired it up. Unkown to me....a great solar flare and ion storm was raging at the same time.

I was tuning around on 15-Meters when I heard my Old Man's voice eminating from the 5X7 oval speaker. I was communicating with my "Dad"....it was him - - - The Old Man!

Talked to Hiram for several minutes before the pile-up ensued and I went QRT. Anybody else work him?

From: Patricia Gibbons
Subject: [FA] NCX-3 in original box, w/ manuals, matching ser#'s

This NCX-3 was acquired about a year ago, and I have
too many radios already .. This radio appears as new
and has the matching power supply, original boxes,
manuals, and an Electrovoice Model 600D microphone
that is also New-Old-Stock, in the original box,
and never had a mic connector on it..

I put this rig on the air and used it on CW for a while.
I also left it running during the day for a few days
to see if it would develop any power supply problems
and it ran fine.. I never used it on SSB however..

From: "Bill Noble"
Subject: AudioPhiles Push the Envelope

the plymouth to which I referred was a 1938 p-6 which cost $646 according to the catalog. don't remember if that included a radio, but it certainly weighed more than a modern equivalent - after all it had a frame and real iron parts - about the only plastic is the steering wheel itself, and I suppose that's really hard rubber.

anyway, the direction I thought would be interesting to explore is the "tweeks" done in the 20s and 30s for "high end audio" - today we find things like special green marking pens to draw around the edge of a CD, and special power cords (or my favorite, a $150 power outlet). Rather than debate whether these things work - rec.audio.high-end takes care of that debate, how about talking about equivalent "fringe" things done in the time of the radios that this group discusses.

Subject: FA: Hammarlund HQ-180C

For Auction:
Hammarlund HQ-180C. Working original clock. Repro manual/service manual. Good condition overall. If you don't mind the incorrect tuning knobs on the main and bandspread this one's for you. Loose knob on the U/L sideband switch. This unit has the Hammarlund vernier tuning mod, so that's a plus. Front panel and cabinet good, could use a little TLC via a nice (soap or solvent of your choice) cleaning. Otherwise working and good audio.

Subject: FS: Mil-Spec Tube Tester

For sale: MilSpec Tube Tester. This is a mint shape unit. Orignally built
for the military, it is an I177B Dynamic Mutual Conductance tester.
Includes tube book...dated 1950, but updates may be obtained or so I'm told.

This is a true dynamic mutual conductance tester (can measure actual
micromhos or be set to indicate good/replace) that tests for shorts and gas.
Has 6 different test sockets- 4 pin, 5 pin, 6 pin, 7 pin, octal, loctal,
noval,
miniature, and acorn.

I'll send you a jpg upon request. It's in really beautiful shape.

Buyer pays actual shipping cost. This unit weighs about 20 lbs and is very
nicely portable with lid and handle and spring snap closures.

$140 plus actual shipping cost.

Subject: fs: Palomar 40-10 mtr Tube Amp, 7 in=300 out!

Probably deleted because it's a non-type-accepted, commercially (not home) built
amplifier which includes coverage of the 11 meter band.

They are almost paranoid in keeping the government off their backs over there. I
imagine if you had a one-channel high-band scanner and said it was "unblocked"
(it is, right?) E-bay would delete it. (grin)

From: plmills@attglobal.net
Subject: FS CD's with tube data and mil ba books

I have 3 different CD's for sale. Each contains books and manuals
in Adobe .pdf format. There is an installable copy of the Adobe
Reader 4.05 on each CD for anyone who doesn't already have it.

CD #1 -- Tube data. Eimac 1948 and 1975 catalogs with tube specs.
RCA TT-3 and TT-5 air cooled transmitting tube guides.
RCA RC-22 receiving tube manual. GE Essential Characteristics
receiving tube manual.

CD #2 -- Surplus conversion info. Command Sets, Surplus Conversion
Manuals vols 1, 2, and 3. BC-312, BC-342, BC-348 manuals.
Guide to Aircraft Radio Corporation Receivers. Index to
Surplus listing articles in QST, CQ, and 73 magazine.

CD #3 -- Military equipment manuals covering T-195, T-368 (through
E model), BC-610 E thru I, BC-312, BC-342, BC-348, BC-614
speech amp, ME-165G wattmeter, URM-25D signal generator,
R-274 receiver (SX-73), Military tube cross reference, and
BC-1031 panadaptor.

Each CD is $10 which includes first class postage in US. If you
would like any, please e-mail me at plmills@attglobal.net.

thanks,
Phil

OUT of curiosity Tom did you make your selection base purely on printed specs - or in actual, direct, real-life on-air comparisons? After all, individual units DO display performance variations from unit to unit, and it's what they actually do in YOUR specific environment that counts - NOT what shows up in a scope in some obscure distant electronics lab - and THAT was MY point... NOW, if the "ergonomics" and "blue display" was the governing factor, that's another thing...

From: "J.Parry"
Subject: Info on the Icom 761

Hi,

I would echo John's comments - I've a 761 and it's a fine rig.
Synthesiser noise is present when tuning, especially on the
higher bands but is not a problem. I spoke to ICOM UK about
it and it appears it's normal. As I say it's not a problem.

I also find the built-in auto tuner works very well. Using
my Carolina Windom which gives pretty high SWR on most
bands the tuner happily copes (better than it's rated 3:1 or
less rated capability).

As John says, the transmitter sounds nice, the receiver does too.

Oh and if it does give problems the Handbook is excellent and
there a list of known problems and cures on the ICOM America
web site !

Cheers de John GW3VVC
Island of Anglesey.

Subject: ISO Icom IC-2A PTT Switch

Good morning. I have a Icom IC-2A that is in need of the PC mounted PTT switch that mounts on the main board. Everything works fine with the external mike but would like to get it to work without the external mike. Does anybody have an extra switch that they can send, or point me in the right direction. Will gladly cover all costs. Thanks and 73's Don KB6GQA

Date: Tue, 02 May 2000 21:14:42 GMT
From: "Mike Yetsko"
Subject: ISO Icom IC-2A PTT Switch

All Electronics and places like DigiKey routinely sell those little switches. While I don't know EXACTLY what switch is in the IC-2A, you might be able to kludge something in.

If you do buy generic, be aware that some of those switches DO NOT short, they just go from high resistance to moderate resistance. This is actually ok in most matix applications.

I had to repair a radio in an old Dodge Caravan that had a soft drink splash on it, and it took out about 5 or so of the buttons. They aren't hard to replace, but if you can't get exact, get one that is not as 'TALL' as the original. You can always space it up, you can't always easily cut it down.

I'd have to actually look at my IC-3AT to see what the switch is.

Mike

From: "Derwyn Williams"
Subject: re : cr100 or b28 I THINK

Hi All

Just got myself what looks like a CR100 or B28 with a few small problems.
100hz ripple on CW and SSB. Broken drive-cord on wavechange switch.
Powers up and receives signals. Need schematic, picture to confirm model.
(no name plate).

6 Bands. 60 kHz to 30 MHz
Noise blanker. Bfo. Variable bandwith 100Hz to 6000Hz. 12 tubes. RIS input
blanked off. Hole in panel labelled RIS. Blue front panel white lettering.
Black case. Weighs about 70 - 80Lbs

Any other info or mods appreciated.

Thanks

Derwyn

Thanks very much for the plug!

For beginners I would urge you to not use the ftp URL, but rather go
to the web front page at http://bama.sbc.edu
There are links from the front page to pages for info on downloading,
viewing, printing and scanning as well as the various equipment areas.

Subject: Yaesu FTdx560...about to buy...Comments?

I'm one of those terrible "new" hams (tho have been around amateur radio for many years...just went into the computer field instead of amateur radio) who will soon be upgrading to General. I want a CW rig which is also SSB capable and found an old FTdx560 for sale. Cheap enough, and a good tinkertoy. Price is $150, unit was in use until last month. Finals are good but a bit weak, receiver seems strong. I've already received several pro/con comments, but would appreciate any further comments from those more experienced. I'm experienced in tube gear repair, tho light on recent practice. Any helpful comments?

For the OT's, yes, I DO plan to use CW some, tho not as much as some of my old ham buddies who have years of experience. I find it as interesting as stitching Grade A cotton onto a AirKnocker wing or for that matter, onto a Monocoupe D145 or 110 Special (certain NC hams, esp. oldtimers, will understand). Keeps some of the flavor of WHY amateur radio exists. And, no, I never was a CB'er. Hope to meet many interesting folks <> on the HF bands in the near future.

1589. Wouff Hong

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-03 00:00:00 UTC
From: Steve Fried <k2pts@home.com>
Message-ID: <391026F2.F54CD168@home.com>
Source record: 67153

For Trade or Sale (prefer trade)

One each only Wouff Hong.

The wouff Hong is restored and working on all bands (does not include WARC frequencies).
Full output. This is one of the earlier models made, thus the sensitivity is fantastic.
It is somewhat heavy as the older models tended to be built better and was not solid state.
I believe this is a 1956 model, but not sure (it has the double horizontal straps).

Due to its age, it is being sold as-is. But it is working and in good order.
I think any owner would be proud to display this as a center piece for their collection.
However it still can be used fully for its original intended purposed.
There is probably more need for a working Wouff Hong now, than any time in Ham Radio.

I have actively used the Wouff Hong and have testimonial letters attributing to its fine results.
(Due to current laws, it is sold only as an "entertainment device" and no claims are made herein)

Will entertain bids over $1000 or take interesting items in trade.
(This is the model made in Newington, Connecticut - before incentive licensing)

Will not sell to unlicensed party. This model was written up in QST in the very early fifties.
I think it was an article by W1IOU, Larsen Wrapp. Please check it out.

Respectfully Submitted,

Steve k2pts

Bob Gradinski claims that he can 'hear' the type of wire being
used in an interconnect upon first hearing of the system. Bob,
however, is a little out there.

There have been some A/B tests of high end interconnects vs off
the shelf interconnects from Radio Shack, or other general purpose
interconnects, and there was indeed a difference in sound quality
and performance. Julian Hirsch measured capacitive and resistive
components and identified these two components as the culprits
accounting for the difference. The very high end interconnects
frequently employ complex winding and twist schemes, and different
diameter strands in the conductors, ostensibly to compensate for
capactive losses at the high end, and they do have an audible
effect, but create phasing errors in the top end through the
distributed capacitance across winding in high twist rates.

This is actually distortion, rendering the effort counter
productive.

Hirsch noted that the differences were very measurable, and very
audible in blind A/B tests, but that the most accurate signal
transfer was with a good grade of high quality wire, of low
interconductor capacitance, and high degree of consistency. Belden
makes such wire. So does Canare. It's not very expensive, and it's
easy to work with.

From my own measurements, the quality of the solder connection
to the connector at the end of the wier often makes more difference
in the measured resistance than the resistance measured over the
lenght of the wire.

As usual, technique is important, and neatness counts.

> I also don't believe (and A/B tests back me up on this one) that there's

You really need to go to a Consumer Electronic Show and whisper
this in one of the rooms. It's as much fun as putting the word
"Fragile" on a UPS package. Truth is, that for the same reasons as
above, you're exactly right. Quality makes a difference, gimmickry
does not. Nature in her wisdom, the rules of Physics are not
repealed by effective marketing.

What most audiophiles don't get, and I am one, so I speak with
kindness, is that the differences in speaker cord, interconnects,
may be an order of magnitude smaller than the differences in the
perceived sound caused by just closing the drapes in the listening

room. Or adding another clothed human body.

For sheer entertainment for the dollar, there is no greater value
than a Consumer Electronics Show. Just try not to openly laugh in
someone's face. And nod knowingly. A lot. Or you'll never get away
from the pitch.

That was the TICE Clock. Sold like hot cakes... and nowadays you can buy
BEAKS from a Quebec company
(no no names...) small bullet shaped "conditionner" for speaker. They're
made of steel I believe anbd
weight around 8 ounces each. You simply drop them on top of your
speakers and they make an incredible difference...in your wallet.

The show must go on... and it's not over 'till the fat lady sings (but
they never said if it had
to be in a valve amp or a solid state one ...darn.)

May I suggest one simple test to definitely show that a well designed
power cord DOES make a difference?

Simply plus a computer on the same line as a High-Definition amp (i.e.
the ones I designed have a
frequency response of 0 - 600khz, no that's not a typo !) and listen to
soft jazz music and you'll hear the garbage coming in. That's for other
high class amps (in the 3-10k$) because of...

> A well designed
> power supply section in the audio amp should filter out any effects the
> power cord could have.

I don't have that problem because all power supplies I designed are
Fully-regulated, including output.
Sumo amps uses the same design. And the power cord I use costs 50$
Because it is shielded and use a
separate ground. If you pay more than this, it's a steal. So the problem
is not really the power cord,
it's the supposed high class amp's power supply and the hype of very
expensive gears and tweaks!

Of course if your complete hi-fi gear cost you 1000$, ANY power cord or
Speaker cables won't make any
difference, but again, well designed speaker cables (in the 100-250$)
DOES make a huge difference on
expensive speakers. There is a LOT of B.S. in the high-end audio
industry, but not everything is...

This is seriously off topic, but I can't resist one comment in this
thread. Before Christmas I was looking at CD mega-changers, the kind
that hold 200 CDs or more. At one audiophile shop I asked
them what the differences were between 2 different models of the same
brand. The sales guy explained how the higher priced one had much
better D/A converters, etc., and a variable output level. I asked
what that was for and he explained quite seriously that it was to
compensate for the difference between a 3 foot and a 6 foot interconnect.
You know that extra length means extra resistance and you have to
tweak the level up to compensate . . .

I left and vowed not to ever give that place any business.

From: David Stinson
Subject: AudioPhiles Push the Envelope

There's a boatanchor connection to all of this.

There is an old saying:

"Human beings have the singular ability to ignore facts
that conflict with cherished beliefs."

Much of the audiophile tom-foolery is driven by human
psychology and the need to be part of the "audio" social order.
If one of the audiophile "alpha males" says that a certain
type of copper makes a noticeable difference, no member of
the pack is going to gainsay him- to do so is to risk
ostracism from the pack. The need for socialization
under the audio "alpha males" is so strong that the brain
of the disciple will actually manufacture a "difference"
in sound quality when accurate instruments show none,
or one too small to be discerned by the human ear.
Go to CES sometime and sit in on the demonstrations.
It should be required for anyone studying human social groups.

This same effect is evident in many boatanchor groups.
One or more of the group "alpha males" says that
full plate modulation in a transmitter is sonically
superior to any other type, even when measurements
of properly designed alternative modulation schemes show
little discernible difference (at least at average modulation levels).
Say differently, and you'll catch heck from the rest of the pack.
Watch the remainder of this thread and see ;-).
Find a group dedicated to a certain boatanchor, or
a certain microphone or audio processing chain and
you'll see the same effect operating in some fashion.
This sort of behavior isn't always "bad;"
socialization in human groups is very necessary.
But, when taken to the extreme, it can lead to group delusion,
such as is evident in the audiophile pack.

In any case, it's usually not profitable to disturb the
social order in a pack. The audiophiles (arguably) aren't hurting
anyone else, and we can only make enemies by attempting to
show them "the error of their ways." The audio "alpha males"
are enriching themselves at the expense of the pack members,
but that's been the way of the world since the dawn of time.
Call it the reward they receive for the leadership they provide.
In time they, like all despots, will over-reach and topple.
So mote it be, world without end, amen and amen...

I"m not familiar with teh TICE clock. The presentation to which I refer is the audiophile who discovered that his midrange improved if a Micronta digital clock was plugged into the some outlet as the amp. There was copious mathematics to show that the digital noise from the clock feeding back into the lines got into the power supply of the amp and enhanced the sinusoidal shape of the A/C wave, eliminating midrange distortion.

When I heard about this one, I went to the concessions and bought a bucket of popcorn, sat down in the front row and listened intently...when the speaker took a breath, I asked, "you mean to tell me, that the 250,000 ufd capacitor block and the regulator couldn't catch a noise component 185 db below the input wave?

The near riot of technical snow that followed from the 25 or so audiophiles in the room was very nearly as entertaining as the State Room Scene in 'A Night at the Opera."

To his near fury, the speaker was a friend of the engineer I went with. And we found ourselves opposite the lunch table.

Neither of us had anything that stained.

Maybe ! Line filtering is mandatory of course, but works mainly on emf
noise, not all rf
induced noise will be filtered, but remember, all links in a chain must
be carefully checked
and bring only part of the answer.

Going back to my radio, I really don't care about noise and static when
doing so, and it's a good
thing... :-)

As a new HAM I considered both radios. There was just something about the audio of the 920 that sounded better to me. I too often hear from experienced operators their preference for the 746 with little underestanding.

How did I solve this dilemma? I bought an Elecraft K2!

Steve

tap@value.net wrote in message <390e5258.310286981@news.value.net>...

FS Drake 2A & Speaker/Qmultiplier This radio was DOA when I bought it aout a year ago...I repaired it gave it a complete alignment job...replaced a few tubes, etc comes with a manual instead of the 6X4 rect. tube it has diodes instead...rcvr looks great and it works like its supposed to...Q Multiplier with this rcvr is hard to beat..has notch filter and with a little talent you can achieve less than 100hz filtering on CW or if you just want to listen to the guys on AM...it has a wide 4.5khz filtering or 2.4khz for SSB...chassis has some discoloration on the copper but does not affect performance....$200 plus shipping

Praetorian,

I see this complaint all the time about eBay. There is a very simple solution to your gripe: Just look at items that are about to expire. If you don't like the bid price at that point pass, else make a bid and in a short time, maybe even minutes you'll know if you won. Actually a faster response time than contacting most NG sellers. Also, eBay has a better search facility.

73,

Casey

Hi folks,

I have for sale a very nice Heath/Daystrom HD-11 Q-multiplier. This one has the two-tone green paint scheme with glossy paint. The front panel is excellent, with only the slightest hints of wear, and the paint is mirror-like in its shine. The original knobs are also excellent. Inside, this is one of the cleanest pieces of 1950's gear I've ever seen... it literally gleams. There are some paint chips on the cabinet, and there is an area on the rear panel that looks as though someone may have spilled alcohol on it (the paint is intact, just discolored somewhat). This is not a real common item, and this one is THE nicest of its kind that I've ever seen. It is untested, although it sure looks like it ought to fire right up. The power and RF cables are original and nice. Price? $60.00 -postpaid- in CONUS.

There's one on Ebay now!!! 1938 vintage, as I recall. What's needed,
though, is a vintage rettisnetch....don'tcha know!!

1609. Are you into HF Military radio gear? See this:

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-03 00:00:00 UTC
From: Patricia Gibbons <wa6ube@tactical-link.com>
Message-ID: <8eq52kqob1@slb7.atl.mindspring.net>
Source record: 67173
Cross-posted to: alt.ham-radio.exotic-modes,alt.ham-radio.hf,rec.radio.amateur.boatanchors,rec.radio.shortwave,rec.radio.swap

For those into military radio gear, there has been an on-the-air
net on the amateur 40 meter band. This net has moved to a
new time:

COVERAGE AREA: US West coast to parts of the Midwest..
TIME: Wednesday evenings at 9:00 PM Pacific Time
FREQ: 7296.00 KHz, Upper Sideband

Anyone reading this in time, may be able to check in to our net
that will be on the air this evening since it is Wednesday .. :-)

Upper sideband is used so that those, having military HF radio
gear that only has USB, can check in without having to modify
their equipment...

This net is hosted by the members of the "armyradios" mailing
list, located at <http://www.onelist.com/community/armyradios>
and consists of about 225 members currently..

For further info, see:

<http://www.tactical-link.com/armyradios_discussions.htm>

Thanx for reading this ..

I'm one of those terrible "new" hams (tho have been around amateur radio for many years...just went into the computer field instead of amateur radio) who will soon be upgrading to General. I want a CW rig which is also SSB capable and found an old FTdx560 for sale. Cheap enough, and a good tinkertoy. Price is $150, unit was in use until last month. Finals are good but a bit weak, receiver seems strong. I've already received several pro/con comments, but would appreciate any further comments from those more experienced. I'm experienced in tube gear repair, tho light on recent practice. Any helpful comments?

For the OT's, yes, I DO plan to use CW some, tho not as much as some of my old ham buddies who have years of experience. I find it as interesting as stitching Grade A cotton onto a AirKnocker wing or for that matter, onto a Monocoupe D145 or 110 Special (certain NC hams, esp. oldtimers, will understand). Keeps some of the flavor of WHY amateur radio exists. And, no, I never was a CB'er. Hope to meet many interesting folks <<grin>> on the HF bands in the near future.

Andrew

Source record: 67242

Hi,

I would echo John's comments - I've a 761 and it's a fine rig.
Synthesiser noise is present when tuning, especially on the
higher bands but is not a problem. I spoke to ICOM UK about
it and it appears it's normal. As I say it's not a problem.

I also find the built-in auto tuner works very well. Using
my Carolina Windom which gives pretty high SWR on most
bands the tuner happily copes (better than it's rated 3:1 or
less rated capability).

As John says, the transmitter sounds nice, the receiver does too.

Oh and if it does give problems the Handbook is excellent and
there a list of known problems and cures on the ICOM America
web site !

Cheers de John GW3VVC
Island of Anglesey.

1633. Boatanchor question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-04 00:00:00 UTC
From: watsons@aol.com
Message-ID: <20000503225151.21648.00001171@ng-fe1.aol.com>
Source record: 67094

I'm thinking about buying a used (there's no other kind of course) boatanchor. I'm getting back into ham radio after being out for about 20 years. When I was a kid I had a Hallicrafters SR-160 and a friend of mine had a Heath HW-100 so I have an idea what it takes to tune and maintain one.

With tubes getting more and more expensive and rare which boat anchors can be recommended for using a majority of available tubes and having inexpensive finals?

Thanks.

Scott

Subject: "FREQUENCY" --- My Old Man

I dragged out my old SB-102 out of the basement last nite and fired
it up. Unkown to me....a great solar flare and ion storm was raging
at the same time.

I was tuning around on 15-Meters when I heard my Old Man's voice
eminating from the 5X7 oval speaker. I was communicating with
my "Dad"....it was him - - - The Old Man!

Talked to Hiram for several minutes before the pile-up ensued and
I went QRT. Anybody else work him?

The Old Man didn't like it when I tail-ended his last QSO. I
took a terrible beating from the Wouff Hong and Rettysnitch that
materialized out of the ether above my 10KW Collins Autotune.
The ingrate also refused to QSL. See if I work him again.

I don't think people were as stupid back then as to debate how many
angels could dance on the point of a steel phonograph needle. Most of them
had actual lives then also, so that they had better things to do.

From: watsons@aol.com (Watsons)
Subject: Boatanchor question

I'm thinking about buying a used (there's no other kind of course) boatanchor. I'm getting back into ham radio after being out for about 20 years. When I was a kid I had a Hallicrafters SR-160 and a friend of mine had a Heath HW-100 so I have an idea what it takes to tune and maintain one.

With tubes getting more and more expensive and rare which boat anchors can be recommended for using a majority of available tubes and having inexpensive finals?

Thanks.

From: k5dh@raytheon.com (Dean Hemphill, K5DH)
Subject: FS: Heath/Daystrom HD-11 Q-multiplier

Hi folks,

I have for sale a very nice Heath/Daystrom HD-11 Q-multiplier.
This one has the two-tone green paint scheme with glossy paint.
The front panel is excellent, with only the slightest hints of
wear, and the paint is mirror-like in its shine. The original
knobs are also excellent. Inside, this is one of the cleanest
pieces of 1950's gear I've ever seen... it literally gleams.
There are some paint chips on the cabinet, and there is an area
on the rear panel that looks as though someone may have spilled
alcohol on it (the paint is intact, just discolored somewhat).
This is not a real common item, and this one is THE nicest of
its kind that I've ever seen. It is untested, although it sure
looks like it ought to fire right up. The power and RF cables

are original and nice. Price? $60.00 -postpaid- in CONUS.

73,
Dean, K5DH

From: Jim/Julia
Subject: HF military radio collector's net!

Hre is a listing from rec.radio.swap. It's a fun group. Please join in.
Thanks. Jim W7LS

For those into military radio gear, there has been an on-the-air
net on the amateur 40 meter band. This net has moved to a
new time:

COVERAGE AREA: US West coast to parts of the Midwest..
TIME: Wednesday evenings at 9:00 PM Pacific Time
FREQ: 7296.00 KHz, Upper Sideband

Anyone reading this in time, may be able to check in to our net
that will be on the air this evening since it is Wednesday .. :-)

Upper sideband is used so that those, having military HF radio
gear that only has USB, can check in without having to modify
their equipment...

This net is hosted by the members of the "armyradios" mailing
list, located at
and consists of about 225 members currently..

For further info, see:

Thanx for reading this ..

From: "Steve Huss"
Subject: IC 746 VS FT 920?

As a new HAM I considered both radios. There was just something about the
audio of the 920 that sounded better to me. I too often hear from
experienced operators their preference for the 746 with little
underestanding.

How did I solve this dilemma? I bought an Elecraft K2!

Steve

tap@value.net wrote in message <390e5258.310286981@news.value.net>...
>It's kind of strange to hear people bash the 920's receiver.

From: Steve Fried
Subject: Wouff Hong

For Trade or Sale (prefer trade)

One each only Wouff Hong.

The wouff Hong is restored and working on all bands (does not include WARC frequencies).
Full output. This is one of the earlier models made, thus the sensitivity is fantastic.
It is somewhat heavy as the older models tended to be built better and was not solid state.
I believe this is a 1956 model, but not sure (it has the double horizontal straps).

Due to its age, it is being sold as-is. But it is working and in good order.
I think any owner would be proud to display this as a center piece for their collection.
However it still can be used fully for its original intended purposed.
There is probably more need for a working Wouff Hong now, than any time in Ham Radio.

I have actively used the Wouff Hong and have testimonial letters attributing to its fine results.
(Due to current laws, it is sold only as an "entertainment device" and no claims are made herein)

Will entertain bids over $1000 or take interesting items in trade.
(This is the model made in Newington, Connecticut - before incentive licensing)

Will not sell to unlicensed party. This model was written up in QST in the very early fifties.
I think it was an article by W1IOU, Larsen Wrapp. Please check it out.

Respectfully Submitted,

Steve k2pts

Subject: Wouff Hong

Would anyone know the mod to get this thing going on 160M? I have a '30's version that I would like to put on there. I think it's got something to do with adding extra inductance to it's coils. Also, would 160M coils from a BC-610 work on this model?
I know of a fellow or two that had it done to his '50's vintage model. I have one I currently use on amplitude compandered sideband with a homebrew adapter. I use a B&W product detector I rigged up to it's two IF's. I use it strictly on 75 meter phone (I know it's bandwidth is rather wide)
Old H.P. Maxim really know his stuff when he came out with this thing! It sounds even better than a CE-100V!

From: Randy & Cara Randall
Subject: Yaesu FTdx560...about to buy...Comments?

Watch out for heat damage to the PCB around the audio amplifier tube 6BM8 I think the number is. Mine has a warped PCB in that area and the traces are lifting off of the board There was a problem neutralizing american 6KD6 tubes. There was a service note available from Yaesu on this. I do not have it, but wish I did. I

have two FTDX560's and will have a good working one by this winter when time permits. There was a fan option for this rig and if you do not have it, it would be an excellent idea to hang a 4" muffin fan on the back of the radio behind the PA cage. The thing gets mondo hot without it.

Oh GOOD! Waves faster than the speed of light. Generates heat, too. I
bet that if you put the output into the input it would create energy and
run forever. What a deal!

Can we get special dispensation to use them on our Teletype gear? My old
Model 15 needs this right away.

Hello--

There once was a young man named Bright
Who could travel much faster than light.
He set out one day
In a relative way
And returned on the previous night.

(With apologies to A. Einstein, I. Asimov, G. Gamow, C. Sagan, and J. Campbell--
or whoever wrote this limerick.)
73,
Brad AA1IP

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General

4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's less than $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

Subject: AudioPhiles Push the Envelope

I work as an audio engineer in the recording and broadcast industry.

I agree with David Brodbeck that a really bad cable will certainly affect the audio quality. But I am always amused at the people who spend hundreds of dollars for a oxygen-free copper wire with gold-plated connectors to go from their CD player to their amp or pre-amp. Before a signal gets from the original microphone to your living room speakers, it has gone through dozens of connectors and patch panels, and literally hundreds, if not thousands, of feet of wire.
I can tell you with some authority, that most of those connectors are not gold-plated, and almost none of that wire is oxygen free.

After that journey, I am not convinced that travelling the last three feet over a $500 cable is going to improve the sound.

Gold is good. It does not corrode and cause poor connections like other
metals do when they have been in service for a few years. I have some
gold plated connectors and some that aren't. The ones that are not,
develop poor connections over time and cause a very noticeable lack of
low frequency coupling. (like it sounds terrible) Wiggle the connector a
bit and it works ok again for awhile. No problem with the gold
connectors.

As far as interconnect cables go, it does make a difference in the sound
with different types of cable. I suspect that the difference is due to
the amount of capacitance the interconnect presents more than anything
else. Not saying it is better or worse, but different. Oxygen free,
silver plated or platinum plated wire, I am not convinced that one
matters. Or $500 cables.

beware of gold. it is not as good as you say it is. About 20 years ago I had a major study as to why parts were falling off of aircraft circuit boards in use on a carrier based in miami - I had electron micrographs of the corroded leads, detailed chemical analysis, all the stuff you'd expect.

The cause was gold plating of the kelvar leads - the electrogalvantic potential of gold to iron is about 2.5 volts - the plating made the leads tiny batteries and they corroded through when dust kept them moist with the miami air.

the solution was to use tin plated leads - only 0.25 volts electrogalvantic potential - but I was not permitted to do this because the parts had to be burned in in an oven first and only the gold leads would stay unoxidized in the high temp oven.

anyway, I would go for tin over gold - a tight connection will actually block al teh air and corrosion will not be an issue.

This is my final answer: If you spend more than $2500 for your entire stereo, your money would be better spent attending live concerts every night of the week. Oh, I suppose some will object that a $10K stereo sounds better than live, but then those same poepl have to surrender their gobbledy-gook about refence-this and authentic-that, won't they?

Subject: AudioPhiles Push the Envelope

The amazing thing I did not realize about the "audiophile" market before I became a ham is that for all the mumbo-jumbo (and it is: Geordi La Forge and Mr. Scot's utterances hold more scienctific creedence in comparison), they are absolutely ingnorant of basic electrical laws and principles (Ohm's Law, the decibel). Variable line-out level control to compensate for the difference between a 3' and a 6' interconnect? The "loss" in the 6' cable must be on the order of <0.01 dB at audio frequencies.

While audiophools will wring their hands and lecture you about each small fraction of a dB, try pointing out to them that Bell's original (and still correct, I believe)

definition of one decibel is the minimum change that is detectable by someone with good hearing. Thus, spending several thousand dollars to realize less than 1 dB gain is a fraud. Too bad there isn't a written technical test required before you can walk into a high-end stereo shop. My answer to these nebbishes is to say: "Show me, on a spectrum analyzer!"

GEE - and *I* thought that actually LISTENING to one in REAL LIFE
situations was the ultimate test. It's certainly the way I bought
MINE - now I guess I'll have to read the technical specs to see if I
am REALLY hearing what I *thought* I've been hearing all this time -
be a SHAME if I have to junk my nice radio because a set of printed
specs NOW tell me it's no good...

That's as ludicrous as the "audio experts" on AM, who spend more time
LOOKING at your received signal on a scope than they do LISTENING to
what you are saying... "Eh, sorry OM, I missed most of your last
transmission because I was busy putting yer signals thru my scope and
spectrum analyzer - could you repeat?"

I have a few of these.
Maybe 4 or 5. I need to dig.
Reply directly to my email.

If one studies wave guide theory, the wave appears to have to travel faster
than the speed of light as it crosses back and forth in the wave guide as it
still comes out at the speed of light. Strange huh? Don't know what that has to
do with this gadget but thought somebody might want something to think about.

Nc183d <nc183d@aol.com> wrote:
>I met Rich recently, and it is true, he is running a business.

Running a business? Dealers are asked to voluntarily reframe from posting business ads to the rec.radio NGs for the simple reason of preventing hundreds if not thousands of daily business-related commercial advertisements which would flood and distroy the usefulness of these *DISCUSSION* groups. Think of the number of electronics and radio dealers across the country who would love to advertise all their products and sales listings, but reframe from doing so out of respect of the established guidelines. We'd be literally buried in ads if they ignored the charters. Even our rec.radio.swap NG, the sales catch-all for the rec.radio.* hierarchy was created with the single-unit buyer/seller in mind; that group, too, would be distroyed if commercial dealers/businesses ignored the voted-on guidelines.

He might consider going through the established newsgroup-creation process and propose something like a biz.radio.sales newsgroup, outside of the rec (recreational) hierarchy. (If such a great were successfully created, it would probably end up being flooded by other dealers and businesses!)

Subject: WTB Collins 30L-1 any condition

I am looking for a Collins 30L-1 amp in any condition (almost). I'm looking for a project amp so I am not really looking for a pristine piece. It doesn't need to be working. On the other hand I don't want one that is water damaged, run over by a fork-truck, cannibalized, or has a burnt out transformer. Other than that, it might fit the bill. If you have such an amp you would be interested in selling, e-mail me with your price and condition / description of the amp.

Thanks

>finals?

Hi Scott - How about that, the old SR-160 was my first SSB rig 27 years ago! Great little tri-bander - had a wonderful time and many great memories with her. For example, never EVER try to remove those 6HF5 finals while the rig is powered up! I touched the B+ and it flipped me over a metal chair. I was out for 1/2 a second and when I came to I was on the floor on my back looking up at the ceiling. Radio playing in the corner like normal.

Dad walks in - sees the radio and then sees me on the floor, legs dangling over the chair on my back looking up at the ceiling.

I tell him "I'm just tuning around on twenty meters". He looks at the SR-160 in the corner and me on the floor. He just turns around and walks out - not saying a word but shaking his head.

Ahh what memories! Traded that old SR-160 for a Galaxy III and now I wished I had them both !!!

OK Scott sorry for that... but some of these old rigs bring a tear to my eye. Many of us have given solid state the heave ho. While tubes are not .50 like they used to be in the 50's, they are not that expensive either. Most of the boatanchors from the 60's used TV sweep tubes. Some like the 6LQ6 and the 8950 have gotten pretty expensive if bought new or from eBay. But they are pretty cheap if you go to a local hamfest or ask around. Went to the OKIE City hamfest 4 years ago and bought a few 6LQ6's for only $5 each. I also bought a dead Swan Cygnet (270B) for $50 for parts. Replaced one little resistor and got it working again.

I now operate daily with that Swan Cygnet (with 15 yr old finals) - Halli SR-400 Hurricane and for CW - a Johnson Viking Navigator XMTR and for RCVR a HQ-One Eighty.

so...I recommend you look for a nice SR-160 and a D-104. Put up a 40M dipole and kickback and enjoy it. Relax about those finals.. you can find them for next to nothing if you look. And if you know how to tune a rig and have a good antenna they should give you many years of good service.

Buy a nice emission tube tester for $25 and prepare a list of replacement tubes you can bring to the hamfests to wheel and deal. You can then go

looking through old boxes UNDER the tables...

Just like the rest of us!

73 - WD0HCO

> If you are going to get boat anchors why not get them for am.

Amplitude Modulation is boat anchor.

SSB is just something any one does.

How about a Viking 1 or Valiant or Ranger and a good boat anchor receiver like a Hammarlund HQ140 or HQ150?

Steve

Just got a Yaesu FTdx560 (thanks to those who helped me out with advice!!) and will be putting it on SSB and CW as soon as I get my upgrade (yup, at least ONE "new" ham who will use CW!!). I'd really like a CW filter and a VFO for the 560. Also, if you have any accessories for the rig, please let me know condix. and price (& shipping, if possible, to NC). I'll be at the June 10 Winston Hamfest if you're local.

73 de Andy KG4GSC

(For those who helped me...unit was "fair" on reception, some intermittants. Tore into the unit last night. Most of the unit was great...except for some "repairs." More cold solder joints and over-flexed leads than a first year community college electronics class!! Heated up the iron, replaced half a dozen caps and resoldered 30 or so connections....and it came right up!! Listened to 80m & 40m for a while (love those guys on 3952!!) and will try 10/15/20m's this weekend. Next trick is to borrow a friend's dummy load and test the transmitter. "Tune for minimum smoke," right?? <<grin>>)

Its a Navy shipboard unit. Comes in a 6' rack and runs or 110 60Hz.
Remote coupler to 26-32' whip. Runs a pair of 4CX250b's, as I recall.
The straight model has 1 Khz tuning, whereas the "B" model will give you
finer resolution. I had 2 of them. They worked...but what beasts!!! I
traded an R-390 a for them. Don't know what they're going for now.

A couple of questions:

What frequencies were the URC32s capable of?
What is the approximate vintage?

I think I remember servicing one of these in the late 50's.
I really liked it. I stayed on the air for over two years
of abuse with only one repair (screen bypass cap that
went short). It took me less than 10 minutes to have it
back on the air.. If this is the unit I remember, it really
outperformed the other manufacturers. The secret seemed
to be ventilation and the 4CX250's....

Sorry about the nostalgia.. Bill

I agree Steve. This is really just an entertaining "popcorn" movie with
ham radio as a plot device rather than a central element. The plot
would have worked just as well with a crystal ball and a lightning storm
as with an ancient Heathkit and the aurora. I watched the credits to
the bitter end: there was no acknowledgment of any technical advice on
amateur radio matters.

2-32 MHz at about 500watts. Someone else was inquiring, also. Maybe they're coming out of the woodwork now. I was a NAVOCEANO civ. on a UNITAS cruise on a DE. We had 3 of them. I understand from some ex-sub sailors that that rig was designed for the sub service, but adopted for skimmers, too. The 1 kHz channel spacing was not good for ham use. I had one straight and one with the modified "B" synthesizer. I ditched (er...found them a good home) mine for $100 each. Maybe I should have kept one?? (Naaa!) 73

At the risk of perpetuating a flame war in an inappropriate newsgroup, Maxim was a leading-edge kind of guy. If he were around today, I'd like to think he'd be hacking DSP code and working PSK31 moonbounce, or something.

If he were still into CW in the year 2000, it'd be a relaxing hobby for him, not a pathological obsession or a hazing ritual. My guess is, ol' H. P. wouldn't be into the whole death-knell-of-ham-radio thing. Someone like that keeps his eyes on the horizon, not the ground.

Good Luck with the New Old rig AND UR Upgrade!!! Glad to see UV taken an interest in CW as it seem to be a dying art these days...Sad really....
As for the Maximum Smoke item, Don't let ALL the Magic Smoke out, the rig needs a little to function correctly!!! :o)

Excellent response John. I find it amusing how these narrow minded,
bigoted, trolling individuals haven't the ability to recognize their total
lack of contribution to amateur radio.

73...

I have the following radio stuff for sale:

Utica 650 6 meter tranceiver w/ external VFO, $150.

Yaesu YO-100 Station Monitor Scope, $135.

Lafayette HE-65 six meter tranciever, $125

Yaesu "Landliner" matching phonepatch/speaker console, $95.

RYCOMM solid state VLF receiver, $150.

Yaesu FT-901DM HF tranceiver, mike, manual, 80-10 Meters, $325.

RCA Radiola antique speaker (larger round original case), as-is,
looks good, $75.

Electrovoice 664 mike w/base, $325.

Hammarlund matching speaker, $75.

All equipment looks nice and works good. If interested call Mike at
(979) 693-1461 or e-mail.............................Mike.

This was posted on the ham radio history list; thought you folks
might enjoy reading it.
73, Jeff KH6O

Construction of radio equipment in a Japanese POW camp.
By Lieutenant Colonel R. G. Wells
Transcript of a recording by Lieutenant Colonel R GWells, on the
construction of radio equipment whilst in a Japanese Prisoner of War camp
after the fall of Singapoore
It was about the beginning of 1942 when I was aprisoner of war of the
Japanese, when I was ordered to go on a working party which eventually
finished up in the Sankakan in British North Borneo. Two thousand odd of us
were in this work party and it wasn't long before we noticed the absence of
information as to the international situation, what was happening in the
outside world, and the whole camp had a real craving to get news by whatever
means. Escape parties were being organised, but none of these were very
successful. The next thing people turned to was a means of getting some
radio news, and this is where the building of a radio set became an urgent
requirement.
The main thing, of course, was that we didn't have any components and
although we had some contacts outside which later on were helpful in the
building of this receiver, it limited our requirement to a regenerative
receiver as from a superheterodyne receiver and the decision to do that was
borne out by the results.
The high frequency spectrum during that time of the war was fairly quite in
that part of the world and the BBC, we hoped, would be able to be received.
This was aided by the fact that the Japanese in their wisdom called a friend
of mine out one evening to repair their radio set and he took the
opportunity, of course, to switch over to the shortwave bands, with
headphones while doing that, and picked up the BBC successfully. That day
was memorable because it was the day that the BBC broadcast the death of the
Duke of Kent in an aircraft crash. That was the only news we had of the
outside world for something like six months.
The plan was made to begin building the radio, so until we could build
components, there was nothing much we could do. A look at the circuit
diagram of a regenerative receiverindicates a number of capacitors - about
two or three are required -low capacitors to make the oscillating part of
the system work, and infact from memory we needed in the grid circuit at
least one ".01 microfarad" capacitor and there was no chance we could get
this anywhere, or any other components. So we hit upon the idea of taking
some tin foil or aluminum foil from the lining of the tea chest from wich
the Japanese suppled with the rice rations, then by the well known equations
for calculating capacity and the relationship of the surface area and

spacing of the plates, we built a capacitor or, at least, I built a capacitor which according to calculations should have been about ".01 microfarad."
If I could put an aside here, I built a replica of this capacitor some years ago, and it went out to Simpson barracks wherewe had some friends in thetesting laboratory, and with great excitement the Warrant Officer concerned said, "We will see how good your calculations were"; so he put it on his equipment which was accurate to many decimal points and read on his display unit, ".009 microfarad", so we thought we were pretty good. I said "Touch" to him because he didn't think we could do it. I made two ro three of these, and I still hae one of them that would work if I built the receiver again, which I have been thinking about doing, except there is always something else, like a lot of other projects which one has as one gets older.
The resistors were another problem. We found out that we could use the impurities in some of the tree wood and the bark, particularly cinnamon bark bark which was available by getting through the wire only about 2 feet and we could normally pinch that while the Japanese sentry was moving around. We used a piece of string with the material rubbed on it from the burning of the cinnamon bark with some impurities in it (we didn'thave a chemical analysis); we weren't very fussed because most grid-leak resistors were about a megohm or thereabouts and we had no means or any way we could measure a megohm, so it was largely a trial and error thing to see if it would work. We made a number of these bits of string and tied them round different things to dry them out to get the thing going. Eventually about an inch, three quarters of an inch to an inch, was about the right order of things to get about a megohm resistance. They were the two main things.
Now the things we couldn't provide, couldn't do. We had to make coils; they were largely trial and error, one could calculate the inductance of these if one had access to some means of measuring the wire gauge and the space between them. So that was largely a trial and error business.
The two biggest components, or two biggest requirements, were we needed some headphones and we needed a valve, and I thought that the rest could be made locally with a bit of luck. On the question of the headpiece an outside contact smuggled in one headphone, which was better than no headphone, and a valve - no valve holder but one can't have everything in this life.
The other trouble was the power supply. The Japanese main around the camp which provided the power was 110 volts roughly according to the power station meter which we couldn't help but see, because we delivered the wood there while the power station was running; I switched over when no one was looking and the frequency was about 60 Hz, not 50 Hz as we thought, not that this worried us anyway but to know that it was manageable.
So two problems remained for the power supply. The first one was the A-battery or low voltage supply necessary for the filament of the valve. We started with a couple of dry cells, but these didn't last very long and we had to make something then. Through being friendly with the pharmacist with the party, we got some potassium bichromate and made up a bichromate cell, which is probably well known in the text books but not of very practical use. It's fairly hungry for zinc and it needs some sulphuric acid which one can't throw around or hide easily, but it served for some time and was quite

successful but, in the end, had the operation lasted very long, we would have been in trouble for that. Two of these cells provided about 3 volts to 4 volts, and 6 volts was a bit too much because each cell was running at a bit over 2 volts, about 2.2 volts.
The biggest problem was a rectifier to rectify the AC into DC without dropping it to a low voltage, because remember in those days we needed high voltages for the B supply, or anode supply, but in these days we bring everything down to small DC voltages; we needed to get them up as high as we could. That was a partial failure in that using aluminium foil again and oxidising one piece of it, or length of it folded over, with some weak acid and then using the two electrodes, one of clear aluminium and one of a zinc salt and aluminium, we could make a rectifier. We wouldn't be so audacious as to call it a rectifier now, because it had a reverse voltage of something like 30 or 40 volts, which wasn't exactly ideal, but for DC we had no option. The result was that I made a bridge rectifier but the only problem was that after 15 minutes the electrolyte began to boil, so it was really passing current in both directions but a little bit more one way than the other. So a single cell, an extra rectifier cell, was the only way I could close this down a bit, and some smoothing. This we achieved with part of a fish plate from the railway line which was being used at the aerodrome to move the dirt from one place to another by man-power, about six men on these, and the odd fish plate used to disappear anyway for various reasons. I dropped one off at the power station and asked the Chinese under my breath if he could cut it into three little sections which he did, he didn't want to know why.
Then again using some palm oil and some bee wire which was in fairly plentiful supply, which we stole - it was a bit risky because the Japanese were cultivating a couple of beehives outside the wire and of course this wire used to disappear for various things unrelated to radio - and we put the palm oil along the wire stretched out and rubbed this palm oil on it, thickening it with a little bit of flour and then heating it; the flour bound the palm oil together and formed a fairly good insulation over the wire. Good, but lucky, and with a lot of travelling.
I should come back to the capacitors on that, because we had to insulate the layers of those which we did by putting a layer of newspaper (a few people had newspaper and various things, for other reasons than newspaper of course, but then we had no other toilet requisites in the party) and by soaking this in some coconut oil we could insulate each layer after we wound it, and with a piece of this bee wire - we had something like fifty feet of it - wound round this part of the fish plate, we made a fairly good choke coil. And then a bigger capacitor, which was no trouble, having had success with the small one, to just wrap as much tin foil as we could round another sheet of newspaper which finished up about 18 inches long by about three quarters of an inch in diameter. We didn't even try to measure the capacitance of it, because we couldn't do anything about it anyway, except put more wire on. And that in effect was a fairly good rectifier, a very dangerous one because we had the
110 all right but we had a bit over that by the time we had rectified it, and we don't know because we had no means of measuring it.
Finally, the valve; we joined the valve by winding the clean little bee wire

around it and then plugging it with any insulating material we could get to make it stick, - no valve holder, of course. So eventually we produced a receiver of sorts, except it wouldn't oscillate. We tried building more, another choke coil, and this went on for ages; there was no possibility we could get this valve to oscillate. I think it's recommended according to a friend of mine who had an amateur licence, he thought that about 120 volts was the best we could get and there was no way we could get that by trying to smooth this any more. So the only avenue open was to bribe one Chinese working at the power station who was very much our way, and of course in those days was a nationalist Chinese. The capital of China in those days was Chungking, and I told him we could get him some overseas news from Chungking if he would slowly wind his field coil power up on the generator every night starting at about 9 o'clock bit by bit, and get it up to about 130 on his meter. He understood, and after that I said half an hour to drop it again, very quietly and slowly because it may affect the lights "....and you no speak about that because you get chopped, you know, and we will give you Chungking news...." This was duly done and for about six months we had reliable communication. The first trial on air had too much hum, and we had to modify a few things two or three times in attempts to get it right, and in the end we had a workable situation which was worth exploring.
Capacitors right, choke coils right, one head phone, we had some old rag so we tied it round the head and tied it on, or string, or whatever we could get. With the hope of recording something we took some paper, which wasn't in plentiful supply, but the odd piece of paper we could get. Running notches down the left hand side, about a quarter to a half inch apart down the paper, and bending it over so that these little pieces stuck up in the air, and in the pitch darkness one could then put the headphones over one's head with eyes looking out for possible interruption by the Japanese - we had some lookouts, or cockatoos as the Australians called them, around the place to warn us at the oncoming of the Japanese - and with great trepidation we heard Big Ben chiming one night. Of course only one of us heard it but we were so full of enthusiasm. It was the BBC all right; it was quite a clear signal but it was somebody talking about growing hops in Kent. This broadcast went on for something like three quarters of an hour without any interruption, but ultimately the signal faded out and I was very annoyed. I was asked the next morning by my senior officer what was the news, and I said "we've got good news; I can't talk here, come this way." So he came along and said "what's this news you're talking about." I said I didn't actually hear any news, and he became very annoyed with me and said what the hell did I mean, and I said "if the British primary producing experts are capable and able to spare the time to talk about growing hops in Kent, Britain must still be alive and floating with their thumbs up, and as far as I'm concerned that's the best news I could hear!"
That's the outline and maybe there are some questions I haven't covered properly.
BJ: The first question I would like to ask you is: What did you have in the way of tools, if any, and how did you connect the components of the wireless without, presumably, a soldering iron?
RGW: No soldering iron, no solder of course, and no other system really available but to twist and wrap with some coconut oil paper, or cardboard or

something, and very gently lift it. It was on a platen of wood we obtained somewhere; it was about a foot by a foot or something, so we just mounted the components on that. A meat skewer on the capacitor - oh, we had a capacitor too, a capacitor, a valve and a headphone, which were external to camp components we had. We didn't have any tools at all, except someone obtained the use of a sledge hammer - for what purpose I don't know because one of those would not be needed to escape; other than cutting up the soft iron of the fish plate which was about the only reason we needed anything, the rest were just twisted wires. We just wanted to get one usable because we didn't know whether it might be blown up or captured; we weren't worried, the main thing was initially a short term aim (as well as a long term aim) that it might last. Fortunately, it lasted for over a year - sixteen months until the arrests took place, but that's another story.
BJ: Can I just ask you - the components for the low voltage battery cells that you produced, where did you get all the components from?
RGW: Well, zinc wasn't hard, there was some sheet zinc lying on the aerodrome and we pinched quite a bit of that because that would be eaten away during the use of the cells for the low voltage. I don't know what would have happened if that ran out. I think someone produced two lantern cells which did for a while, but it was mainly on this home-made cell system, which wasn't efficient but nowhere near as inefficient as the rectifier was. We must have been consuming... Ah Ping said he had to turn up a lot of power to keep the lights what they wanted. We were dispersing such an amount of power in this four test tube rectifier for the high tension. A variable capacitor was another component we had to bring in. We couldn't make a variable capacitor, it was impossible. We had to take two plates off the one we had to get a high enough frequency. Yes, I can't remember why we didn't go up a bit in inductance; it was largely a trial and error business really. Except that in a regenerative receiver you had some idea when you were near a station because the receiver was so sensitive as all regenerative receivers are. It had a piece of meat skewer type wood which I had a hole drilled in by a pen-knife, and we glued this in with some of our glue or something, into the capacitor shaft so that we could tune it by holding a little stick across it, fixing it at about six inches because one couldn't get one's hands any closer to the set because it was in a state of very near oscillation where the maximum sensitivity is, just before it bursts into oscillation. With a fairly clear HF band, it wasn't long before we knew roughly, by putting a couple of marks on the stick, where it was. We knew that the Voice of America was due for a transmission and Idon't think we ever knew the frequencies because the BBC didn't announce frequencies, they just came on the air and broadcast.
BJ: What did you use for an aerial?
RGW: A clothes line. All the huts had a clothes line of some sort so we just took a thin wire from that and wrapped it round the edge, knowing that a normal sentry wouldn't take any notice of it, and we just dragged that across the side of the hut and brought it in, and the people with our permission would put their loin cloths out and hang them over this when they washed them so it looked as if it was being used. The toilet in the sleeping block was a hole in the ground and it was verboten to be used by anybody except to put our radio set in when it wasn't in use; everybody respected

our wishes in that regard!
I think the best thrill was, well two or three thrills, which were momentous I suppose and of great excitement, almost excitement of crying with excitement, and the first was I think when we heard a full news bulletin of something like 400 aircraft over Dresden or somewhere, pounding the place to pieces; we were very pleased about all this. But from the land point of view, from the beginning of '42 I think, I can't remember, but sometime just before the Battle of Alamein, and we heard some of the troop movements in preparation for that. The bulletins in those days were fairly long and gave a lot of detail.
Unfortunately the first lot of rectifiers blew up about 2 days after this so we were out of business for something like 5 or 6 weeks. Of course, the rumours started to flood in as to what was happening, what wasn't happening, the war would be over in 5 minutes and all these mainly optimistic things; but there were a few super-pessimists who said we would never get off the island, and would die there, and that sort of thing. But the thrill, I think, was when reception was restored again and we had to do another little bit of fine tuning because everything you changed seemed to affect something else; the whole thing was very sensitive and wouldn't have stood up to present day quality assurance bump tests!
So back there on the first night we missed the BBC for some reason, and the next thing was the Voice of America which had a headline which ran something like this: "The war is over in North Africa, Rommel is knocked to pieces, he's out of the Middle East and the Middle East is finished, the future for this and that ....." That was the end of the American news in about three sentences! No other detail, so I said we would go back at about 12.30, and hope that Ah Ping hadn't pulled the voltage down too far, to see what we could hear. Again, the BBC was a little low but it suddenly came quite bright and lifted in volume, and Big Ben chimed again and there was a voice in the wilderness calling. It was a lovely sensation to hear Big Ben playing in those days, and every time I hear it now I become excited. The announcement, initially in a most depressing vein, described all about the 8th Army's movements, and it was here that it did this, and this regiment drew up and did that, on and on this went for something like 15 to 20 minutes, and we tried not to follow it because we had our eyes on too many other things, look-outs and so on. But a lovely flow of English and if you had a tracing board you could have traced out exactly where everything was in situ, but of course that wasn't the aim of our exercise which was to get news. At the finish of the news the polite sentence said "It must be considered now that as all resistance in North Africa has been overcome the Allies victory must be "assured" or something like that. And that was all he said, but he took a few minutes to describe everything that happened, so you had a clear picture. But the Americans seemed to be creating for a public that just wanted the headlines, three headlines and that was all; no other interest in anything else. That was one of the happy moments of the system.
We had the problem, of course, of writing the news because naturally a lot of people wanted to know it and a lot of people could be told it without its origin. This is why we used the piece of paper we took with us (Gordon Waite and the other officer who used to share some of the work), and as soon as we heard about 30 bombers over Dresden or something, you just put 30 BD, or B

for Berlin, and feel the paper down when you felt it coming to the end, and pick up the next little bit of bend and write along that in the pitch dark, hoping that you've got something in the morning. Surprising how legible it was, just triggered a couple of words like that. Unfortunately, I was in deep custodianship with the Kempitai when the Atom Bombs were dropped and I didn't hear that news on the BBC; it was relayed to me. We didn't keep these things, of course.

Getting off the technical side now, the radio set didn't betray itself. Some criticism could be levelled at us I suppose. We trusted too many people; we had no intelligence training then, of course, or anything like that and we were inclined to trust every Asian we met who smiled at us and who said he was one of us. Anyway, while this was going on at the aerodrome and once the troops heard, we had to tell the troops the good news of course. We said we had heard from an unknown source that the war is getting better, or something like that - we had to give them a sanitised version. It was probably all they wanted but, naturally, two or three senior officers wanted to know as much as they could because they may be the ones who would have to take some decisions one day about it.

Unknown to us an Indian - I don't like saying this and I'm not being racist, it could have been any nationality - blackmailed a Chinese who was helping us on the aerodrome picking up bits of iron for us and various other things. He blackmailed him but the Chinese wouldn't talk, so the Kempitai arrested the Chinese and put him on a rack; he mentioned in the course of his cries for help - which was not a nice thing to think about but I don't blame him - he mentioned Captain Matthews and a couple of other people; I think I would have done the same thing at that stage.

The Japanese then decided to make a raid on the camp, which they did, and I was then charged and taken away by the Captain; he wanted the receiver and I gave it to him in the end after a lot of leading him round the camp with his soldiers. I could almost laugh at some of the things that happened. He must have told them he was looking for a radio set; a Jap soldier came running up to him with a piece of metal which looked like a piece of horse harness or something; the Captain almost kicked him and told him what to do. So in the end I decided that I couldn't talk to anybody before the rest of the troops on this parade ground, and I felt so conspicuous. He walked back and said "Are you going to tell me because we want the wireless set?", so I said "Yes, I've just thought where it might be". So I went across and told him where the hole was, and they dug the hole up and, of course, there was the transmitter. He said "Ah, you've been sensible at last", so he took the transmitter and they took it away.

>From that day on, I was worried about this because I knew the receiver was OK and the troops would be happy about that; they would still be able to get news. And then he took me up to the platform where he stood and addressed everyone. All he said in English was "You all look at this man, you will never see him again" and led me off. I had a sort of a dying wish, going in on the vehicle to Sandakan to be interrogated, that somehow or other this set could be preserved and, of course unknown to me, it was. They continued using it but not until after about a week or so - their nerves were a bit shaken. But they used it for some months afterwards until the big moves came and it was a successful source of morale lifter.

During the trial, that was when the shock came to me when this transmitter was brought out by the prosecution as evidence that we had been using a receiver, but the Court accepted it. It was never mentioned after that because had it been, I don't think either of us would have been alive, because we had planned to get some crystals from the Philippines and try and fit them in this set then we could call them on CW and give them some news about ourselves. But we did get some news by other means, via an agent taking a sandalwood vessel across, that the British and Australian authorities knew where we were, and it was proved at the end of the war that they knew exactly where to come for us. They had guerilla parties in behind the lines, but they couldn't contact us and they had to watch some of our people just die virtually, because they were there and there would have been trouble otherwise.
BJ: Could I just take you back and ask you to fill in a few details about the transmitter. You talked a lot about the construction of the receiver and I would be very interested to know where the transmitter fitted in to this; were you developing that alongside?"
RGW: "No, the receiver first; we had that, and then we started the transmitter as a rather low priority of course, but one it would be nice to have. I had finished the two 6L6G's to make a push-pull amplifier that was the RF output to be, and the oscillator, and we had the capacitor but were missing a few more components andthat was about where we were. In other words, in the course of events, had he been an expert with some sort of knowledge of electrical engineering, we would never have got away with two 6L6's sitting up on a block of wood with a few capacitors and things hanging on them, but obviously the Court Martial officers were normal, without disrespect to Infantry Officers, and they had no knowledge of telecommunications.
BJ: Again, the valves you used in the receiver were...?
RGW: Only one, that's all we had, which was brought in by Mr Mabey. He smuggled in a pipe to me, a smoking pipe, with some tobacco. Lovely gentleman. Unfortunately, I never had long with him, he died soon after being arrested. His widow lived at Hove with her sister; the two are deceased now.
End of recording.

If all else fails, use the large red and black plug-in/screw-on
terminals like on DC power supplys. Mount on small piece of
plexiglas.

I beg your pardon OM, were you referring to my followup?

I posted a response in jest (that's amusment to you). May I also
suggest you consult your Webster's for the definition of narrow-minded
and bigoted of which neither word applies to anything discussed. The
original post in this thread was written by WB9GKZ <wb9gkz@aol.com> to
elicit amusing responses and nothing else.

I do agree that H.P.M. was a man ahead of his time and a great visionary
as were others in his family.

I posted that on rec.radio.amateur.homebrew newsgroup a year ago thinking it ought to really spur some interest in bare essentials homebrewing---nobody thought anything of it. It was originally posted at: http://chide.bournemouth.ac.uk/people/r.g.wells.html and was a link from: http://chide.bournemouth.ac.uk/ but they have taken it down.

I am looking for another web site that had the schematic and working model of the canteen radio that was built in a Japanese POW camp in the Philippines. I didn't bookmark it and after doing a search to relocate it I get the feeling that the web site has been removed.

I really would like to learn about the other camp radios and spy sets that were built and used but information seems to be non-existent. I saw some of the radios at the Dayton Air Force Museum back in the late 70's and I am sure more information is available but it is probably tucked away.

Yep, you heard Jim correctly. Most US military HF gear is USB, such as the GRC-106, PRC-74 and PRC-47. Most of it also does not go very high, such as the PRC-47 above that stops at 12 Mhz, so a 40 Meter USB net was in order.

Hi and thanks for reading this.

For Sale: Just in time for the upcoming VHF Sweepstakes!

Yaesu FT726R, VHF/UHF transceiver.

The radio has a built in AC supply, will run off 12 volts, and puts out 10W on all bands. Includes SSB, CW and FM. 10 memories, repeater offsets, full duplex, scan functions, IF shift, etc. This radio is in near mint (I would consider it a 9+) condition and includes the following accessories:

6M Module
2M Module
430-440 Module
Satellite Duplexer
CW Filter
Manual
Service Manual

Asking $700.00 or best offer, complete with all accessories. Sorry, I will not break up the
package!

Source record: 67141

The Hamurland and Johnson are good rugged choices. Look for rigs with 6146 finals. There are a lot of these tubes around and are still pretty cheap. The 6CL6 oscilator/drivers are still easy to find also. These tubes were used in a lot of the commercial two-way radios so they should be around for quite a while. I would stay away from rigs with TV sweep tubes. Many of the circuits they were used in are pushed to the limits and the tubes are getting hard to find. These tubes were not designed to be HF RF TX tubes. The 6146s were designed specifically for RF application.

Would anyone know the mod to get this thing going on 160M? I have a '30's version that I would like to put on there. I think it's got something to do with adding extra inductance to it's coils. Also, would 160M coils from a BC-610 work on this model?
I know of a fellow or two that had it done to his '50's vintage model. I have one I currently use on amplitude compandered sideband with a homebrew adapter. I use a B&W product detector I rigged up to it's two IF's. I use it strictly on 75 meter phone (I know it's bandwidth is rather wide)
Old H.P. Maxim really know his stuff when he came out with this thing! It sounds even better than a CE-100V!

There is a military museum, not especially big, in Bayeux, Normandy, with one or two POW camp radios. Nothing in the museum impressed me more than these sets. Also, there was one or two in the military museum in Paris. The descriptions in the museums may have been in French and I didn't understand completely. I remember that one radio had been built mostly of salvaged portions of an aircraft radio.

Back when...I sold parts at an industrial parts house in NJ. We sold stuff by a company called Datak for doing panels, letters, meter scales, etc. I've hunted high and low, and all I can find is Datak PC board stuff, but none of the other stuff.

I need to re-label a panel on a radio. And make a custom meter scale. I seem to recall Datak had all of the above.

But beyond that, anybody have any suggestions for custom meter face/scale?

This all for a SWAN 240 I added an "S" meter to and in the process had to go from the 400MA meter in it to a 1MA and a PA cathode shunt to ground.

There is a real nice Type N 150 watt load on Ebay. You might want to
take a look at :

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewItem&item=321032504

What caught my eye, is that it is fully characterized with a return
loss plot. Very nice. 73's.

Hi George:

If you are handy with a computer, or know a friend that is, you can do everything you need with a computer.

There are actualy a number of possibilities. You can make a meter scale with a CAD program and after everything is just right, print it out on a glossy photo stock paper which ink jet printers can utilize. The resulting prints are gorgeous. Some fellow made a scale for a meter and I got it from him by e-mail. He had purchased a CAD program for about $20 and I also bought that program. The scales can be changed to whatever you want to use by just replacing the numbers and the name. Works great. Previously, I just took an existing meter and replaced the numbers with new numbers cut out and pasted on the existing numbers - then photocopied the face. Presto.

Computers can also print nice decals. I just built a clone of the old one tube Ameco AC-1. The original had a wonderful oval yellow "Ameco" logo with lighting bolts above and below. I made the decal by simply using a drawing program and finding a lighting symbol. After printing it out, I covered the front and back with clear mailing tape (the 1.5 inch or so wide stuff). This protects the label and provides the same tension front and back. Then I cut the oval out and pasted it on the clone. It has the same shininess as an original decal. It is the center of attention of the rig.

Another method can be used - especially for logging numbers around knobs. You create the numbers with a CAD program or a drawing program. Then, use an ALPS printer. The ALPS printer is like an ink jet printer, but it uses a film rather than ink. You then purchase 8.5 x 10 decal paper and print onto that. The advantage of this printer is that it does not rub off like ink jet stuff. In addition, the film is available in white, gold or platinum - in addition to all the normal colors. So, if I need white printing on a black front panel, I can do it.

Otherwise, you can use the decal paper with an ink jet and if you expect wear, cover the printing with the wide mailing tape.

Have fun.

73, Colin K7FM

At the risk of perpetuating a flame war in an inappropriate newsgroup,
Maxim was a leading-edge kind of guy. If he were around today, I'd like
to think he'd be hacking DSP code and working PSK31 moonbounce, or
something.

If he were still into CW in the year 2000, it'd be a relaxing hobby for
him, not a pathological obsession or a hazing ritual. My guess is, ol'
H. P. wouldn't be into the whole death-knell-of-ham-radio thing.
Someone like that keeps his eyes on the horizon, not the ground.

Excellent response John. I find it amusing how these narrow minded,
bigoted, trolling individuals haven't the ability to recognize their total
lack of contribution to amateur radio.

I beg your pardon OM, were you referring to my followup?

I posted a response in jest (that's amusment to you). May I also
suggest you consult your Webster's for the definition of narrow-minded
and bigoted of which neither word applies to anything discussed. The
original post in this thread was written by WB9GKZ to
elicit amusing responses and nothing else.

I do agree that H.P.M. was a man ahead of his time and a great visionary
as were others in his family.

From: W-A-S-P@exhjinc.net
Subject: ,,~~Advice For New Immigrants~~...

If you are feeling unwelcome in a country they just recently kicked
the door down on, perhaps they could take a few tips to ease their adjustment.

And a few social tips:

1. Understand you are in a foreign country, probably illegally. The
language barrier is of your own making and is not a responsiblity of the
host country.

2. Stop complaining. No one owes you anything, and the freeloader and
whiner rolls are already full. Remember that you would not remain here
unless the situation was much better than at home.

3. Expect that most people you meet will honor your culture, traditions and
laws only to the extent that you honor theirs. Understand too that illegal
immigrants come from the back of the line in their own country and their
presence causes a burden on the social and economic resources of the
communities they settle in. Since many of you are poor and unskilled, you
wind up on the welfare rolls. Those who do pay naturally resent your hands
in their pockets. Many workers, especially in the construction industry,
have been displaced since your arrival.

4. No nation is morally or legally obligated to accept another nation's
underclass. Therefore, since legal immigration is a privilege, it is best
to be grateful. And since illegal immigration is a crime, it is wise to
stop demanding all the time.

Which leads last to point #5;

5. Obey the immigration laws of the country one currently finds oneself.

Of course, compliance with #5 would eliminate the problem altogether since
most of those who are complaining of feeling unwelcome would have to leave.

Only in America!

Subject: Beautiful 150 Watt Load on E bay

There is a real nice Type N 150 watt load on Ebay. You might want to
take a look at :

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewItem&item=321032504

What caught my eye, is that it is fully characterized with a return
loss plot. Very nice. 73's.

> If you are going to get boat anchors why not get them for am.

Amplitude Modulation is boat anchor.

SSB is just something any one does.

How about a Viking 1 or Valiant or Ranger and a good boat anchor receiver like a
Hammarlund HQ140 or HQ150?

Hi Scott - How about that, the old SR-160 was my first SSB rig 27 years ago!
Great little tri-bander - had a wonderful time and many great memories with

her. For example, never EVER try to remove those 6HF5 finals while the rig is powered up! I touched the B+ and it flipped me over a metal chair. I was out for 1/2 a second and when I came to I was on the floor on my back looking up at the ceiling. Radio playing in the corner like normal.

Dad walks in - sees the radio and then sees me on the floor, legs dangling over the chair on my back looking up at the ceiling.

I tell him "I'm just tuning around on twenty meters". He looks at the SR-160 in the corner and me on the floor. He just turns around and walks out - not saying a word but shaking his head.

Ahh what memories! Traded that old SR-160 for a Galaxy III and now I wished I had them both !!!

OK Scott sorry for that... but some of these old rigs bring a tear to my eye. Many of us have given solid state the heave ho. While tubes are not .50 like they used to be in the 50's, they are not that expensive either. Most of the boatanchors from the 60's used TV sweep tubes. Some like the 6LQ6 and the 8950 have gotten pretty expensive if bought new or from eBay. But they are pretty cheap if you go to a local hamfest or ask around. Went to the OKIE City hamfest 4 years ago and bought a few 6LQ6's for only $5 each. I also bought a dead Swan Cygnet (270B) for $50 for parts. Replaced one little resistor and got it working again.

I now operate daily with that Swan Cygnet (with 15 yr old finals) - Halli SR-400 Hurricane and for CW - a Johnson Viking Navigator XMTR and for RCVR a HQ-One Eighty.

so...I recommend you look for a nice SR-160 and a D-104. Put up a 40M dipole and kickback and enjoy it. Relax about those finals.. you can find them for next to nothing if you look. And if you know how to tune a rig and have a good antenna they should give you many years of good service.

Buy a nice emission tube tester for $25 and prepare a list of replacement tubes you can bring to the hamfests to wheel and deal. You can then go looking through old boxes UNDER the tables...

Just like the rest of us!

Subject: Boatanchor question

The Hamurland and Johnson are good rugged choices. Look for rigs with 6146 finals. There are a lot of these tubes around and are still pretty cheap. The 6CL6 oscilator/drivers are still easy to find also. These tubes were used in a lot of the commercial two-way radios so they should be around for quite a while. I would stay away from rigs with TV sweep tubes. Many of the circuits they were used in are pushed to the limits and the tubes are getting hard to find. These tubes were not designed to be HF RF TX tubes. The 6146s were designed specifically for RF application.

Its a Navy shipboard unit. Comes in a 6' rack and runs or 110 60Hz.
Remote coupler to 26-32' whip. Runs a pair of 4CX250b's, as I recall.
The straight model has 1 Khz tuning, whereas the "B" model will give you
finer resolution. I had 2 of them. They worked...but what beasts!!! I
traded an R-390 a for them. Don't know what they're going for now.

A couple of questions:

What frequencies were the URC32s capable of?
What is the approximate vintage?

I think I remember servicing one of these in the late 50's.
I really liked it. I stayed on the air for over two years
of abuse with only one repair (screen bypass cap that
went short). It took me less than 10 minutes to have it
back on the air.. If this is the unit I remember, it really
outperformed the other manufacturers. The secret seemed
to be ventilation and the 4CX250's....

Sorry about the nostalgia.. Bill

2-32 MHz at about 500watts. Someone else was inquiring, also. Maybe
they're coming out of the woodwork now. I was a NAVOCEANO civ. on a
UNITAS cruise on a DE. We had 3 of them. I understand from some ex-sub
sailors that that rig was designed for the sub service, but adopted for
skimmers, too. The 1 kHz channel spacing was not good for ham use. I
had one straight and one with the modified "B" synthesizer. I ditched
(er...found them a good home) mine for $100 each. Maybe I should have
kept one?? (Naaa!) 73

Subject: First-hand account: POW Radio

This was posted on the ham radio history list; thought you folks
might enjoy reading it.
73, Jeff KH6O

Construction of radio equipment in a Japanese POW camp.
By Lieutenant Colonel R. G. Wells
Transcript of a recording by Lieutenant Colonel R GWells, on the
construction of radio equipment whilst in a Japanese Prisoner of War camp
after the fall of Singapoore
It was about the beginning of 1942 when I was aprisoner of war of the
Japanese, when I was ordered to go on a working party which eventually
finished up in the Sankakan in British North Borneo. Two thousand odd of us
were in this work party and it wasn't long before we noticed the absence of
information as to the international situation, what was happening in the
outside world, and the whole camp had a real craving to get news by whatever
means. Escape parties were being organised, but none of these were very
successful. The next thing people turned to was a means of getting some
radio news, and this is where the building of a radio set became an urgent
requirement.
The main thing, of course, was that we didn't have any components and
although we had some contacts outside which later on were helpful in the
building of this receiver, it limited our requirement to a regenerative
receiver as from a superheterodyne receiver and the decision to do that was
borne out by the results.
The high frequency spectrum during that time of the war was fairly quite in
that part of the world and the BBC, we hoped, would be able to be received.
This was aided by the fact that the Japanese in their wisdom called a friend
of mine out one evening to repair their radio set and he took the
opportunity, of course, to switch over to the shortwave bands, with
headphones while doing that, and picked up the BBC successfully. That day
was memorable because it was the day that the BBC broadcast the death of the
Duke of Kent in an aircraft crash. That was the only news we had of the
outside world for something like six months.
The plan was made to begin building the radio, so until we could build
components, there was nothing much we could do. A look at the circuit
diagram of a regenerative receiverindicates a number of capacitors - about
two or three are required -low capacitors to make the oscillating part of
the system work, and infact from memory we needed in the grid circuit at
least one ".01 microfarad" capacitor and there was no chance we could get
this anywhere, or any other components. So we hit upon the idea of taking
some tin foil or aluminum foil from the lining of the tea chest from wich
the Japanese suppled with the rice rations, then by the well known equations
for calculating capacity and the relationship of the surface area and
spacing of the plates, we built a capacitor or, at least, I built a
capacitor which according to calculations should have been about ".01
microfarad."
If I could put an aside here, I built a replica of this capacitor some years
ago, and it went out to Simpson barracks wherewe had some friends in
thetesting laboratory, and with great excitement the Warrant Officer

concerned said, "We will see how good your calculations were"; so he put it on his equipment which was accurate to many decimal points and read on his display unit, ".009 microfarad", so we thought we were pretty good. I said "Touch" to him because he didn't think we could do it. I made two ro three of these, and I still hae one of them that would work if I built the receiver again, which I have been thinking about doing, except there is always something else, like a lot of other projects which one has as one gets older.

The resistors were another problem. We found out that we could use the impurities in some of the tree wood and the bark, particularly cinnamon bark bark which was available by getting through the wire only about 2 feet and we could normally pinch that while the Japanese sentry was moving around. We used a piece of string with the material rubbed on it from the burning of the cinnamon bark with some impurities in it (we didn'thave a chemical analysis); we weren't very fussed because most grid-leak resistors were about a megohm or thereabouts and we had no means or any way we could measure a megohm, so it was largely a trial and error thing to see if it would work. We made a number of these bits of string and tied them round different things to dry them out to get the thing going. Eventually about an inch, three quarters of an inch to an inch, was about the right order of things to get about a megohm resistance. They were the two main things.

Now the things we couldn't provide, couldn't do. We had to make coils; they were largely trial and error, one could calculate the inductance of these if one had access to some means of measuring the wire gauge and the space between them. So that was largely a trial and error business.

The two biggest components, or two biggest requirements, were we needed some headphones and we needed a valve, and I thought that the rest could be made locally with a bit of luck. On the question of the headpiece an outside contact smuggled in one headphone, which was better than no headphone, and a valve - no valve holder but one can't have everything in this life.

The other trouble was the power supply. The Japanese main around the camp which provided the power was 110 volts roughly according to the power station meter which we couldn't help but see, because we delivered the wood there while the power station was running; I switched over when no one was looking and the frequency was about 60 Hz, not 50 Hz as we thought, not that this worried us anyway but to know that it was manageable.

So two problems remained for the power supply. The first one was the A-battery or low voltage supply necessary for the filament of the valve. We started with a couple of dry cells, but these didn't last very long and we had to make something then. Through being friendly with the pharmacist with the party, we got some potassium bichromate and made up a bichromate cell, which is probably well known in the text books but not of very practical use. It's fairly hungry for zinc and it needs some sulphuric acid which one can't throw around or hide easily, but it served for some time and was quite successful but, in the end, had the operation lasted very long, we would have been in trouble for that. Two of these cells provided about 3 volts to 4 volts, and 6 volts was a bit too much because each cell was running at a bit over 2 volts, about 2.2 volts.

The biggest problem was a rectifier to rectify the AC into DC without dropping it to a low voltage, because remember in those days we needed high

voltages for the B supply, or anode supply, but in these days we bring everything down to small DC voltages; we needed to get them up as high as we could. That was a partial failure in that using aluminium foil again and oxidising one piece of it, or length of it folded over, with some weak acid and then using the two electrodes, one of clear aluminium and one of a zinc salt and aluminium, we could make a rectifier. We wouldn't be so audacious as to call it a rectifier now, because it had a reverse voltage of something like 30 or 40 volts, which wasn't exactly ideal, but for DC we had no option. The result was that I made a bridge rectifier but the only problem was that after 15 minutes the electrolyte began to boil, so it was really passing current in both directions but a little bit more one way than the other. So a single cell, an extra rectifier cell, was the only way I could close this down a bit, and some smoothing. This we achieved with part of a fish plate from the railway line which was being used at the aerodrome to move the dirt from one place to another by man-power, about six men on these, and the odd fish plate used to disappear anyway for various reasons. I dropped one off at the power station and asked the Chinese under my breath if he could cut it into three little sections which he did, he didn't want to know why.

Then again using some palm oil and some bee wire which was in fairly plentiful supply, which we stole - it was a bit risky because the Japanese were cultivating a couple of beehives outside the wire and of course this wire used to disappear for various things unrelated to radio - and we put the palm oil along the wire stretched out and rubbed this palm oil on it, thickening it with a little bit of flour and then heating it; the flour bound the palm oil together and formed a fairly good insulation over the wire. Good, but lucky, and with a lot of travelling.

I should come back to the capacitors on that, because we had to insulate the layers of those which we did by putting a layer of newspaper (a few people had newspaper and various things, for other reasons than newspaper of course, but then we had no other toilet requisites in the party) and by soaking this in some coconut oil we could insulate each layer after we wound it, and with a piece of this bee wire - we had something like fifty feet of it - wound round this part of the fish plate, we made a fairly good choke coil. And then a bigger capacitor, which was no trouble, having had success with the small one, to just wrap as much tin foil as we could round another sheet of newspaper which finished up about 18 inches long by about three quarters of an inch in diameter. We didn't even try to measure the capacitance of it, because we couldn't do anything about it anyway, except put more wire on. And that in effect was a fairly good rectifier, a very dangerous one because we had the

110 all right but we had a bit over that by the time we had rectified it, and we don't know because we had no means of measuring it.

Finally, the valve; we joined the valve by winding the clean little bee wire around it and then plugging it with any insulating material we could get to make it stick, - no valve holder, of course. So eventually we produced a receiver of sorts, except it wouldn't oscillate. We tried building more, another choke coil, and this went on for ages; there was no possibility we could get this valve to oscillate. I think it's recommended according to a friend of mine who had an amateur licence, he thought that about 120 volts

was the best we could get and there was no way we could get that by trying to smooth this any more. So the only avenue open was to bribe one Chinese working at the power station who was very much our way, and of course in those days was a nationalist Chinese. The capital of China in those days was Chungking, and I told him we could get him some overseas news from Chungking if he would slowly wind his field coil power up on the generator every night starting at about 9 o'clock bit by bit, and get it up to about 130 on his meter. He understood, and after that I said half an hour to drop it again, very quietly and slowly because it may affect the lights "....and you no speak about that because you get chopped, you know, and we will give you Chungking news...." This was duly done and for about six months we had reliable communication. The first trial on air had too much hum, and we had to modify a few things two or three times in attempts to get it right, and in the end we had a workable situation which was worth exploring.
Capacitors right, choke coils right, one head phone, we had some old rag so we tied it round the head and tied it on, or string, or whatever we could get. With the hope of recording something we took some paper, which wasn't in plentiful supply, but the odd piece of paper we could get. Running notches down the left hand side, about a quarter to a half inch apart down the paper, and bending it over so that these little pieces stuck up in the air, and in the pitch darkness one could then put the headphones over one's head with eyes looking out for possible interruption by the Japanese - we had some lookouts, or cockatoos as the Australians called them, around the place to warn us at the oncoming of the Japanese - and with great trepidation we heard Big Ben chiming one night. Of course only one of us heard it but we were so full of enthusiasm. It was the BBC all right; it was quite a clear signal but it was somebody talking about growing hops in Kent. This broadcast went on for something like three quarters of an hour without any interruption, but ultimately the signal faded out and I was very annoyed. I was asked the next morning by my senior officer what was the news, and I said "we've got good news; I can't talk here, come this way." So he came along and said "what's this news you're talking about." I said I didn't actually hear any news, and he became very annoyed with me and said what the hell did I mean, and I said "if the British primary producing experts are capable and able to spare the time to talk about growing hops in Kent, Britain must still be alive and floating with their thumbs up, and as far as I'm concerned that's the best news I could hear!"
That's the outline and maybe there are some questions I haven't covered properly.
BJ: The first question I would like to ask you is: What did you have in the way of tools, if any, and how did you connect the components of the wireless without, presumably, a soldering iron?
RGW: No soldering iron, no solder of course, and no other system really available but to twist and wrap with some coconut oil paper, or cardboard or something, and very gently lift it. It was on a platen of wood we obtained somewhere; it was about a foot by a foot or something, so we just mounted the components on that. A meat skewer on the capacitor - oh, we had a capacitor too, a capacitor, a valve and a headphone, which were external to camp components we had. We didn't have any tools at all, except someone obtained the use of a sledge hammer - for what purpose I don't know because

one of those would not be needed to escape; other than cutting up the soft iron of the fish plate which was about the only reason we needed anything, the rest were just twisted wires. We just wanted to get one usable because we didn't know whether it might be blown up or captured; we weren't worried, the main thing was initially a short term aim (as well as a long term aim) that it might last. Fortunately, it lasted for over a year - sixteen months until the arrests took place, but that's another story.
BJ: Can I just ask you - the components for the low voltage battery cells that you produced, where did you get all the components from?
RGW: Well, zinc wasn't hard, there was some sheet zinc lying on the aerodrome and we pinched quite a bit of that because that would be eaten away during the use of the cells for the low voltage. I don't know what would have happened if that ran out. I think someone produced two lantern cells which did for a while, but it was mainly on this home-made cell system, which wasn't efficient but nowhere near as inefficient as the rectifier was. We must have been consuming... Ah Ping said he had to turn up a lot of power to keep the lights what they wanted. We were dispersing such an amount of power in this four test tube rectifier for the high tension.
A variable capacitor was another component we had to bring in. We couldn't make a variable capacitor, it was impossible. We had to take two plates off the one we had to get a high enough frequency. Yes, I can't remember why we didn't go up a bit in inductance; it was largely a trial and error business really. Except that in a regenerative receiver you had some idea when you were near a station because the receiver was so sensitive as all regenerative receivers are. It had a piece of meat skewer type wood which I had a hole drilled in by a pen-knife, and we glued this in with some of our glue or something, into the capacitor shaft so that we could tune it by holding a little stick across it, fixing it at about six inches because one couldn't get one's hands any closer to the set because it was in a state of very near oscillation where the maximum sensitivity is, just before it bursts into oscillation. With a fairly clear HF band, it wasn't long before we knew roughly, by putting a couple of marks on the stick, where it was. We knew that the Voice of America was due for a transmission and Idon't think we ever knew the frequencies because the BBC didn't announce frequencies, they just came on the air and broadcast.
BJ: What did you use for an aerial?
RGW: A clothes line. All the huts had a clothes line of some sort so we just took a thin wire from that and wrapped it round the edge, knowing that a normal sentry wouldn't take any notice of it, and we just dragged that across the side of the hut and brought it in, and the people with our permission would put their loin cloths out and hang them over this when they washed them so it looked as if it was being used. The toilet in the sleeping block was a hole in the ground and it was verboten to be used by anybody except to put our radio set in when it wasn't in use; everybody respected our wishes in that regard!
I think the best thrill was, well two or three thrills, which were momentous I suppose and of great excitement, almost excitement of crying with excitement, and the first was I think when we heard a full news bulletin of something like 400 aircraft over Dresden or somewhere, pounding the place to pieces; we were very pleased about all this. But from the land point of

view, from the beginning of '42 I think, I can't remember, but sometime just before the Battle of Alamein, and we heard some of the troop movements in preparation for that. The bulletins in those days were fairly long and gave a lot of detail.
Unfortunately the first lot of rectifiers blew up about 2 days after this so we were out of business for something like 5 or 6 weeks. Of course, the rumours started to flood in as to what was happening, what wasn't happening, the war would be over in 5 minutes and all these mainly optimistic things; but there were a few super-pessimists who said we would never get off the island, and would die there, and that sort of thing. But the thrill, I think, was when reception was restored again and we had to do another little bit of fine tuning because everything you changed seemed to affect something else; the whole thing was very sensitive and wouldn't have stood up to present day quality assurance bump tests!
So back there on the first night we missed the BBC for some reason, and the next thing was the Voice of America which had a headline which ran something like this: "The war is over in North Africa, Rommel is knocked to pieces, he's out of the Middle East and the Middle East is finished, the future for this and that ....." That was the end of the American news in about three sentences! No other detail, so I said we would go back at about 12.30, and hope that Ah Ping hadn't pulled the voltage down too far, to see what we could hear. Again, the BBC was a little low but it suddenly came quite bright and lifted in volume, and Big Ben chimed again and there was a voice in the wilderness calling. It was a lovely sensation to hear Big Ben playing in those days, and every time I hear it now I become excited. The announcement, initially in a most depressing vein, described all about the 8th Army's movements, and it was here that it did this, and this regiment drew up and did that, on and on this went for something like 15 to 20 minutes, and we tried not to follow it because we had our eyes on too many other things, look-outs and so on. But a lovely flow of English and if you had a tracing board you could have traced out exactly where everything was in situ, but of course that wasn't the aim of our exercise which was to get news. At the finish of the news the polite sentence said "It must be considered now that as all resistance in North Africa has been overcome the Allies victory must be "assured" or something like that. And that was all he said, but he took a few minutes to describe everything that happened, so you had a clear picture. But the Americans seemed to be creating for a public that just wanted the headlines, three headlines and that was all; no other interest in anything else. That was one of the happy moments of the system.
We had the problem, of course, of writing the news because naturally a lot of people wanted to know it and a lot of people could be told it without its origin. This is why we used the piece of paper we took with us (Gordon Waite and the other officer who used to share some of the work), and as soon as we heard about 30 bombers over Dresden or something, you just put 30 BD, or B for Berlin, and feel the paper down when you felt it coming to the end, and pick up the next little bit of bend and write along that in the pitch dark, hoping that you've got something in the morning. Surprising how legible it was, just triggered a couple of words like that. Unfortunately, I was in deep custodianship with the Kempitai when the Atom Bombs were dropped and I didn't hear that news on the BBC; it was relayed to me. We didn't keep these

things, of course.
Getting off the technical side now, the radio set didn't betray itself. Some criticism could be levelled at us I suppose. We trusted too many people; we had no intelligence training then, of course, or anything like that and we were inclined to trust every Asian we met who smiled at us and who said he was one of us. Anyway, while this was going on at the aerodrome and once the troops heard, we had to tell the troops the good news of course. We said we had heard from an unknown source that the war is getting better, or something like that - we had to give them a sanitised version. It was probably all they wanted but, naturally, two or three senior officers wanted to know as much as they could because they may be the ones who would have to take some decisions one day about it.
Unknown to us an Indian - I don't like saying this and I'm not being racist, it could have been any nationality - blackmailed a Chinese who was helping us on the aerodrome picking up bits of iron for us and various other things. He blackmailed him but the Chinese wouldn't talk, so the Kempitai arrested the Chinese and put him on a rack; he mentioned in the course of his cries for help - which was not a nice thing to think about but I don't blame him - he mentioned Captain Matthews and a couple of other people; I think I would have done the same thing at that stage.
The Japanese then decided to make a raid on the camp, which they did, and I was then charged and taken away by the Captain; he wanted the receiver and I gave it to him in the end after a lot of leading him round the camp with his soldiers. I could almost laugh at some of the things that happened. He must have told them he was looking for a radio set; a Jap soldier came running up to him with a piece of metal which looked like a piece of horse harness or something; the Captain almost kicked him and told him what to do. So in the end I decided that I couldn't talk to anybody before the rest of the troops on this parade ground, and I felt so conspicuous. He walked back and said "Are you going to tell me because we want the wireless set?", so I said "Yes, I've just thought where it might be". So I went across and told him where the hole was, and they dug the hole up and, of course, there was the transmitter. He said "Ah, you've been sensible at last", so he took the transmitter and they took it away.
>From that day on, I was worried about this because I knew the receiver was OK and the troops would be happy about that; they would still be able to get news. And then he took me up to the platform where he stood and addressed everyone. All he said in English was "You all look at this man, you will never see him again" and led me off. I had a sort of a dying wish, going in on the vehicle to Sandakan to be interrogated, that somehow or other this set could be preserved and, of course unknown to me, it was. They continued using it but not until after about a week or so - their nerves were a bit shaken. But they used it for some months afterwards until the big moves came and it was a successful source of morale lifter.
During the trial, that was when the shock came to me when this transmitter was brought out by the prosecution as evidence that we had been using a receiver, but the Court accepted it. It was never mentioned after that because had it been, I don't think either of us would have been alive, because we had planned to get some crystals from the Philippines and try and fit them in this set then we could call them on CW and give them some news

about ourselves. But we did get some news by other means, via an agent taking a sandalwood vessel across, that the British and Australian authorities knew where we were, and it was proved at the end of the war that they knew exactly where to come for us. They had guerilla parties in behind the lines, but they couldn't contact us and they had to watch some of our people just die virtually, because they were there and there would have been trouble otherwise.
BJ: Could I just take you back and ask you to fill in a few details about the transmitter. You talked a lot about the construction of the receiver and I would be very interested to know where the transmitter fitted in to this; were you developing that alongside?"
RGW: "No, the receiver first; we had that, and then we started the transmitter as a rather low priority of course, but one it would be nice to have. I had finished the two 6L6G's to make a push-pull amplifier that was the RF output to be, and the oscillator, and we had the capacitor but were missing a few more components andthat was about where we were. In other words, in the course of events, had he been an expert with some sort of knowledge of electrical engineering, we would never have got away with two 6L6's sitting up on a block of wood with a few capacitors and things hanging on them, but obviously the Court Martial officers were normal, without disrespect to Infantry Officers, and they had no knowledge of telecommunications.
BJ: Again, the valves you used in the receiver were...?
RGW: Only one, that's all we had, which was brought in by Mr Mabey. He smuggled in a pipe to me, a smoking pipe, with some tobacco. Lovely gentleman. Unfortunately, I never had long with him, he died soon after being arrested. His widow lived at Hove with her sister; the two are deceased now.
End of recording.

I posted that on rec.radio.amateur.homebrew newsgroup a year ago thinking it ought to really spur some interest in bare essentials homebrewing---nobody thought anything of it. It was originally posted at: http://chide.bournemouth.ac.uk/people/r.g.wells.html and was a link from: http://chide.bournemouth.ac.uk/ but they have taken it down.

I am looking for another web site that had the schematic and working
model of the canteen radio that was built in a Japanese POW camp in the
Philippines. I didn't bookmark it and after doing a search to relocate
it I get the feeling that the web site has been removed.

I really would like to learn about the other camp radios and spy sets
that were built and used but information seems to be non-existent. I
saw some of the radios at the Dayton Air Force Museum back in the late
70's and I am sure more information is available but it is probably
tucked away.

There is a military museum, not especially big, in Bayeux, Normandy, with one
or two POW camp radios. Nothing in the museum impressed me more than these
sets. Also, there was one or two in the military museum in Paris. The
descriptions in the museums may have been in French and I didn't understand
completely. I remember that one radio had been built mostly of salvaged
portions of an aircraft radio.

Well, I don't to inculcate any envy, but tomorrow afternoon I'll be taking
the two hour drive to San Luis Obispo for the annual MRCG meet, 5/5 and 5/6.
(Military Radio Collectors Group)

Last year one of the members brought (from the Perham? Museum in the Bay
Area) some truly fabulous and mint WWII Japanese trench radios.

If you are in the neighborhood, stop at Camp San Luis Obispo.

Yep, you heard Jim correctly. Most US military HF gear is USB, such as
the GRC-106, PRC-74 and PRC-47. Most of it also does not go very
high, such as the PRC-47 above that stops at 12 Mhz, so a 40 Meter USB
net was in order.

Subject: WTB FTdx560 VFO and CW filter

Just got a Yaesu FTdx560 (thanks to those who helped me out with advice!!) and will be putting it on SSB and CW as soon as I get my upgrade (yup, at least ONE "new" ham who will use CW!!). I'd really like a CW filter and a VFO for the 560. Also, if you have any accessories for the rig, please let me know condix. and price (& shipping, if possible, to NC). I'll be at the June 10 Winston Hamfest if you're local.

73 de Andy KG4GSC

(For those who helped me...unit was "fair" on reception, some intermittants. Tore into the unit last night. Most of the unit was great...except for some "repairs." More cold solder joints and over-flexed leads than a first year community college electronics class!! Heated up the iron, replaced half a dozen caps and resoldered 30 or so connections....and it came right up!! Listened to 80m & 40m for a while (love those guys on 3952!!) and will try 10/15/20m's this weekend. Next trick is to borrow a friend's dummy load and test the transmitter. "Tune for minimum smoke," right?? <>)

Subject: WTB FTdx560 VFO and CW filter

Good Luck with the New Old rig AND UR Upgrade!!! Glad to see UV taken an interest in CW as it seem to be a dying art these days...Sad really....
As for the Maximum Smoke item, Don't let ALL the Magic Smoke out, the rig needs a little to function correctly!!! :o)

If all else fails, use the large red and black plug-in/screw-on
terminals like on DC power supplys. Mount on small piece of
plexiglas.

Hello Lou,

I have the following Millen HV connectors. Postage is on you, prices are asking
prices:

p/n 37001 NOS in original box - black. Have two (two pairs, each in original
box) $5 per pair

p/n 37001 used, VGC - black. Have one pair. $4 per pair

p/n 37002? used, VGC - red. Have one pair. $4 per pair

Also have two used male connectors, GC. One black and one dark red. $1 each

Have lots of other parts, too.

HP LaserJet 3150 Users... Can You Print Landscape???
&
Try it...
&
OK, neither can I - and neither can a whole lot of other users either.
So far I've identified several here in Usenet, but I'm sure there are
many, many more.
&
I'm attempting to identify as many people as possible with this problem,
so we can approach HP as a group and hopefully get them of their asses and
give us an appropriate firmware revision.
&
The workaround they currently recommend is completely unacceptable, since
it requires you to lower your video graphics acceleration significantly.
This degrades the video capabilities of your entire machine!
&
I don't think so...
&
Please write me at: fairnews@mailandnews.com if you are having
this problem so we can approach HP as a group and hopefully motivate/shame
them into fixing this.
&
I hope to heard from you.
&
Sincerely,
&

From: Jeff Kilgore
Subject: amplifier relay - TS-850 to 30L-1

I need an interface to key a Collins 30L-1 amplifier with a Kenwood
TS-850 to avoid stressing and possibly destroying the relay in the
TS-850. I know I have seen such a circuit before, but I can't seem
to find it right now.

Does anyone have the schematic or a description of a suitable
circuit? One that can be put together with parts from the local

Radio Shack would be a plus, as I could get it going tomorrow.

Thanks and 73,
Jeff, KC1MK

Subject: AudioPhiles Push the Envelope

Most all plugs and jacks that depend on critical long term good connections are gold plated. Just look inside of your computer at the contacts on the plug in cards. "There's gold in them thar things" Some of the cheap cards that can be bought are not gold plated. They cause problems.

Copper migrates through the gold and produces resistive corrosion
granules on the surface of the gold. The nickel coating seals the
copper, to prevent this.
Many good plating processes use nickel as a substrate for this
reason.

Hi Bill

Isn't gold supposed to be applied over copper? Wonder why the component leads were not copper plated first? Maybe I am wrong on that.

Tin is not a good long term material for reliable connections. An accelerated example of that is a solder connection outside where it is exposed to rain and ultraviolet light. The connection will deteriorate very quickly. As your oven burn in showed, the tin corrodes. Good computer boards have gold plated contacts on them so that they maintain good long term contact.

I live in the South Florida coastal area so I know what you are talking about with corrosion problems. It is more severe here than any other place in the country that I know of. Several years ago I had some problems with some mobile antennas that were stainless steel with copper plating and then nickel plating over that. The antennas would turn green in the atmosphere here but no where else in the country would it show up. Turned out to be microscopic holes in the nickel plating allowing the corrosive atmosphere to get at the copper and causing it to bleed through. The fix was a heavier coating of nickel.

Gold shouldn't be plated right over copper. There should be something like
an intermediate nickel plating layer.

I forget the chemical reason for this, but this is how PC board contact
fingers and traces (as with older HP test equipment) are done.

--> Actually, in my experience as long as the connectors are connected, it
doesn't matter a whole lot what they're plated with -- the spring contact
keeps them from corroding. Gold does make a difference while they're
sitting around unconnected, though.

What *does* cause a big problem is if you connect something that's
gold-plated to something that isn't. This can set up galvanic corrosion.
(Hence the suggestion you'll often see that SIMMs with tin-plated contacts
should be used in tin-plated SIMM slots, and ones with gold-plated contacts
should be used in gold-plated slots.)

David Brodbeck, N8SRE dmbrodbe@mtu.edu

David

You are right about the dissimilar metals on contacts causing problems. You will find gold on almost all military and industrial connectors in any equipment that is of critical nature that depends on maintaining good connections. Just because a connector is connected will not stop it from corroding. The parts near the actual connection will start first and creep in toward the connection. If corrosion were only a problem while sitting around not connected, companies like HP, Tektronics and others would not gold plate the connectors inside of their equipment. Gold is expensive. It adds cost to all connectors. For units in storage and not plugged in, they would get coated with a protective film until used.

if you attend a live concert, it is often the case that what
you listen to is electronically reproduced sound through
inferior quality "professional" speakers.

Sencond, it is not true that all persons who choose to spend
$$ on stereo are naieve about electronics -in fact that
statement is just plain false. just because a minimum wage

sales clerk at some consumer store tells you some nonsense don't jump to the conclusion that all high end audio persons would be taken in by such nonsense. If you want to get some idea of the types of discussions, hang out at rec.audio.high-end for a while - you will see both kinds - the persons who swear that painting the edges of their CDs with special green markers makes them sound better, and persons who really understand the intricacies of D/A conversions, circuit design and so on.

to be fair, spending "too much" money on a stereo is really no different than spending "too much" money on an old radio (or several old radios) - in both cases it is a personal choice.

Re a $10K stereo - you can very easily spend 30K on a stereo - just like you can spend anywhere from $50 to $500,000 for a car (beater to new super ferrari or rolls). For the extra money you get some fancy front panels, sure, but you also get better sound. like most things, you are on an exponential curve (1-e^-x) so each additional $ spend buys less total improvement. But anyone will easily hear the difference between a $500 system and a $20,000 system. many will say that it's not worth it - fair enough - some think it is worth it - also fair enough.

And, in constant dollars, what did that really nice Scott receiver with the two chrome chassis cost? it was built just before WWII - if I remember right - and it was not cheap - (anyone know what they sold for?) - when you find out, for comparison, my 1938 plymouth sold for $646. my 1936 cadillac was closer to $6000. I'll bet the Scott cost almost as much as my plymouth. And what was a year's wage for a factory man at that time? I believe you will see that the Scott was the then equivalent of today's high end audio - someone who knows chime in with some real data (and if I picked the wrong receiver, help me out here).

Hi Bill

I do not know about the prices of some of the old Scott equipment etc. I tend to think you are in the ball park on it though. As for today's prices, yes higher dollars do buy you better equipment.

Yes it is very easy to tell the difference in good high end equipment compared to the mid-fi equipment. $2500 will buy a fair sounding system but from that go and listen to a $20,000 system in a high end store. Not too hard for anyone to tell the difference. If any of you out there has a chance to go to the CES show in Chicago where all of the high end hi-fi stuff is, it is well worth the experience. Yes there are a bunch of nut cases running around there but there are a lot of very good sound systems on display. Just set and listen to some for awhile. On some of the really good ones you would swear the music was live if you did not see it wasn't.

Spending a lot of money on a sound system doesn't automatically qualify or disqualify anyone from knowing what they are talking about. Having a ham license doesn't automatically qualify anyone as an electronics expert and knowing all about what is and is not good audio equipment either. There are some very sharp audio buffs out there as well as some very naive ones too. I think some of the hams fall into both of those categories also. Yes there is a lot of BS in the audio business but there is also a lot of very good sound out there for a lot of reasons other than some of the hype.

You are also right about the sound at some concerts. I have been at some where it was so bad I couldn't wait to get out of there. It was not the artist but the sound system was poor. It is a joy to hear a concert with no electronics involved. But when recordings are made usually much more attention is paid to the quality of the equipment that is used and how it is set up and operated to do the recording than the equipment that is used live. For a live concert usually the main concern is to be loud.

It is not too hard to obtain a sound system for home use that has much
better sound than a lot of the live concert stuff.

Actually, despite rumors to the contrary, no. No reproduced sound
will ever sound LIVE to a trained ear. Microphone choice, preamp

design, cable and connector choices all have influence on the
recorded sound, as do the modules of the mixing consoles, and the
recorders used in the process.

Further, multiple miking techniques are as far from the
'authentic' experience as you can get, since the authentic
experience is biphonic from the 1st row or back. Stereo is a
different sonic experience, and also by its nature, and the
production process, not authentic either.

There are a few recordings that are authentic, and accurate, using
two linear microphones, spaced about the width of a human head, with
a dummy head between them, plugged without eq, or limiting directly
into a recorder of extreme linearity. These produce authentic
listening experiences, but only through very high end systems, also
without any trace of processing and only through headphones, because
of the interaural cross talk of the hearing process, and the
interaction of the listening room.

These recordings are low in number, and do not sell particularly
well.

Systems used to reproduce them do not reproduce most other
commercial recordings well, so such reproduction equipment is also
comparatively rare.

Meaning in the final analysis that authentic reproduction is not
the goal. Only an interesting academic curiosity.

Subject: FS: NICE Heathkit SB-310 SWL receiver with all filters

Hello all,
I have a VERY nice SB-310 SWL receiver for sale. It covers 3.5 - 4.0,
5.7 - 6.2, 7.0 - 7.5, 9.5 - 10.0, 11.5 - 12.0, 14.0 - 14.5, 15.0 - 15.5,
17.5 - 18.0, and 26.9 - 27.4 MHz. It has the standard 5.0 KHz AM filter
plus the optional SSB and CW filters. It works very well and looks great.
Ths case on this radio is outstanding! I haven't found one scratch or chip.
The worst fault I can find is someone apparently waxed the "HEATHKIT" badge
just above the main tuning knob and it is somewhat scratched. Check out the
photos at the links below. A prior owner put his drivers license number and
SSN on the back of the chassis but this is out of sight. This is a good
looking, working example of the hard to find SB series SWL receiver. I also
will include the original Heathkit manual. Asking $300 plus shipping from
Stuart, Florida 34996. I can accept credit cards through Paypal. I would
possibly consider trades for working SB series stuff.

Subject: Info needed: Stabilidyne Receiver made by CSF

Hi,

a few weeks ago I picked up a French made STABILIDYNE receiver (2-30 Mc)
with separate power supply made by CSF (Companie Generale de Telegraphie

sans Fils).
This receiver is a monster boatanchor made with 20 American 7-pin and
9-pin miniature tubes. Its olive paint tells me that it was probably
used by the French military in its former live.

The receiver and power supply have a schematic inside the lid but I
would appreciate to get a complete manual. The power supply is missing a
ballast tube. The marking on the other tube is 25/75 V 0 A 4-433.
Anybody has one of those? I also need the two connecting cables (or at
least the strange round connectors) between the power supply and the
receiver.

I appreciate any help to get this monster working again.

From: "David L. Stinson"
Subject: Old Small Parts Still Disappearing

I just got back from the Belton, Texas hamfest. I'm concerned
about a trend that's been getting worse in recent years.
There is a near total lack of "dirty old boxes" full of dusty,
grundgy and useful old parts.

Used to be, you could find one or ten dirty old boxes full of
face plates, resistors, knobs, clipped-out doo-hickeys and
de-soldered thing-a-ma-bobs under every table.
Now, you rarely see more the two or three at the whole meet.
If you like to work on old radios, you found the "jewels"
you needed to finish your projects in these boxes.
The bits and pieces for restorations could almost always be found
if you got down there face-first in those dirty'ol boxes and dug.
This is becoming a serious drought as more and
more fellows move to "the other side of the grass"
and their kids throw the irreplaceable small parts in the trash.

Please, guys- Talk this up at your meetings.
Those small parts for restorations are getting impossible to obtain.
Please tell your kids to call somebody- anybody, to come
get "that old junk" rather then toss it in the dump.
And please, when they do call, take a little time to go
and get the stuff. You'll be a hero to guys who need
those doo-hickeys.

Kind Regards,
Dave S.

Subject: TS-520S - IS $265 a good offer?

Hello! I found a TS-520S on the web for $265 in good shape. I wondered if
that is a good buy (parts still available, could still be repaired if
needed, etc..). This would be my first rig, and I would rely on it to get
into the hobby.

Thanks,
Tony

Date: 30 Apr 2000 01:38:58 GMT
From: yardleyite@aol.com (Yardleyite)
Subject: TS-520S - IS $265 a good offer?

Tony,
If the TS-520 is clean cosmetically and in good condition electrically (
final tubes have good emission ie: 80 watts out on 10 meters, 90-100 out on the
other bands) it's a fair buy.
The Kenwood TS-520 was a real good reliable rig. For $265.00 you should get
many qso's out of it if it's properly taken care of.
Good luck and 73.

Subject: WTB:Motor Generator

I'll keep an eye out for such a beast for ya.....can't help wondering
though why you wouldn't run that 120vac 1kva alternator off of the prime
mover (engine) that would be required to run the substantial
generator/alternator required to keep the battery bank charged....as you
drew 90+ amperes from it at 1000va output. Sometimes we don't see the
whole picture in a news post though so I'll take your word on the
requirements as such.

From: "Peter Gottlieb"
Subject: WTB:Motor Generator

There are lots of solid state inverters out there that are quiter and more
reliable than motor generators. Do you need a sine wave? Stepped wave
inverters are more efficient. How about zero-load input current draw? Some
solid state units will draw very little if you shut off the load, motor
generators can still draw significant current.

Other than cosmetics, the primary difference was the presence or absence of
the 12 VDC module (standard with the 520, optional with the 520S, and not
avalilable with the 520SE). I don't remenber the other differences.

DATAK is alive and well, I'm looking at the catalog now. They now have a set of ham radio sheets (2 different sets). The p/n for the ham sets are:K95B (black), K95W (white). The updated ham sets are: K70B and K70W. The old standby markings are the 948 and 949. Look under LKG Industries Co. Datak Div.
Here in MD, I use Mark Electronics (stocking dealer) 301-595-5040. They're OK people. de K3HVG

I've been told this is the approprite place for this sort of thing.

Today I bought a peice of interesting looking equipment bearing this label:

```
+---------------------------------------+
|SIGNAL CORPS U.S. ARMY|
| FREQUENCY METER TS-175/U |
| 85 TO 1000 MEGACYCLES |
| SERIAL NO. 62 ORDER NO. 90-DAY-45 |
| MADE BY |
|THE ALLEN D. CARDWELL MANUFACTURING CORP.|
+---------------------------------------+
```

Mr. Alan Douglas told me that this was used for calibrating radio transmitters, and it was contracted for in 1945.

Can anyone tell me anything more about it, such as how many were made, if it has any value, if it would be worth getting running again, or any other information whatsoever?

Thanks,

Ben Brockert

Hi Bob:

Have seen a few ads for the Viking II. I have one but did nt respond because I thought you would get a nice offer.

But, if you have not got anything and are desperate - - - I have a Johnson II CD model. This model was the latest and has at least one extra tube, a cadmium plated chassis and a CD sticker on it. It worked continuously from 1.8 to 30 mhz. The problem is that the County that had it for CD stored it carelessly so that the case and front panel is badly scratched. However, you could have it repainted and silk-screened. I think there is a guy who does that for something like $200 or so. All the knobs are nice so with the paint and silkscreen it would be first class.

The NC-183D is a great radio and you will probably get a nice offer to trade.

I live in Newberg, OR.

I was always going to restore it, but I first restored a Viking I and I love it. so the 1 will probably be my 100 watt am rig.

1744. Wanted HRO-7 Power Supply, coils

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-06 00:00:00 UTC
From: nvanvonno@aol.com
Message-ID: <20000505221149.24309.00001526@ng-cd1.aol.com>
Source record: 66999

Hello Boatanchor fans,

Looking for a power supply for my HRO-7, which is the National model 697. Now running on a homebrew which works very well but the correct supply would be nice.

I've come a long way with this set since it emerged from eBay, but could use some service literature on the crystal filter though as the factory manual is not real specific about some of the trimmers.

Also looking for the C, E and F coil sets for the same radio. Drop me a note, thanks, and let's talk.....would enjoy hearing from you National fans out there. Respond to <nvanvonno@aol.com> or <nvanvonn@intersil.com>, either one will work.

thanks,

nvv

1745. FT 101EX manual PG 11

FS: Gonset Commander AM/CW transmitter vintage about 1960. In good condition with documentation / photo copies. This was Gonsets mobile transmitter so its fairly small. Has 1 or 2 band coils with it that plug in behind little door on the front panel. Will run 80-6 meters. You need small external power supply for it. Price $150.00 I have too many projects so Im letting some gear go. My ART13 is almost ready to put on the air!! 73s Lew-KlNDV

1756. Please don't take offense at this

Source record: 67011

If you're easily insulted, please don't go further.

In surfing the net and doing a search for "tube", I came across this web page, and truthfully I find it hard to believe that any radio afficianado cold do such as thing, but in 1986 it was reported in the medical journal SURGERY MAGAZINE that there were 6 instances of people inserting a tube rectally. Now this is only those who went to hospitals, so I'm sure the incidence is much higher. Some of these are no doubt weirdos, but what does this suggest about boatanchor types?

See: http://www.well.com/user/cynsa/newbutt.html#figs

From: yardleyite@aol.com (Yardleyite)
Subject: Clegg Venus 6M SSB/SS-Booster/Power Supply/Speaker Station

I have a complete Clegg Venus 6M SSB station including the SS-Booster speech
processor, and power supply/speaker combo, and the original Clegg torquoise
hand microphone. Everything is in excellent condition, the radio puts out
around 50 watts from a single 12V version of a 6146B (just replaced).
The original Eddystone dial works great and the receive sensitivity is fine.
This radio uses Nuivistors in it's front end. AM and CW operation are also
good.
The paint is a little faded on top of the radio and power supply. Otherwise
everything is excellent. I have a copy of the manual for the radio and the
SS-Booster. I have all of the interconnecting cables as well.

I'd prefer not to list this on ebay. The last one I saw there fetched over
$500.00 for the radio alone without a power supply or the SS-Booster speech
processor or mike. I'm asking $600.00 plus shipping for the whole station.

If you want to catch some of the terrific E-skip this season on SSB/CW or want
to work AM on 50.400 with broadcast quality audio - here's a chance to do it
with something other than a Yaecomwoods out of the box radio. It's probably one
of the rarest Clegg's made that you can still operate every day.

I recently upgraded my license and prefer to concentrate my operate time on the
lower bands.

Thanks for reading this message and 73.
Joe

Subject: Wanted HRO-7 Power Supply, coils

Hello Boatanchor fans,

Looking for a power supply for my HRO-7, which is the National model 697. Now running on a homebrew which works very well but the correct supply would be nice.

I've come a long way with this set since it emerged from eBay, but could use some service literature on the crystal filter though as the factory manual is not real specific about some of the trimmers.

Also looking for the C, E and F coil sets for the same radio. Drop me a note, thanks, and let's talk.....would enjoy hearing from you National fans out there. Respond to or , either one
will work.

thanks,

nvv

From: w7wjm@arrl.nospam.net
Subject: what is the diff in these rigs??

Other than cosmetics, the primary difference was the presence or absence of the 12 VDC module (standard with the 520, optional with the 520S, and not avalilable with the 520SE). I don't remenber the other differences.

Hi and thanks for reading this.

For Sale: Just in time for the upcoming VHF Sweepstakes!

Yaesu FT726R, VHF/UHF transceiver.

The radio has a built in AC supply, will run off 12 volts, and puts out 10W on all bands. Includes SSB, CW and FM. 10 memories, repeater offsets, full duplex, scan functions, IF shift, etc. This radio is in near mint (I would consider it a 9+) condition and includes the following accessories:

6M Module
2M Module
430-440 Module
Satellite Duplexer
CW Filter
Manual
Service Manual

Asking $700.00 or best offer, complete with all accessories. Sorry, I will not break up the until the rig is sold!

Dear All,

You're invited to the Antique Radio Collectors & Historians of St. Louis Spring Swapmeet/Picnic at Paul Schroeder Park in West St. Louis County on Sunday, May 28th, 2000!

Swap begins at 9:00 a.m. Lunch served starting at 11:30 a.m. Visitors are welcome and encouraged to bring items to swap! Swap is planned for the parking lot. In case of inclement weather, swap will be held inside the pavillion. We'll do it rain or shine!

No Swaptable fee. Please bring your own swaptable. A $3.00 donation is requested to cover the cost of the picnic.

Partial List of Activities:

Swapmeet of Radio/TV/Antique Electrical Apparatus

Raffle of Radio & Radio-related items

Barbecue Pot-Luck Lunch (please bring a dish)

Antique & Classic Radio Demonstrations

For detailed directions, etc., please visit our picnic web page at:

http://home.stlnet.com/~keymaster/arch/spring_picnic.html

...or e-mail me at keymaster@stlnet.com

Thanks!

Nothing really. It doesn't suggest anything more about 'Boat Anchor
Types' than the 7 instances of light bulbs in the rectum suggest about
people that use light bulbs or the perfume bottle incident(s) suggest
about people that use perfume / cologne.

Of course! Just trying to get a rise out of these guys, that's all. Sounds pretty dumb to me, but the dumbest thing I found (following the links on that page) was a guy who inserted a frozen fish, but as it thawed, the fins (or something) became loose and prevented its removal.

It takes all kinds...

Maybe you can tell us what the limit of the arr preamp switch would be?
I may be interested if its over 100 watts.

1789. Clegg Venus 6M SSB/SS-Booster/Power Supply/Speaker Station

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-06 00:00:00 UTC
From: yardleyite@aol.com
Message-ID: <20000505205724.08500.00001400@ng-cs1.aol.com>
Source record: 67090

I have a complete Clegg Venus 6M SSB station including the SS-Booster speech processor, and power supply/speaker combo, and the original Clegg torquoise hand microphone. Everything is in excellent condition, the radio puts out around 50 watts from a single 12V version of a 6146B (just replaced).
The original Eddystone dial works great and the receive sensitivity is fine. This radio uses Nuivistors in it's front end. AM and CW operation are also good.
The paint is a little faded on top of the radio and power supply. Otherwise everything is excellent. I have a copy of the manual for the radio and the SS-Booster. I have all of the interconnecting cables as well.

I'd prefer not to list this on ebay. The last one I saw there fetched over $500.00 for the radio alone without a power supply or the SS-Booster speech processor or mike. I'm asking $600.00 plus shipping for the whole station.

If you want to catch some of the terrific E-skip this season on SSB/CW or want to work AM on 50.400 with broadcast quality audio - here's a chance to do it with something other than a Yaecomwoods out of the box radio. It's probably one of the rarest Clegg's made that you can still operate every day.

I recently upgraded my license and prefer to concentrate my operate time on the lower bands.

Thanks for reading this message and 73.
Joe

1804. Vacuum tubes for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-07 00:00:00 UTC
From: petee100@aol.com
Message-ID: <20000507091029.05653.00001708@ng-co1.aol.com>
Source record: 66961

I have about 550 vacuum tubes for sale. 90% are RCA, new and unused. The rest are slightly used and/or other brands. The list below shows the models available. The digit after the model indicates the quantity available.

Send me email at petee100@aol.com if you have an interest in purchasing these tubes. I would prefer to sell the whole lot rather than in bits and pieces but if you're interested in a few specific units let me know and we might be able to work something. Thanks.

Pete Enghauser, N4ACQ
Herndon, VA

Subject: FS: ARR 6 meter Preamp

Thanks for reading this:

For sale: ARR 6 meter preamp. This is the RF switched preamp, model
SP50VDG. Works fine, with documentation.

I bought a new radio and it's output is beyond what the rf switch can handle
is the reason for selling.

Price $25 + $5 shipping.

Maybe you can tell us what the limit of the arr preamp switch would be?
I may be interested if its over 100 watts.

Subject: FS: Yaesu FT726R VHF/UHF Allmode

Hi and thanks for reading this.

For Sale: Just in time for the upcoming VHF Sweepstakes!

Yaesu FT726R, VHF/UHF transceiver.

The radio has a built in AC supply, will run off 12 volts, and puts out 10W on all bands. Includes SSB, CW and FM. 10 memories, repeater offsets, full duplex, scan functions, IF shift, etc. This radio is in near mint (I would consider it a 9+) condition and includes the following accessories:

6M Module
2M Module
430-440 Module
Satellite Duplexer
CW Filter
Manual
Service Manual

Asking $700.00 or best offer, complete with all accessories. Sorry, I will not break up the until the rig is sold!

Subject: NC183D trade for an AM Transmitter

Hi Bob:

Have seen a few ads for the Viking II. I have one but did nt respond
because I thought you would get a nice offer.

But, if you have not got anything and are desperate - - - I have a Johnson
II CD model. This model was the latest and has at least one extra tube, a
cadmium plated chassis and a CD sticker on it. It worked continuously from
1.8 to 30 mhz. The problem is that the County that had it for CD stored it
carelessly so that the case and front panel is badly scratched. However,
you could have it repainted and silk-screened. I think there is a guy who
does that for something like $200 or so. All the knobs are nice so with the
paint and silkscreen it would be first class.

The NC-183D is a great radio and you will probably get a nice offer to
trade.

I live in Newberg, OR.

I was always going to restore it, but I first restored a Viking I and I love
it. so the 1 will probably be my 100 watt am rig.

If you're easily insulted, please don't go further.

In surfing the net and doing a search for "tube", I came across this web page,
and truthfully I find it hard to believe that any radio afficianado cold do
such as thing, but in 1986 it was reported in the medical journal SURGERY
MAGAZINE that there were 6 instances of people inserting a tube rectally. Now
this is only those who went to hospitals, so I'm sure the incidence is much
higher. Some of these are no doubt weirdos, but what does this suggest about
boatanchor types?

Nothing really. It doesn't suggest anything more about 'Boat Anchor
Types' than the 7 instances of light bulbs in the rectum suggest about
people that use light bulbs or the perfume bottle incident(s) suggest
about people that use perfume / cologne.

Of course! Just trying to get a rise out of these guys, that's all. Sounds pretty dumb to me, but the dumbest thing I found (following the links on that page) was a guy who inserted a frozen fish, but as it thawed, the fins (or something) became loose and prevented its removal.

It takes all kinds...

From: latebird@usa.net (Wikkit)
Subject: U.S. Army Frequency Meter

I've been told this is the approprite place for this sort of thing.

Today I bought a peice of interesting looking equipment bearing this label:

```
+----------------------------------------+
|SIGNAL CORPS U.S. ARMY|
| FREQUENCY METER TS-175/U |
| 85 TO 1000 MEGACYCLES |
| SERIAL NO. 62 ORDER NO. 90-DAY-45 |
| MADE BY |
|THE ALLEN D. CARDWELL MANUFACTURING CORP.|
+----------------------------------------+
```

Mr. Alan Douglas told me that this was used for calibrating radio
transmitters, and it was contracted for in 1945.

Can anyone tell me anything more about it, such as how many were made, if
it has any value, if it would be worth getting running again, or any other
information whatsoever?

Thanks,

Ben Brockert

Subject: WTT: NC183D trade for an AM Transmitter

I would like to find a Johnson Viking II, Valiant or 500. I have a very
clean NC183D. Just recapped and aligned. Really in nice shape. What do
you have to trade? Will also buy outright if you are not interested in the
NC183D.

From: "Hamish"
Subject: WTT: oddball (to me) tubes.

I have 2 of 4X150A tubes, (Eimac, USA) 1 of 6883, 2 of OC3, 1 of 80 and one
marked 6DQ68/6GW6 which I don't have a clue what it is. Pulls from an old
telephone co. something or another. Don't have the facilities for testing,
but filaments have continuity (on those that have filaments)
Any use for these anybody? (or are they of any use for anything?)
I need some OA1's.
Hamish.

Source record: 66966

For sale, brand new, steatite antenna insulator. Can be used for that monster antenna or as a conversation piece or paperweight. You don't see these very often! White color, about 7.25 inches long, 1 and 5/8 wide, and 1 1/8 thick. Hole in each end about 3/8 inch diameter. Will sell for $3 and whatever the shipping costs will be. I have more than one if you'd like some as gifts. You won't flash this one over no matter how much power you run!

1827. FS: Heavy duty rotor& control

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-07 00:00:00 UTC
From: Mike Linger <gspubl@tca.net>
Message-ID: <shbrs94iqil102@corp.supernews.com>
Source record: 66984

FS: I have a killer hair-monger antenna rotor that resembles the Telex geardrive type. It was built by Wilson and the rotor part is quite heavy. It has the control head and works just fine. It is so powerful that it was found at a car dealership rotating the display car table. The display unit doesn't look that great and would need re-painting. The limit switch on the rotor was obviously disconnected for continuous rotation. I want $100 for it all.......Mike.

1834. HT-32 Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-07 00:00:00 UTC
From: Mark Bell <bellfamily@supernet.com>
Message-ID: <b5rR4.3896$eA.372892@nntp2.onemain.com>
Source record: 66991

Did Hallicrafters make two different variants of the HT-32 Mark I ?

I'm working on an HT-32, and the factory ID card on the back chassis says HT-32 as does the front panel. However, inside it's stamped "B Mark I" with 199828 beneath it.

I purchased a parts radio just recently that is stamped, on the inside "299924 A" with "Mark I" beneath. This chassis is greatly gutted, but the back has two different items of interest. The first is a two prong plug (like the fan plug on the chassis top) labled "AC Outlet 2 Amp Max". The second is a 1/4 Phone type jack labled "FSK". The rear AC outlet is stock, and the FSK label looks original also.

Both are stamped Mark I on the insides!

Any ideas?

Also, I'm not able to download the HT-32 Mark I photos and the HT-32 A photos from the HCA site. Is the front panel of an HT-32A labled HT-32A?

Thanks

Mark K3ZX

On 6-May-2000, latebird@usa.net (Wikkit) wrote:

Here is what my 'master index file' says for TS-175/U
hope it helps you somewhat...

85 to 1000 Mc - battery operated
oscillator fundamental freq. is 85 to 200 Mc
uses 6Vdc and 135Vdc
has audio modulation of 1000 Hz
(it is sort of a VHF BC-221..) Tech. manual is TM 11-5050

An ad from back in the 1960s for this unit said:
"Portable, crystal controlled heterodyne type unit used in field
testing of CW or MCW RF Transmitters and signal generators."

In 1963 Selectronics sold them for $175
In 1963 Columbia Electronics sold them for $135
In 1964 Barry Electronics sold them for $145
In 1963 Thermo sold them for $67.50
In 1964 Slep Electronics sold them for $60

Unfortunately, my 'master library' does not have a copy of TM11-5050.

1841. FS: British WWII Spitfire morse key

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-08 00:00:00 UTC
From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <8f6049lga1@mailint03.im.hou.compaq.com>
Source record: 66849

I have a W.W.II British Air Ministry Morse key for sale.

The key is labeled: AM Type B. Ref No5c/372 Switchbox
Identification. It was used on the Spitfire but also on other planes of those days. It was used to key the Navigation and/or Landing lights for identification purposes when radio was not available or not allowed. The key is made of Bakelite, round, 3.5" in diameter and 1" thick. The key protrudes out of the front just below two lever switches marked Downward and Upward respectively. The switches have three positions: Morse, Off and Steady. The key is in very good condition and I doubt if it is ever been installed. The knob of the key is made of copper or bronze or something like it and the paint came of a bit, but that can be restored in 5 minutes. Should you be interested, I'm asking 75 US$ or 50 UKP, shipping cost from Holland will be 15$ to the US and 7 UKP to the UK.

I have a picture of the Key available that I can Email.

From: "Mike Linger"
Subject: FS: Heavy duty rotor& control

FS: I have a killer hair-monger antenna rotor that resembles the Telex geardrive type. It was built by Wilson and the rotor part is quite heavy. It has the control head and works just fine. It is so powerful that it was found at a car dealership rotating the display car table. The display unit doesn't look that great and would need re-painting. The limit switch on the rotor was obviously disconnected for continuous rotation. I want $100 for it all.......Mike.

From: k9sqg@aol.com (K9SQG)
Subject: FS: insulator or paperweight

For sale, brand new, steatite antenna insulator. Can be used for that monster antenna or as a conversation piece or paperweight. You don't see these very often! White color, about 7.25 inches long, 1 and 5/8 wide, and 1 1/8 thick. Hole in each end about 3/8 inch diameter. Will sell for $3 and whatever the shipping costs will be. I have more than one if you'd like some as gifts. You won't flash this one over no matter how much power you run!

From: "Mark Bell"
Subject: HT-32 Question

Did Hallicrafters make two different variants of the HT-32 Mark I ?

I'm working on an HT-32, and the factory ID card on the back chassis says HT-32 as does the front panel. However, inside it's stamped "B Mark I" with 199828 beneath it.

I purchased a parts radio just recently that is stamped, on the inside "299924 A" with "Mark I" beneath. This chassis is greatly gutted, but the back has two different items of interest. The first is a two prong plug (like the fan plug on the chassis top) labled "AC Outlet 2 Amp Max". The second is a 1/4 Phone type jack labled "FSK". The rear AC outlet is stock, and the FSK label looks original also.

Both are stamped Mark I on the insides!

Any ideas?

Also, I'm not able to download the HT-32 Mark I photos and the HT-32 A photos from the HCA site. Is the front panel of an HT-32A labled HT-32A?

Thanks

Mark K3ZX

On 6-May-2000, latebird@usa.net (Wikkit) wrote:

Here is what my 'master index file' says for TS-175/U
hope it helps you somewhat...

85 to 1000 Mc - battery operated
oscillator fundamental freq. is 85 to 200 Mc
uses 6Vdc and 135Vdc
has audio modulation of 1000 Hz
(it is sort of a VHF BC-221..) Tech. manual is TM 11-5050

An ad from back in the 1960s for this unit said:
"Portable, crystal controlled heterodyne type unit used in field
testing of CW or MCW RF Transmitters and signal generators."

In 1963 Selectronics sold them for $175
In 1963 Columbia Electronics sold them for $135
In 1964 Barry Electronics sold them for $145
In 1963 Thermo sold them for $67.50
In 1964 Slep Electronics sold them for $60

Unfortunately, my 'master library' does not have a copy of TM11-5050.

From: petee100@aol.com (PeteE100)
Subject: Vacuum tubes for sale

I have about 550 vacuum tubes for sale. 90% are RCA, new and unused. The rest
are slightly used and/or other brands. The list below shows the models
available. The digit after the model indicates the quantity available.

Send me email at petee100@aol.com if you have an interest in purchasing these
tubes. I would prefer to sell the whole lot rather than in bits and pieces but
if you're interested in a few specific units let me know and we might be able
to work something. Thanks.

From: Patricia Gibbons
Subject: [FA] NCX-3 in original box, w/ manuals, matching ser#'s

This NCX-3 was acquired about a year ago, and I have
too many radios already .. This radio appears as new
and has the matching power supply, original boxes,
manuals, and an Electrovoice Model 600D microphone
that is also New-Old-Stock, in the original box,
and never had a mic connector on it..

I put this rig on the air and used it on CW for a while.
I also left it running during the day for a few days
to see if it would develop any power supply problems
and it ran fine.. I never used it on SSB however..

> right?)

--> Not really. In the 1960's, even, a base model car meant no radio, a
manual transmission, power nothing. Nowadays even base model economy cars
often have power brakes, an AM/FM stereo radio, air conditioning, and an
automatic transmission.

From: "Bill Noble"
Subject: AudioPhiles Push the Envelope

the plymouth to which I referred was a 1938 p-6 which cost
$646 according to the catalog. don't remember if that
included a radio, but it certainly weighed more than a modern
equivalent - after all it had a frame and real iron parts -
about the only plastic is the steering wheel itself, and I
suppose that's really hard rubber.

anyway, the direction I thought would be interesting to
explore is the "tweeks" done in the 20s and 30s for "high end
audio" - today we find things like special green marking pens
to draw around the edge of a CD, and special power cords (or
my favorite, a $150 power outlet). Rather than debate whether
these things work - rec.audio.high-end takes care of that
debate, how about talking about equivalent "fringe" things
done in the time of the radios that this group discusses.

Subject: FA: Hammarlund HQ-180C

For Auction:
Hammarlund HQ-180C. Working original clock. Repro manual/service manual.
Good condition overall. If you don't mind the incorrect tuning knobs on the
main and bandspread this one's for you. Loose knob on the U/L sideband
switch. This unit has the Hammarlund vernier tuning mod, so that's a plus.
Front panel and cabinet good, could use a little TLC via a nice (soap or
solvent of your choice) cleaning. Otherwise working and good audio.
